One of the first speakers was John Nailor. He seemed to have something on his mind and wanted to get it out as soon as he could. He jumped into the question of bookkeeping from the very first, dealing particularly with "overhead costs," and before he got through, the others sitting about the table were thinking good and hard. There was hardly anyone outside of Nailor himself who seemed to have very much to offer along this subject. One or two hardly knew what "overhead" meant, and when it came to actual bookkeeping it was a wonder to John Nailor that they knew anything about their business at all. In fact few seemed to have clear understanding as to what sort of bookkeeping records should be kept, either in their hardware store or out in the plumbing shop.

It was finally decided to get the opinions of plumbers in other towns and as a result of information received, John Nailor and the other hardware men finally drew up and adopted for

Digitized by Google

their own use an "overhead cost sheet" containing items here shown. It contains thirty-nine items covering practically every indirect expense connected with the operation of the plumbing business jointly with a hardware store.

OVERHEAD COST SHEET

1 License on Bond
2 Taxes
3 Rent
4 Owner's Salary
5 Office Help
6 Stationery and Printing
7 Postage
8 Bad Accounts and Allowances
9 Collections
10 Lawyer
11 Light, Heat, Power, Water
12 Foreman
13 Truck Driver
14 Stock Man
15 Telephone and Telegraph
16 Expense of Horse
17 Expense of Wagon
18 Expense of Truck
19 Office, Shop and Store Equipment
20 Tool Repairs
21 Insurance on Stock
22 Insurance on Horse and Truck
23 Liability Insurance
24 Labor Not Chargeable
25 Depreciation
26 Damaged Material
27 Traveling Expens:—
Conventions, Soliciting, Buying.
28 Incidental Expense
29 Workmen's Compensation Ins.
30 Candles, Matches, Etc.
31 Oil
32 Paint and Dope
33 Gasoline
34 Advertising
35 Trade Papers
36 Good Fellowship and Gifts
37 Association Dues
38 Interest on Capital
39 Interest on Borrowed Money
Total Overhead

There was quite a change in the attitude of the hardware men after this overhead cost sheet had been used for a time. It proved to them their old methods were leaky through and through and that they had overhauled their accounting system just in time.

Besides adopting an entire new system of plumbing records, these hardware men were also shown the faulty spots in their store bookkeeping and set about at once to remedy the defects. In other words they braced up their business by adopting suitable figure records that showed them how they stood financially from day to day. They regulated buying, looked closer to turnovers and are now able to show profits where before they were doing well to break even.

---

When your customer has found what he wants, stop showing any other varieties of goods or you will confuse him and perhaps cause him to decide to wait and come again another day.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

A·G·M·CO. VIKO ALUMINUM

## *Always Dependable —A Money-Maker*

The modern housewife's marked preference for aluminum cooking utensils is easy to understand. Aluminum is light in weight, therefore easy to handle. It is tough, durable, and neither chips nor cracks. Moreover, it is an excellent conductor of heat.

But the modern housewife wants aluminum ware that is sturdily constructed and well designed, a *branded* ware that she can identify when she wants to buy again. Thousands are asking for VIKO, The Popular Aluminum — first, because Viko gives perfect satisfaction in use; second, because Viko is popular in price.

*You* can make money on Viko.

*Ask Your Jobber*

Aluminum Goods Manufacturing Company
General Offices: Manitowoc, Wisconsin, U. S. A.
*Makers of Everything in Aluminum*

# VIKO

## The Popular Aluminum

**WANTED**

Experienced general hardware road Salesman. Age about 30. State experience and record. Drawing account and bonus. Eastern Washington. Splendid opportunity for right man. Address XYZ, care HARDWARE WORLD.

**FOR SALE**

**A general merchandise business in the best irrigated valley in Nevada, has been established for 10 years, and is a money maker. Stock will run $25,000 to $30,000; did over $80,000 business last year. Owner wishes to retire and will sell at inventory price. Business includes $7,000 gents' furnishing and dry goods, $6,000 groceries and the balance in hardware, paints, plumbing supplies. Address Nevada, care HARDWARE WORLD.**

**UNUSUAL OPPORTUNITY**

First-class hardware man with about $5,000.00 capital can purchase half interest in a hardware store and be actively employed in its management. Store now being operated in connection with a lumber yard, but to be incorporated and run in a separate building by itself. Splendid location in a growing community in one of the best sections in So. Calif. Add. C. L. B. W., care HARDWARE WORLD.

**FOR SALE**

A new clean stock of Hardware and Household Utensils, all less than two years old. A good assortment of salable goods and up-to-date fixtures bought at the right prices. Stock and fixtures will amount to about $20,000.00.

In very best business location in the city. In the most prosperous city of southern Arizona, with a population of over 20,000. A good opportunity for anyone to get into a hardware business.

Reason for selling is that owner wants to reduce his business responsibilities as he has other interests to look after. Add. "Arizona," Care HARDWARE WORLD.

**FOR SALE**

A first class, clean hardware stock for sale in one of the best towns in North Dakota, situated on the main line of the N. P. R. R. Population 1500; good schools and churches. Stock of $10,000.00; store in the heart of the city; fire-proof building. A money maker for a live wire. Address N. D., care HARDWARE WORLD.

**WANTED—SALESMAN**

Want responsible Sales Organization or individual representative covering retail Hardware and Paint Stores in Washington, Oregon, Idaho and Montana. Excellent opportunity for attractive side line. Established factory product of merit and reputation. References required and given. Address Burnett Chemical Company, 421 West 18th Street, Los Angeles, California.

**WANTED**

Young man wanted who is willing to learn the Automotive Equipment business from the wholesale basis. We want a good live young man to take care of our catalogue department, who wants to make himself useful and who would like to learn the business in all its details. Address Automotive Equipment, care HARDWARE WORLD.

## GENERAL HARDWARE AND IMPLEMENT BUSINESS FOR SALE

Established and paying well. In livest town in San Joaquin Valley, and exceptionally good location. Stock consists of general line of builders' hardware, kitchenware, automobile supplies, paints and oils. Some valuable exclusive agencies. Write Box 638, HARDWARE WORLD.

**FOR SALE CHEAP**

50,000 prs. 2x2 and 2½x2½ tight pin sheradized steel butts; 60,000 4½-in. Hinge Hasps. Union Steel Spec. Co., 5605 Wayne, Chicago.

**SALESMAN WANTED**

Hardware salesman for central California point with population of 1500. Address C. G. F., care HARDWARE WORLD.

**FOR SALE OR LEASE**

Rolling Mill complete. 8, 10, 16 and 18 inch Mill for rolling steel and iron. Best reason for selling. With or without real estate. A chance of a lifetime. Address Box 43, care HARDWARE WORLD.

**FOR SALE**

The best paying Hardware and Implement business in Fresno County, California. We make this statement with the full knowledge that such an assertion sounds broad, but evidence will be available to really interested parties. Address Hardware, care HARDWARE WORLD.

**SALESMAN WANTED**

High grade salesman calling on wholesale and large retail trade in Oregon and Washington to sell several leading factory lines, on commission. Socket Wrenches, Electric Lamps, Blow Torches, Towel Bars, Metallic Gas Tubing, Automobile Tubes, etc. Good opportunity for the right man. Add. H. G. E., care HARDWARE WORLD.

**POSITION WANTED**

**As assistant manager or director of a housefurnishing department in a retail or department store is the position I would like. Nine years' experience should be sufficient to guarantee my ability to fill the position. Twenty years as a road man, visiting this same trade, has kept me in touch with the line specified. Salary no particular object, but a living remuneration expected for my services. Address G. S. H., care HARDWARE WORLD.**

**FOR SALE**

Hardware Store, clean up-to-date stock hardware and household utensils. One of the best locations in San Francisco. Excellent lease, cheap rent. Ten to twenty thousand will handle. Address T. K., care HARDWARE WORLD.

**FOR SALE**

Hardware, Electrical and Sporting Goods store. Established 38 years in one of the busiest growing sections of San Francisco. Owner wishes to retire. Bargain for cash buyer. Address Box 2744, care HARDWARE WORLD.

**EXECUTIVE WANTED**

An established wholesale heavy hardware company, located in a Western State, wants a man with either office or traveling experience in the line. Must be willing to cooperate with the other two members of the firm actively interested. The business is excellently located in a proven field. The opening requires a man ready to enter business for himself and A1 associates. The position requires and justifies an investment. Address M. F. G., care Hardware World.

**WANTED — HARDWARE SPECIALTIES**

We can give due consideration to selling Hardware Specialties to the trade on a commission basis. Address Starks Mfg. Co., 325 13th St., Oakland, Calif.

**FOR SALE**

**Hardware Stock in good town 100 miles from Spokane. Invoice $6,000. Write for particulars. Address H. B. R., HARDWARE WORLD.**

**FOR SALE: 200,000 feet galvanized screen wire. Full rolls, widths 18 to 48 inches, 14 and 16 mesh.**
**Curry Fly Trap Company, Tulsa, Okla.**

**WANTED**

**Party with $15,000 or $20,000 cash to invest in established jobbing business in California, to take active part. Must give good references. Box 409, HARDWARE WORLD.**

**TRADE RHYMES $1.00**

**Any advertiser can have a three verse trade rhyme or five two-line slogans sent them on approval by investing $1.00. Send any suggestions or circulars to (Reegtherhymer) H. Summer Geer, Studio No. 62, 209 Dyckman St., New York City. Suggestions selected and used $1.00 each.**

**FOR SALE**

**Only exclusive Auto Accessory and Tire Store in one of the best county seat towns in the San Joaquin Valley, Calif. All new stock, good fixtures and good lease. Family affairs demand that present owner return East. Invoice about $7,000. Address Forced Sale, care of HARDWARE WORLD.**

**SYSTEMATIZE YOUR STOCK BINS**

Bin label cards for Ford Auto parts, sheet metal card holders, transparent celluloid card covers, bin markers and stock record cards for mill, hardware, auto and plumbing supplies. Send for samples and prices, and free booklet, "How to Systemize the Stock Room." Haddon Bin Label Company, Haddon Heights, N. J.

**WANTED**

Accountant not over thirty-five years old, experienced in hardware store work on single and double entry system, familiar with names and prices on hardware merchandise. Must be willing to travel extensively. State details of education, experience and salary expected. Address reply to Box 437, care HARDWARE WORLD.

**FOR SALE**

The only complete hardware stock in town of 2,000 for sale. Will invoice from $12,000 to $15,000. The business runs from $35,000 to $40,000 per year. Selling on account of old age; business established for forty-two years. Store and fixtures rent for only $70.00 per month. Fine climate, in one of the best and most prosperous sections of California. A good paying plumbing business is run in connection with it. Draws trade from a territory of from 25 to 30 miles. Address California, care of HARDWARE WORLD.

**TRADE OR SELL**

Have fifteen acres, including apples, peaches, pears and small fruits; six room house, electric lights, city water and telephone. Greenhouse, packing and storage houses, garage, cow barn and corral. All modern conveniences of city home. Ten blocks to accredited grade school, railroad station and postoffice, on well sprinkled road. Will trade this property for Hardware Stock of equal value, or sell for cash. Books show $2600.00 profit and have done no manual labor myself, hiring it all done. An ideal place for someone wanting to retire; perfect climate. Write to F. C. Paist, 430 Symes Bldg., Denver, Colorado.

PORTABLE ELECTRIC DRILLS

"With the Pistol Grip and Trigger Switch"

EVIDENCE

The Stutz Motor Car Company, Indianapolis, Ind., who build cars with an international reputation, are using the Drill "With the Pistol Grip and Trigger Switch" exclusively. They have over thirty of these Drills in use in their plant at the present time.

It is not strange that quality tools should be used to produce a quality car.

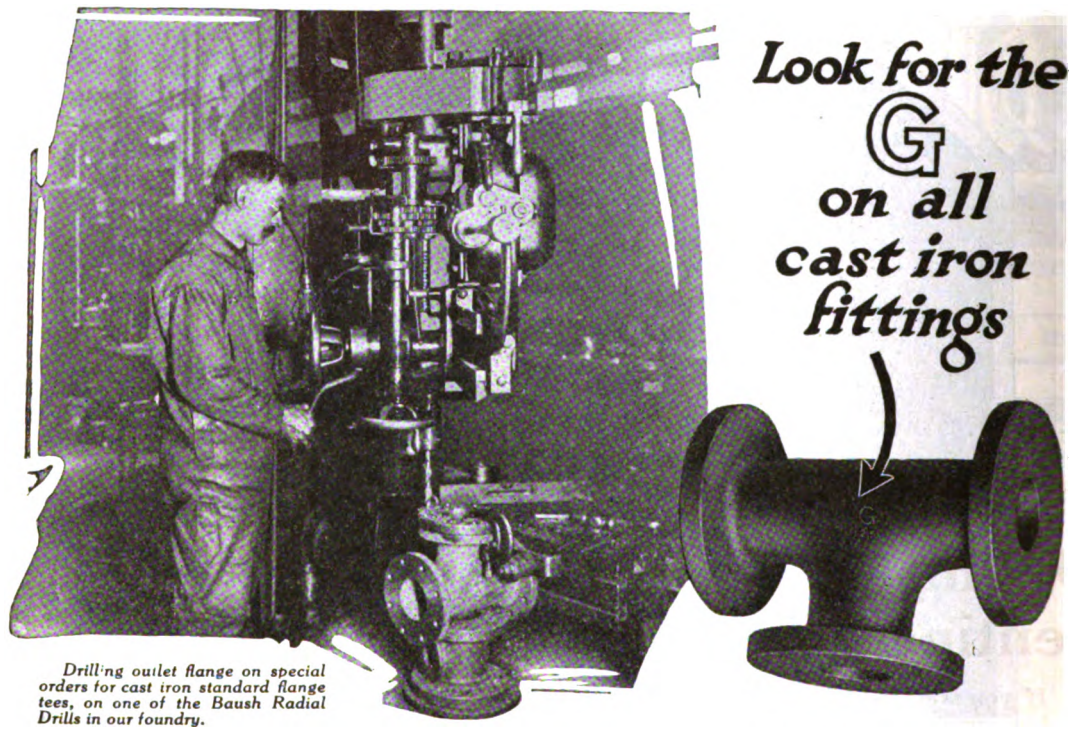
## Good Tools
## Make Satisfied Customers

It is generally admitted that Disston Levels cause less trouble from warping than any others. They are made from specially treated hardwood stock—wood that has been scientifically cured in the Disston plant, so treated as to allow the least possible warp.



Then, too, Disston has developed the easiest and most positive level adjustment on the market. The turning of two small screws enables anyone to true up the bubble. This is a most simple arrangement to offset the invariable slight variation due to heat, cold, dampness, etc. The adjustment is solid when set, and there are no springs to allow an annoying inaccuracy.

Write us for information on levels.
It will mean more sales for you.

# Perfect or Imperfect Fittings —It's Up to You

How many pipe fittings do you unknowingly sell which are so roughly made or threaded that the man on the job can't use them?

How often does your plumber or steam fitter customer find this out on the job—where he can't afford to lose time?

How often do faulty fittings have to be forced onto a joint—and afterwards turn out leaky?

And all these fitting troubles come straight home to you—the man who sold the faulty pipe fittings.

## BE SURE OF THE FITTINGS YOU SELL

Satisfied customers are your biggest asset.

There are no "ifs" or "buts" about Grinnell Perfect Fittings. Every one you sell is doubly inspected—in the blank and after threading. Every one will make an easy, perfect joint. "G" fittings HAVE GOT to be right—we use them exclusively in our Grinnell Automatic Sprinkler systems.

Plumbers' time costs money these days. A few minutes spent botching a poor fitting costs a lot more than a good "G" fitting to begin with. Satisfy your customers with double inspected "G" fittings.

## WHERE TO GET REAL SERVICE

Why not test our service with an order for "G" fittings or National Tube Pipe today. Pipe cut and threaded to sketch.

# Drilling Holes for the Sentinel of Business

If you were to examine the cash register's mechanism—its frame parts—indicator shaft supports — registering keys — tubular locks — parts on shafts and pinion lines—printer frames—cabinet—and drawer cabinets—you would marvel at the number of different-sized holes drilled in each of these parts.

Yet, even an inspection of this kind would increase your knowledge and your appreciation of the important part that drill holes play in the servants of modern business. Also, it would cause you to agree that accurate drill holes are a vital part of the tools of business administration.

Those who build the tools of business use Detroit Twist Drills because of their day-to-day record of giving more accurate holes with less regrinding and with less cost for power.

*When You Buy Drills*

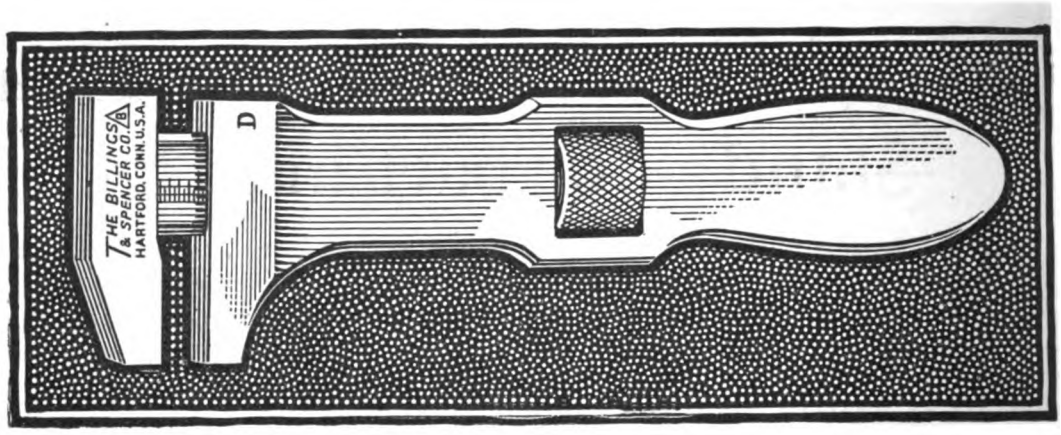
# Work of Hand, Head and Heart —and your part in it

MEN who work with their hands love good tools. All day long, their tools are their intimate companions. Accurate balance, smooth operation, keenness of cut are part of their very thought.

Men such as these are your best customers. As they build up their kits, or replace tools which, after years of service, have lived their life, they come to your store for Millers Falls Tools. Training-school graduates and seasoned veterans both know that the Millers Falls trademark stands for the best.

Through advertisements in The Saturday Evening Post, the story of Millers Falls quality is being told to your big untouched market—the man who "tinkers" about the house. If he buys his Millers Falls tools from you, he will as well buy hinges, hasps, screws, locks—the hundred-and-one things that a handy man adds to his home and his car.



**The Millers Falls Mechanics Handbook will be sent you for ten cents to cover postage**

# Hardware Advertisements for your Local Papers

These general hardware advertisements will be sent to any McKinney dealer free. They are for use in your local newspapers and are furnished in electro form. Ample space is afforded at the bottom of each advertisement for display of your name and address. There are six advertisements in the series.

McKinney dealers, using these advertisements, give their store and products valuable publicity. They also become more active in the big nation-wide magazine campaign which is making everyone realize more and more the importance of hinges — those stamped with the name McKinney. Electros upon request.

# CONCENTRATE!

Would you rather carry one hundred articles in stock and turn them once a year—or ten, and turn them ten times a season? Answer—obvious.

Apply the principle to your stock of shotgun shells. *Concentrate* your stock on the loads listed below. We know from long experience that these loads meet every requirement and give perfect satisfaction. (They are for 12-gauge guns.)

| | DUPONT SMOKELESS Drams | BALL STITE SMOKELESS Grains | DUPONT BLACK Drams | OUNCES Shot | SIZES Shot |
|---|---|---|---|---|---|
| Large Ducks | 3, 3¼ or 3½ | 24, 26 or 28 | 3½ | 1⅛ or 1¼ | 4, 5, 6 or 7 |
| Small and Medium Ducks | 3, 3¼ or 3½ | 24, 26 or 28 | 3½ | 1⅛ or 1¼ | 5, 6, 7 or 8 |
| Grouse, Partridge, Prairie Chicken | 3 or 3¼ | 24 or 26 | 3¼ | 1⅛ | 6, 7 or 7½ |
| Pheasants | 3 | 24 | 3¼ | 1⅛ | 5, 6, 7 or 7½ |
| Geese | 3½ | 28 | 3½ | 1⅛ | 4, 3, 2, 1, or BB |
| Wild Turkey | 3½ | 28 | 3½ | 1⅛ | 4, 3, 2 or 1 |
| Squirrel, Rabbits | 3 | 24 | 3¼ | 1⅛ | 6 or 7 |
| Doves, Pigeons | 3 or 3¼ | 24 or 26 | 3¼ | 1⅛ | 6, 7 or 8 |
| Quail | 3 or 3¼ | 24 or 26 | 3¼ | 1 or 1⅛ | 7½, 8 or 9 |
| Snipe, Woodcock | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Shore Birds | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Sora Rail | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Trap Loads | 3 or 3⅛ | 24 or 25 | | 1⅛ or 1¼ | 7½ or 8 |

Cut down your investment—eliminate the dead ones. Get quicker turn-over and greater profits by concentrating on these Du Pont loads.

Keep this list handy. Use it when ordering shells. Remember—

"Steel-Handle"

# The COES Line Is Much Larger Than Most Dealers Think

There's the well known "Knife-Handle" pattern—the most popular wrench ever made for all general purposes.

The strong six parts "Steel-Handle" model —the finest tool on the market for railroads, machine shops and places where steam, dampness, water or insects would injure a wood handle tool.

The mighty "Key-Model" made of heavy steel forgings—the wrench to sell to engineers for work in boiler rooms, also gas and water works, pipe line companies, refrigerating plants, etc. This wrench is unequalled for removing valve bonnets without injury and conserving material. Sizes 28" to 48". 72" to order only.

Most dealers carry the entire line, because they have calls for all these wrenches.

# THE HONOR OF THE ACCO FAMILY

Weed Chains for Motor Cars!

Anchor Chains for Ships!

Chains for Railroads!

Devices that make travel safe on land and sea, that can be absolutely depended upon to protect human life, are typical of the nature and quality of Acco products.

The workers who make up the Acco family know they are doing more than making commodities merely to be sold.

They know that it is their work that holds millions of motor cars and trucks to slippery roads.

It is their work which enables mighty ships to ride safely at anchor, whether in harbor or helpless on a lee shore.

It is their work which makes possible the safe operation of thousands of railroad trains.

This gives the work of the Acco family honorable and distinctive responsibility which is reflected in every link of every Acco product—"From Plumbers' Safety Chain to Ships' Anchor Chain."

In the Acco family, loyalty to the work itself is rated above everything.

This is true of every worker whether the job is directing all of the numerous plants, or operating a 2,000,000 pound tester, or a typewriter.

The honor of the Acco family is in the hands of each member of it, even to the youngest worker.

These are the reasons why it is possible to say not only that "Every Weed is Guaranteed" but that every link in every chain made by the American Chain Company will hold for the purpose intended.

*The big ACCO Line includes chains for every purpose—from Plumbers' Safety Chain to Ships' Anchor Chain—all Styles, Sizes and Finishes.*

# The "Put-It-Offs" are Good Customers Now

A LOT of people in your territory have been sold on the Mueller Pipeless Furnace through our national advertising. They have been intending to buy but kept putting it off. Now the first tang of fall is in the air and home owners who postponed getting furnaces are stirred to buying action.

They want the Mueller because it can be installed in one day, heats the whole house at a fuel saving of a third to a half, and is so durably built that repair costs are practically eliminated. They are going to buy and you can sell them—if you have a Mueller on your floor.

# MUELLER

## *"The Big 3"*

## PIPELESS FURNACE

The only furnace combining these three construction features that insure economy and heating efficiency:

1. **Large and Properly Proportioned Register Face**—Insures delivery of big volume of warm moist air and rapid distribution of air to every room in the house.

2. **Spacious Unobstructed Air Passages**—Permit withdrawal of large volume of cool air from rooms while delivering an equally large volume of warm air into them.

3. **Vast and Scientifically Designed Heating Surface**—Insures full benefit from fuel burned. Prevents hard firing, overheated castings and big fuel waste.

## Write for the Mueller Sales Plan

Let us tell you how we have laid the groundwork for big sales through national advertising in publications having a big circulation in your territory. Get our plans for co-operation and our attractive offer. Write for this now.

# People are Going Into Winter Quarters

With the advent of Fall, people begin on those little odd jobs around the house preparatory to making themselves comfortable and secure for the winter.

This is the time to let your customers know that you carry Sargent Cylinder Day and Night Latches.

It is surprising, when you think of it, how a small article like a latch, when properly merchandised, will boost turnover.

Think of all the doors in your neighborhood which have insecure fastenings—not only those on dwellings, but store doors and apartment doors. Every one is a sale if you go after it.

For safety, security and strength, Sargent Cylinder Day and Night Latches have no equal. They have many special features, chief of which is the PUSH BUTTON STOP, found only in Sargent Day and Night Latches. They are simple, convenient and safe, and there is no possibility of their getting out of order by forcibly closing the door.

Make Sargent Day and Night Latches your standby. Keep them before your customers, and before your salesmen as well.

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

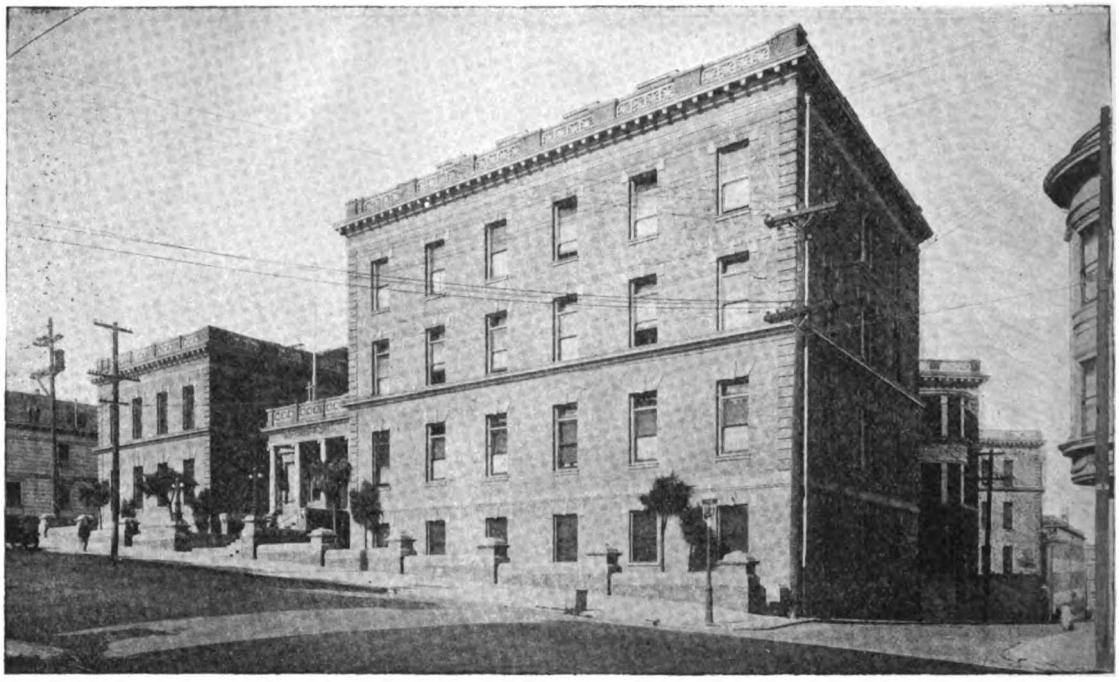
# Reaching Your Entire Tool and Cutlery Trade

Telling the hardware trade about Keen Kutter quality.

THOSE who buy and use tools and cutlery see Keen Kutter advertising time and again. Every advertisement carries to the skilled mechanic, the occasional user of tools or the women of the homes a straight selling talk on the advantages of Keen Kutter marked goods—their thorough development, their proved quality, their absolute guarantee of satisfaction or money back.

Double page spreads in the Saturday Evening Post reach practically every class of your trade. Practically every union carpenter is reached more directly through pages in The Carpenter. And there is page after page in the Federationist, the official publication of the American Federation of Labor. Your trade in the rural section is reached by Keen Kutter advertising in the leading farm papers of the West.



Turn this sales influence to profit—link your store with this intensive Keen Kutter selling campaign. Show the advertisements in your windows. Make use of the S. A. S. (Simmons Advertising Service). Its complete direct advertising service is yours for the asking.

Mary's Help Hospital, San Francisco. The Guilfoy Cornice Works used Toncan Metal for all the Sheet Metal Work on this building.

# Toncan Increased His Business Over 50%

The Guilfoy Cornice Works of San Francisco has been a constant user of Toncan Metal for many years. In a letter dated July 15, 1920, Mr. Thos. J. Guilfoy says of Toncan:

> **"Since Toncan Metal was placed on the market, I have increased my business over 50%, and the reason is easily explained, to wit:**
>
> **"In using Toncan Metal I am giving my client the best metal in the market, barring copper, for cornices, gutters, skylights, and other sheet metal work on buildings, and my customer soon realizes, that he has very few repairs on a Toncan Metal job, against steel; consequently, when he builds again I have no trouble in securing the job against my competitors. Most of them use steel, because it is a fraction cheaper, but my contention is that I am in reality the gainer, because Toncan Metal is more pliable, consequently takes less time to form, saving considerable labor, which more than offsets the difference in cost."**

Its supreme lasting qualities and easy working qualities have made Toncan a favorite among sheet metal men everywhere. Ask nearest distributor for full information.

REMINGTON UMC

# National Match Victories

REMINGTON UMC

AT CAMP PERRY, OHIO
WON WITH

Remington

TRADE MARK

# AMMUNITION

## WIMBLEDON CUP MATCH

The historic Wimbledon Cup Match, the blue ribbon military long range rifle shooting event, was won by Lieut. Lewis A. Yancy, U. S. Navy, with Remington Palma 180 grain .30 caliber cartridges. Lieut. Yancy made a new record of 100 possible and one extra Bullseye.

Capt. C. J. Van Amburg was third with 99 and Chamberlin, of Michigan, fifth with 99, both shooting Remington ammunition.

## OTHER EVENTS

**THE PRESIDENT'S MATCH**

Lieut. Michael Foddy, Thirteenth Cavalry, U. S. Army, won the President's Match and established a new record with Remington Palma 180 grain .30 caliber Springfield cartridges, scoring 296x300. Lieut. Foddy hit the 4-inch spotter 19x20 shots at 600 yards. His mean vertical deviation was two inches.

**HERRICK TROPHY MATCH**

With a new record score of 1735 x 1800 for a team of eight men shooting 15 shots each at 800, 900 and 1000 yards, the Massachusetts Civilian Team won the Herrick Trophy, shooting Remington ammunition under Palma Match conditions.

**ADJUTANT GENERAL'S CUP MATCH**

John W. Hession, New York A. C., making a 100 possible score and 21 Bullseyes over—a new world's record of 31 consecutive Bullseyes at 1000 yards—won the Adjutant General's Cup with Remington Palma 180 grain .30 caliber Springfield cartridges.

**GOVERNOR'S CUP MATCH**

Capt. C. J. Van Amburg, scoring 149 x 150 with Remington Palma 180 grain .30 caliber cartridges, won the Governor's Cup.

**CATROW CUP MATCH**

John W. Hession, New York A. C., won the Catrow Cup Match, making a perfect score of 105, and 14 extra Bullseyes, shooting Remington Palma 180 grain .30 caliber cartridges.

**ADJUTANTS' GENERAL MATCH**

Adjutant General Richard D. LaGarde, U. S. A., won the Adjutants' General Match, shooting Remington ammunition, with a score of 93 x 100.

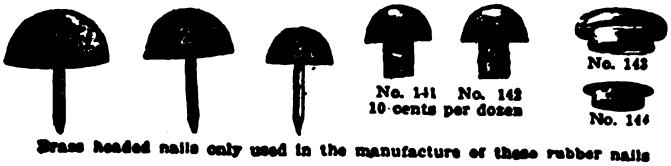
# Some High Grade Standard



# Rubber Tips and Bumpers

## That ought to be in your stock

Brass headed nails only used in the manufacture of these rubber nails

Rubber Tips and Bumpers are in big demand these days—people are beginning to realize the great advantages of their use.

But all tips are not good tips—and a bad tip prevents further sales—further business.

It is up to you, to stock the best and most varied line. Inspect some of the illustrations—there's a tip in our line for every practical tip purpose. You had better investigate—for the sake of good business.

Write today—ask for catalog, prices and terms.

# The GUARANTEED ROPE

## "Yes---it's *Tape-Marked* Columbian Pure Manila Rope"

"See this Tape with the red, white and blue colors bearing the name and trade mark of the Columbian Rope Company, which I have pulled out of this strand and untwisted. This *Tape-Marker* is imbedded in that strand for the entire length of the rope and is an absolute guarantee that the Columbian Rope Company stands behind its *Tape-Marked* Rope as regards durability, strength, quality of fibre and workmanship.

It's easy to sell this superior rope when the broad guarantee of the manufacturer is backed up by this red, white and blue marker and signature in every foot of it. Each customer benefits by that guarantee whether he buys ten feet or ten coils of this Columbian Cordage."

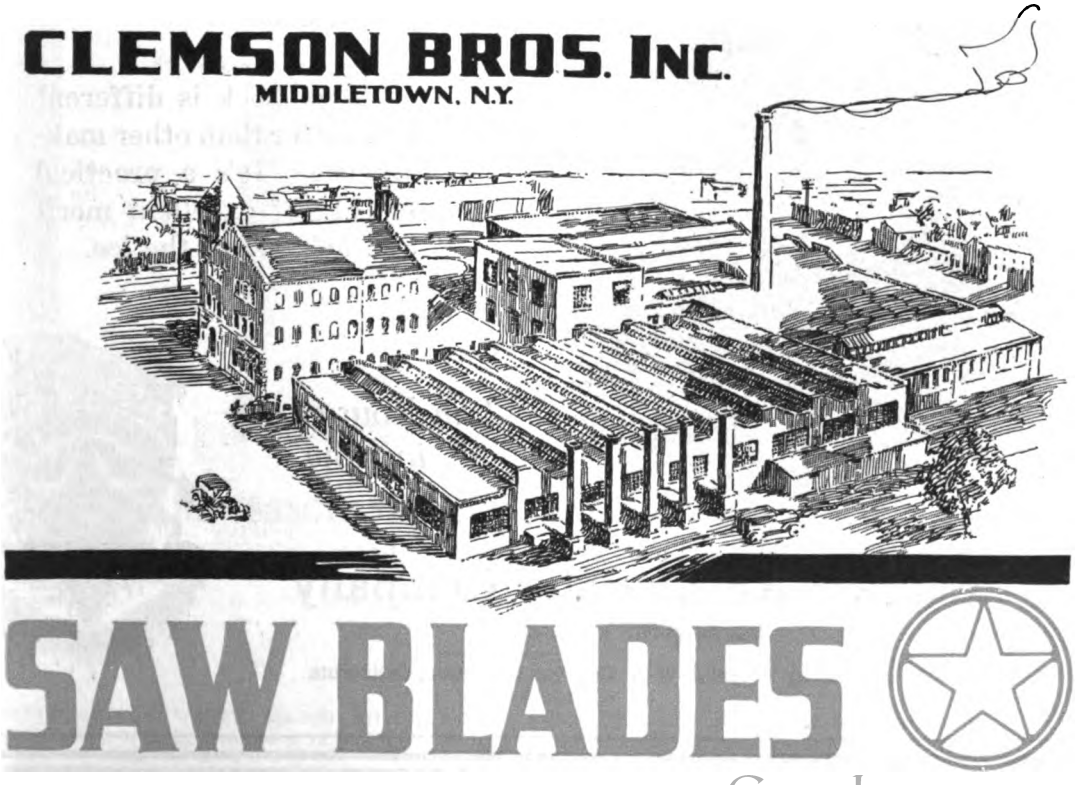
**"Will he come back again?"**

That's the big question that every thinking dealer should ask when his customer takes his purchase under **his arm and goes toward the door. The amount of one sale may be small, but the profit one customer may bring into your store throughout the** years is what really counts in building your business.

# STAR HACK

Digitized by Google

Every time you include extra satisfaction in the package of goods you sell a customer, you have wrapped up the seed of repeat sales that will grow into a larger business.



Star Saws in the famous green box have been the standard hack saws in the hardware and supply trades for 37 years because no other saw begins to give the same results in cutting all kinds of metal under all kinds of conditions.

For years Star Blades have been as staple in the trade as sugar in a grocery store. They are the kind of business builders on which wise dealers always standardize.

Star Hack Saws are now sold by Clemson Bros., Inc., Middletown, N. Y., who have made these famous saws since the beginning in 1883. This new policy of selling our own product enables us to give both trade and consumer a more direct and effective service than ever before. We stand behind our product to help you in every way to make it profitable.

Our large national advertising on Star Hack Saws, which has been making these saws more than ever the largest selling blades, will be continued on a larger, broader scale than ever the coming year.

When ordering through jobbers, be sure to specify "Star" and accept no substitutes. Send any inquiries or direct orders to our factory address and they will have every attention.

# This Jams the Door Snug to the Door Jambs

**IT'S THE BALDWIN REFRIGERATOR LOCK**
**"BALDWIN" PATENT AND DESIGN**

It's the best Refrigerator Fastener made—squeezes the door tight to the refrigerator, and in combination with the rubber insertion which we put around "Baldwin doors," makes an absolutely tight joint.

Photograph shows the plain polished Nickel style, used on our "Snow White" Opalite Glass and "Sanitas" Porcelain lined and some other styles.

Made in Roman Gold finish, ornamental design for the more moderate priced goods.

This Lock is different and better than other makers use. It's a practical feature of excellent merit and helps save the ice.

# Why dealers who demonstrate make the biggest sales

*AutoStrop Razors sell themselves when the salesman demonstrates them. Show the customer how the blade opens for cleaning like the leaf of a book.*

*To clean, simply rinse and dry. No parts to unscrew — nothing to take apart and reassemble. The same lever that releases the blade adjusts it for close, medium or light shaving.*

## *Live merchants everywhere find that it pays to "show how it works"*

WITH the average man seeing is believing. Five minutes of "seeing how it works" will do more to convince him than hours of carefully prepared selling talk. Just let him once try out the article and test it for himself and the chances are ten to one he will buy it.

Big profits are coming to hundreds of dealers who realize that the best way to sell an AutoStrop Razor is to ***demonstrate*** it—to ***show*** the customer how it works, and to let him try it for himself. When the prospect sees how easy it is to strop, how it can be cleaned and dried, all without taking apart or removing the blade, how a touch of the thumb adjusts it for a close, medium or light shave, the sale is made.

There is no good reason why ***your*** razor showcase should not become one of the most important and profitable in your whole store. When well demonstrated, the AutoStrop Razor practically sells itself.

### *What demonstration has done for others*

One dealer in New Jersey has thought of a novel way to get customers to demonstrate for themselves. To anyone who can make the mechanism of the AutoStrop Razor cut or injure the strop while restoring the edge, he offers an AutoStrop Razor free. Due to this scheme his store has become known for miles around as "Razor Headquarters."

A dealer in a small Iowa town gives his customers a chance to try the AutoStrop Razor for themselves, and finds there is nothing like a demonstration to increase sales. For the past two years he has averaged more than $3,000 a year—selling AutoStrop Razors.

And so it goes—everywhere men who own 3 and 4 kinds of razors are being appealed to by the AutoStrop Razor guarantee of at least 500 cool, smooth shaves from each twelve blades.

Digitized by Google

# How successful dealers handle a demonstration

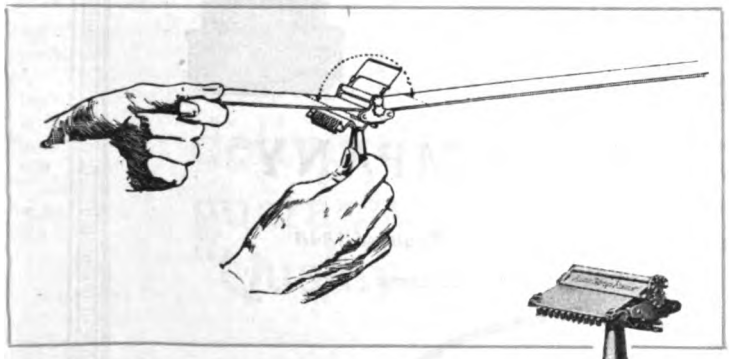
These dealers who are making a success of their razor business do not, of course, wait for the customer to ask for help.

No matter what a man comes into the store to buy, the talk is led around to shaving economy and the AutoStrop Razor — then for a real demonstration. The customer is shown how it takes only 10 seconds to renew the keen, fine edge of the AutoStrop razor blade—how it can be rinsed and dried in less than half a minute—how easy it is to insert a blade when a new one is finally necessary. Then he is urged to handle and try out the razor for himself.

These are practical business-building ideas that have proved their worth with other dealers. They will help a lot toward making your store stand out in the community — toward giving it a personality that will attract customers and hold them.

*Dealers*: Write for our merchandising plan and other dealer helps. We can help you to duplicate the success you have just read about.

AUTOSTROP SAFETY RAZOR CO.
New York Toronto London Paris



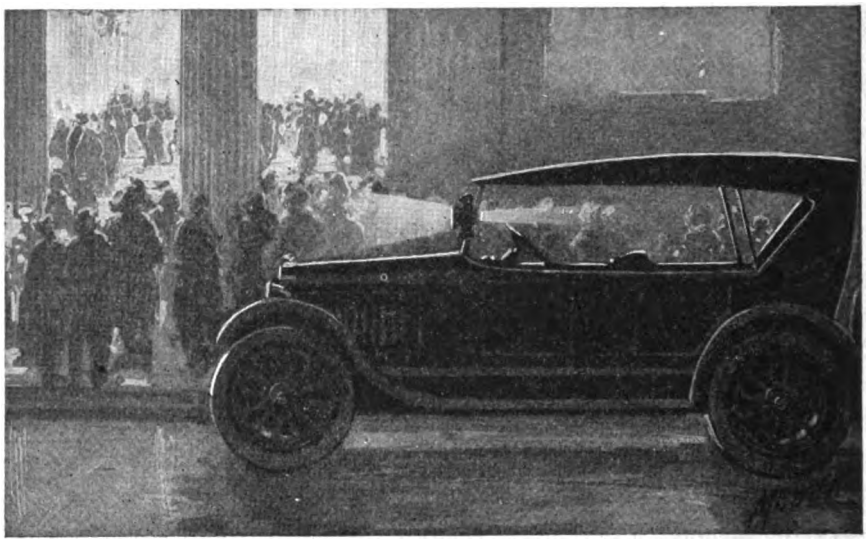
320 newspapers are carrying the story of the AutoStrop Razor to every locality in the United States.

Special advertising, the most effective we have ever run, will reach a total of 25,000,000 live, up-to-the-minute newspaper readers. The selling appeal in these advertisements has been tested and proved. In 1919 this same kind of advertising *trebled* the business.

***A magazine audience of another 20,000,000***

44 big advertisements, some of them two-page ads, every one tested, are running in such big national magazines as Literary Digest, Collier's, American Magazine, The Red Book, Cosmopolitan, Life, and the American Legion Weekly — all men's magazines of big pulling power.

There never was an AutoStrop campaign so comprehensive as this. We are pushing right ahead—will you be with us?



*On razors, strops, blades, etc., hereafter manufactured by us we shall apply the trade mark "Valet" in addition to the trade mark "AutoStrop" as an additional indication that they are the genuine products of the AutoStrop Safety Razor Co., New York*

# Which Way Do You Handle Nails?

MANY a Hardware man has his hands all "Scratched up" getting nails out of a keg—others have grown tired chasing to a bin and using a nail claw—wasting their own time and keeping customers waiting.

The quickest and easiest way to sell nails is with a scoop and an "ECLIPSE" Sectional Revolving Ball Bearing Nail Bin which is

**Used by More Than 9,000 Stores**

The "ECLIPSE" is built with individual revolving sections. Each section works independently of the others and revolves upon ball bearings. The slightest touch will turn any section, even when loaded to full capacity.

This strong all steel fixture holds from 15 to 25 kegs of nails (according to size), and occupies only 4 feet diameter floor space.

Each compartment holds better than a keg of nails, and saves both time and nails in waiting on customers.

The "ECLIPSE" is also a fixture that you will be proud to have in your store.

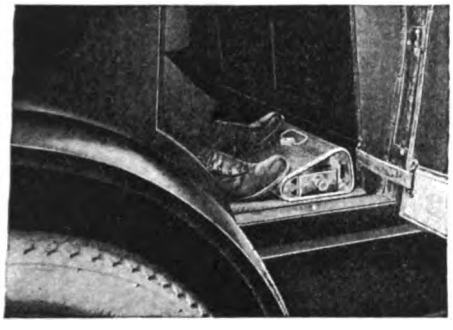
# Domestic Electric Iron

## THE IRON THAT DOES NOT COME BACK FOR REPAIRS

The hardware dealer builds his reputation on the efficiency of the goods he handles. In electric irons he wants a product on which there are **no complaints.** This is the record of the Domestic, from the enthusiastic letters received from dealers the country over. Here is one:

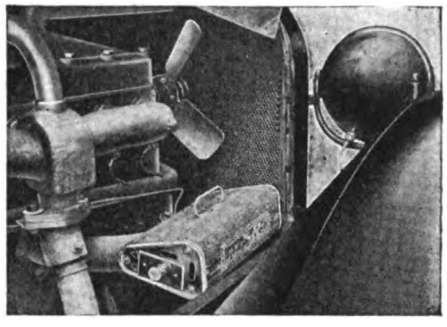
Tucson, Ariz., Aug. 13, 1920.

We have sold a good many Domestic Electric Irons and have never yet received a complaint of any kind. In finish they are not excelled by any iron on the market; they make a neat appearance, are well shaped, and are very reasonable in price.



W. J. CORBETT HARDWARE CO.

This is the iron for you to stock—start with a trial order of six or a dozen—get them from your jobber or from us.



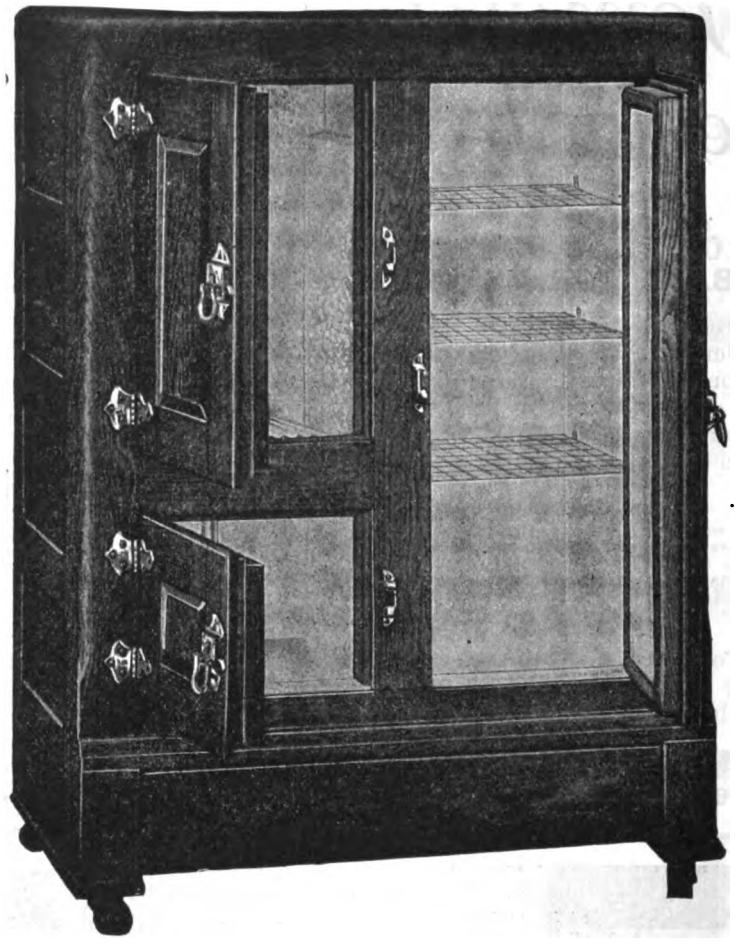
Selling Helps Include New Folders, Electros and Counter Cards. Ask for them.

**The Reputation of the Chicago Flexible Shaft Company is Back of the Domestic Iron — Your Sales Easy, Profitable, Satisfactory**

**In the car while driving— Keeps the passengers warm.**

**Under the hood while standing— Keeps the engine warm.**

## THE DOUBLE USE OF THE CLARK HEATER MAKES LARGER SELLING OPPORTUNITY



The efficiency and economy of the Clark Heater for comfort in cold weather driving is well known. The autoist will find additional service in the elimination of cold weather starting troubles. Take heater from car and place under the hood on opposite side of engine from carburetor, when car is standing in garage or street. No waste of oil or gas in "warming up."

Increase your sales on heaters this season by telling your customers about this additional use. Order now from your jobber, and be ready for the first cold days.

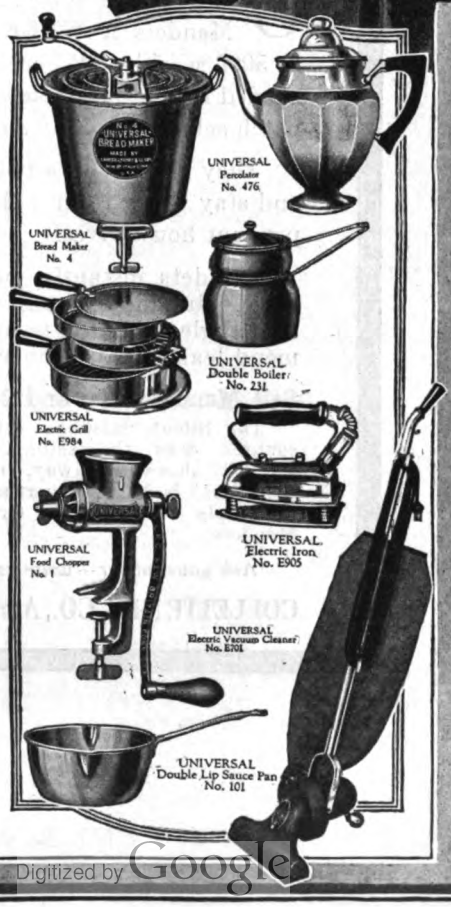
# UNIVERSAL

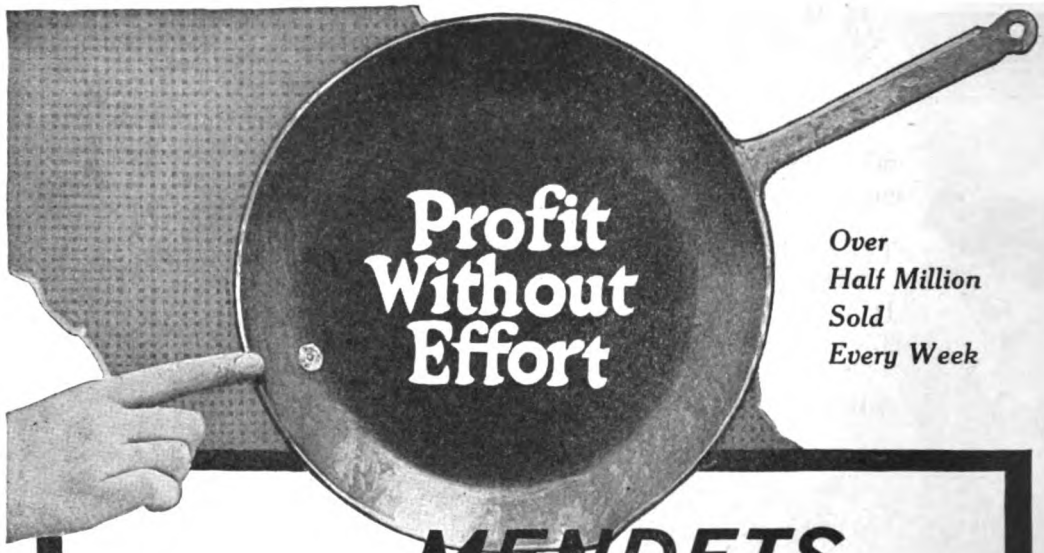
*"The Trade Mark known in Every Home"*

## Home Needs



# The Servant Problem
# Its UNIVERSAL Solution

IN they come, out they go, wagging their wails behind them. Bridget succeeds Hilda, Hilda succeeds Susie, Susie succeeds Dinah—and none succeed in staying on the job. About the time the housewife finds a jewel of a maid she acquires appendicitis or a husband, and neither will allow her to work any more.



Maids are hard to get, hard to keep but easy to do without when the house is equipped with "Universal" Appliances. The problems of washing, ironing, cleaning and cooking are met with the "Universal" solution.

Within easy reach of every Universal dealer are many women who are ready to put money into Universal Home Needs which they can **keep,** rather than to pay wages to maids who leave. "Universalize" your store. Let it be the furnisher of "The Universalized Home." Don't be satisfied to sell something, but sell **everything** "Universal." It will pay—and pay big.

*Over Half Million Sold Every Week*

# MENDETS

A PATENT PATCH

TRADE MARK REG. U.S. PAT. OFF.

## *wonderful little Big Profit maker*

ONE chain of stores in the country sells over 25,000 packages of Mendets A WEEK. A score of other concerns sell from 500 to 5000 weekly. Wherever there are pans and kettles, Mendets are needed for both convenience and economy. That's why this patented patch sells so speedily and in such big volume.

They go on with a twist; require no heat, solder, cement, or rivet; and stay water-tight. Mendets save millions of dollars annually for prudent housewives.

Mendets instantly mend graniteware, aluminum, iron, and tin; fit any angle; stand extreme heat; also mend leaks in all rubber goods.

**Sell Mendets, 10c and 25c Packages**

The Silent Salesman cabinet on your counter does the selling. The slogan, "Don't throw it away, mend it with Mendets" is being advertised to millions of people every week. Order by name, Mendets.

They admit PYREX is a profitable line.

It's an all-year-round seller, and always attracts the eye of the housekeeper.

A display of PYREX is all that is needed to sell it.

# PYREX

## TRANSPARENT OVEN DISHES

### *Are all-year-round sellers*

PYREX is nationally advertised.

PYREX is guaranteed.

The leading manufacturers of metal mountings have adopted PYREX for their standard insets.

Jobbers handling housewares have complete stocks of PYREX.

Genuine PYREX is guaranteed by the name stamped in every piece.

A booklet "How to Sell More" will be posted to buyers and salespeople, free on request.

## Saturn Stationary Can Opener

DISCARD THE TNT; LAY AWAY THE HATCHET; NEVER MIND A HELPER. Just set a can under the knife and turn it around as you work the pump handle, and there it is, all done. Opens any ordinary size can; smallest or largest; square or round. A child can operate; no more bloody fingers and no more strong language. Just look at it and judge for yourself whether every home, restaurant, hotel, club, camp, etc., will buy it on sight. Nothing has been longer demanded.

Shipments October 25th.

OPENS CANS OF ANY SIZE OR SHAPE

# Ladd All-Steel Beaters

## 3 Sizes—For All Requirements

Candidly, we don't know of a single dealer who ever sold these Beaters during their 8 years of life who does not declare them the MOST PERFECT EVER PRODUCED. They are made for SUPERIOR trade; MUST BE SUPERIOR GOODS, thus we are obliged to make them of ALL-STEEL. First COPPER-PLATED, then NICKEL-PLATED; a fine attractive finish every woman approves, and buying, finds construction and operation a revelation to her in results produced.

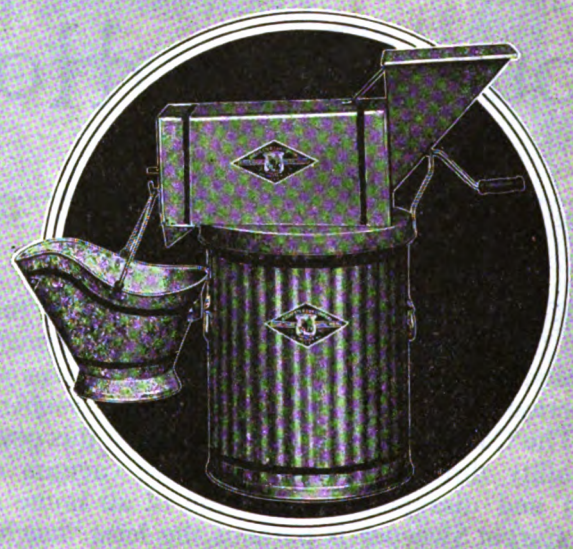
# Judge by Your Own Home!

INQUIRY at your home tonight will disclose that your Bissell Carpet Sweeper is in *daily* use and considered a necessity, no matter what other cleaning devices you may have for periodic use. Other homes find the sweeper just as needful. The Carpet Sweeper has maintained this position of indispensability through fourteen years of vacuum sweeper enthusiasm and disappointments. And of all home utilities, the Bissell Carpet Sweeper is perhaps the least "mechanical", the most automatic in action and service and entails the least trouble chasing.

## Moral—Order Your Fall Requirements Early



Bissell's New Lightweight Vacuum Sweepers (*with suction power greater than some electrics*) furnish efficient cleaning for those homes not wired for electricity or who count the cost. You probably have many such customers. Remember there are no motor or other intricate parts to cause annoying complaints. They are really easy running. They are a satisfactory article to sell.

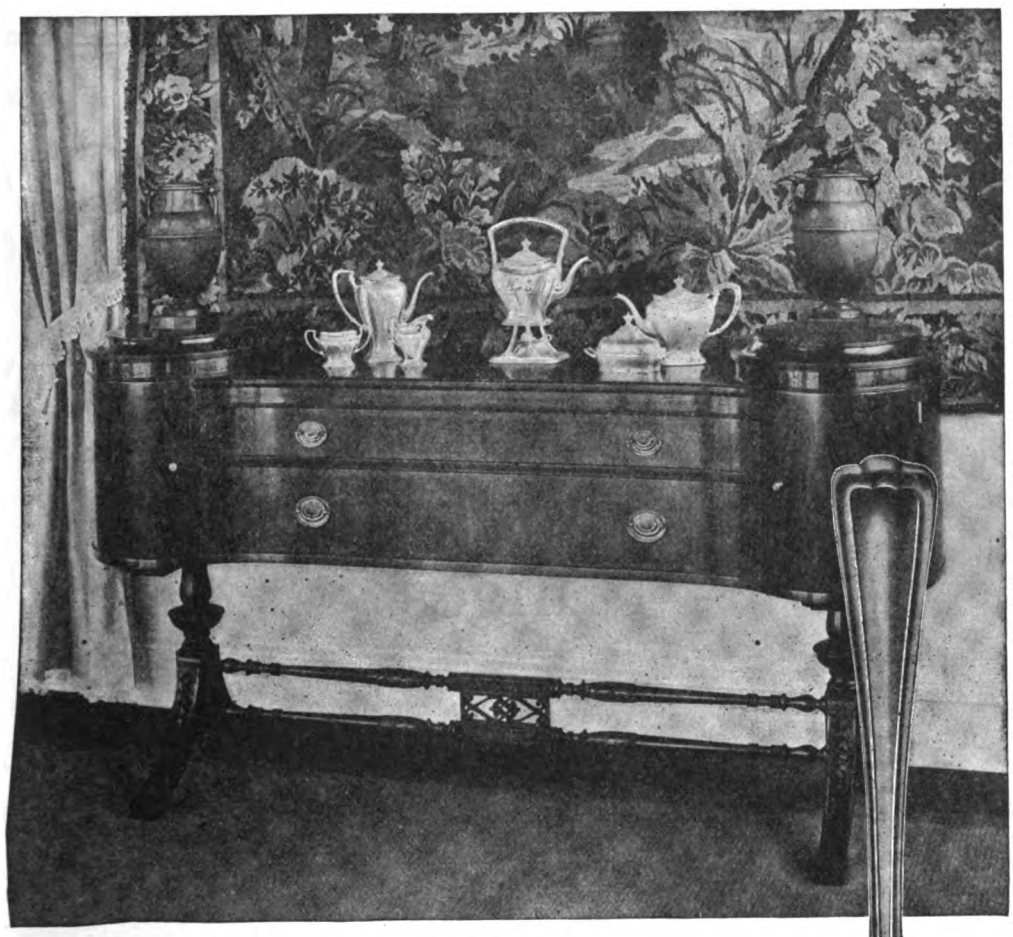
**Iron Horse Ash Sifter**



With coal prices still climbing skyward and a serious question yet as to whether or not we are all going to be supplied, means there is going to be a bigger demand than ever this fall for well built equipment of this kind. Why not put in a stock of them now and capitalize the demand already created for this money saving piece of home equipment.

By the way, how is your stock of Ash and Garbage Cans? It is an excellent plan to order early.

# The Man as a Purchaser of Silverware

Few men are good at remembering anniversaries or at knowing what to give, even while they are anxious to give something and have that something right. But if they know that the wife, or mother, or daughter is gradually acquiring a silver service—flatware and hollowware all in the same pattern—the question of what to give is solved—not for one anniversary but for several in succession.

The man who becomes a regular customer is worth cultivating.

## The Only Screw Holes in the World

### The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

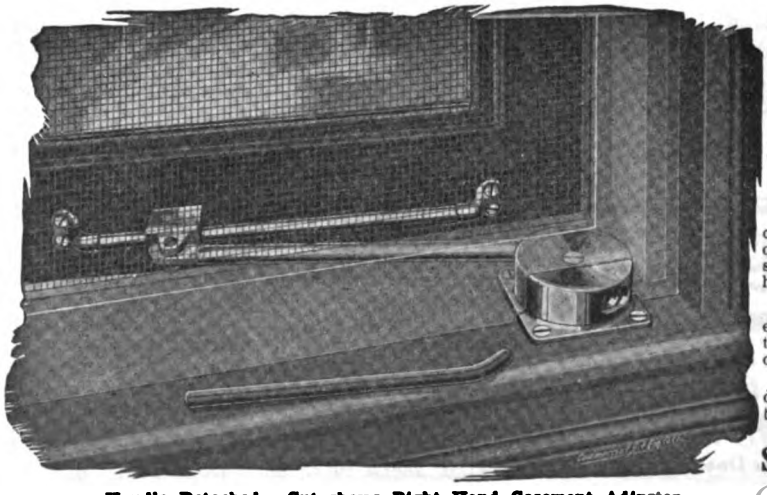
## WAGNER Door Hangers and Tracks



*Roller Bearings*

Quality hangers and tracks designed to overcome all the troubles and draw-backs of cheaply built hangers and tracks that are made merely to sell at a price. Wagner Hangers have roller-bearing wheels, tandem trolley with bumper on end to protect wheels, a very simple and practical cam vertical adjustment and other features that put them out of the ordinary class. Tracks are self-cleaning, bird-proof and much heavier than ordinary tracks. They please customers and build trade. Write for catalog showing entire line.

*Complete stock carried at Tigard, Oregon, Branch*

WAGNER MFG. CO., Dept. T, Cedar Falls, Iowa.

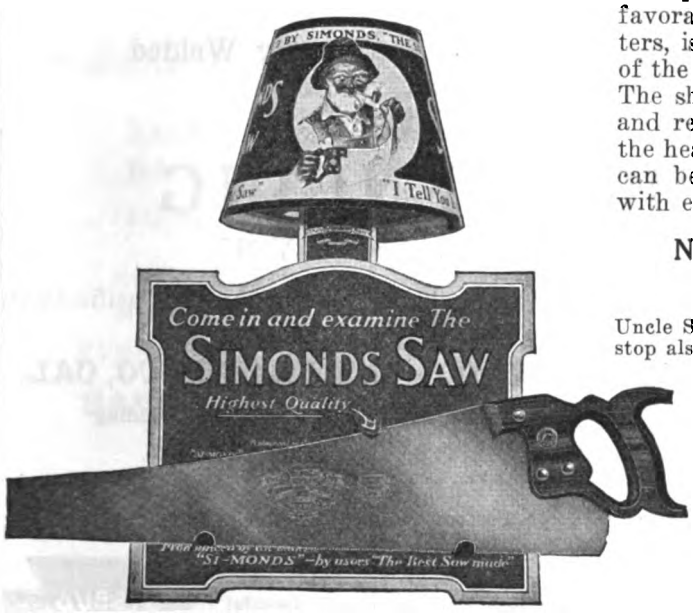
Handle Detached. Cut shows Right Hand Casement Adjuster

## Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.



Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

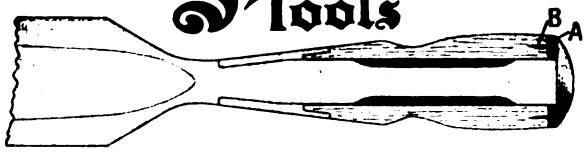
**SAFETY** INTERLOCKING STOVE AND FURNACE **PIPES**

Fire Preventing

Home Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.



Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

## Blade, Shank and Head One Piece of Solid Steel

This not only insures great strength and durability, but enables the full power of the blow struck by a hammer or mallet to be transferred directly from the head to the cutting edge.

The Blade is forged from one end of the steel rod, the other end being upset to form the Head.

A leather washer (A) is placed between the head and the handle. This acts as a cushion, relieving the handle from shock when a blow is struck, thus preventing same from splitting. A Brass Ring (B) is driven into the large end of the handle, providing an additional safeguard.

The illustration shows the general construction of all "Everlasting" Chisels.

No. 1251 Length 13 in. Over All

No. 250

*Right and Left Hand and Rigid*

**THREE SIZES**

No. 250 Capacity up to 3/16 in. Taps
No. 251 " " " 5/16 " "
No. 1251 Same as 251 with long shank

Yankee Tap Wrenches are especially adapted for work in close quarters and places out of reach. The cross arm is easily drawn to one side and with the ratchet movement, holes are readily tapped in close corners. The No. 1251 is 13 inches overall, giving a long reach into inaccessible places, making it indispensable in Automobile work and work of similar character.

# A MARVELOUS WORLD'S RECORD

With **Peters** Cartridges

## THE FIRST 15 SHOT POSSIBLE

For the first time in the history of the United States Revolver Association a 15 shot possible has been made. This World's Record was made by T. K. Lee in Match 32 of the recent U. S. R. A. Indoor Team Matches.

But this is only one of the records that he established in this series of matches; he also made **record average** for 33 matches—143—636—25 possible scores of 50—next highest competitor making only 6. Ran 24 consecutive 10's.

Mr. Lee used Peters .44 S. & W. Special Mid-Range Wad Cutter Cartridges.

None of these records have ever been equalled by any other ammunition, and all are records by a wide margin.

# *A Good Rope—*
# *Seaport Manila*

P
*Trade Mark*

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

# $35.00 Per Week Clear Profit For 4 Years

Reads like a romance. doesn't it? Well, here's the story in a nutshell: Four years ago a well-known N. Y. Hardware man bought a 12-blade

## Hatfield Complete Sharpening Machine

He rented a small window in Nassau Street—installed that machine where it made every man "Sit up and take notice"—hired a man to run it.

"Results!" We'll say so. We have it straight from the man who managed this business that his net cash profits after paying rent, operator and all expenses have averaged $35.00 per week for the full four years, sharpening all makes of Safety Razor Blades.

Now the man who ran the machine is looking for a good window for himself. He says: "If the Boss can 'clean up' $35.00 per week on a $250 investment—why can't I do the same?"

Write for particulars.

# What's In a Name

Enough—plenty — SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore, Brunswick Balke (Pool Table Mfgrs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN!" asks the above member of the Gem Brush family. **HERE AND NOW.**

"On and above the fact that GEM BRUSHES possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name G-E-M, connected with shaving things particularly, spells **SUCCESS** from every stand-point necessary and essential. **GEM BRUSHES** represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is **BUYING POWER**, they will ride forth with confidence of our trade to reach all points which is **ULTIMATE CONSUMER** via stations called **DEALERS**, through the transfer points called **JOBBERS**. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because **GEM** exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in **GEM BRUSHES.**

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. **GEM BRUSHES** not only will sell on account of name, but, be backed up in use with real quality and service.

**GEM BRUSHES** will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that **GEM BRUSHES** are in a class alone. **GEM BRUSHES** are manufactured to sell no cheaper than good brushes can be produced.

**GEM BRUSHES** is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results **GEM BRUSHES.**

(Signed) THE GEM SAFETY RAZOR CORPORATION.

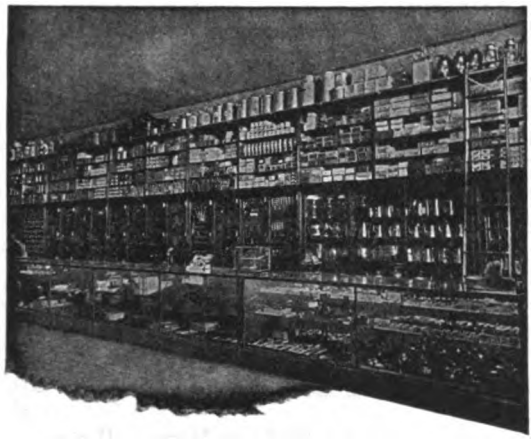
## Massachusetts Made

Strict fidelity to the stern Puritanic habit of thoroughness has made Massachusetts a leader in industry since the day of Plymouth Rock.

As loyal sons of Massachusetts we have tried to maintain a Pilgrim steadfastness to this ideal through the nineteen years that we have been manufacturing incandescent lamps.

And because we have set for ourselves a very high standard of workmanship and have lived up to it, Hygrade Lamps are known all over the United States as "persistently well made."



An article made the Massachusetts way is a profitable one to sell.

# ALUMINUM "Real Solid"

## ANNOUNCEMENT

The **"REAL SOLID"** LINE has been for 10 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

### A New Line of

## "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidness and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS — Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

**We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market**

## KEEP THE GROUP OUT OF AMERICAN POLITICS

It is necessary now and then to get back, or down, to bed rock, that we may keep our ideals, our national ideals and our national principles clear. The American political—not "partisan"—ideal of government is the two-party method of selecting public officials, the servants of the people. The two-party method is far from perfection, but it has done more than any other agency to help us to assimilate the many foreign elements that have been poured into our melting pot.

The two-party method makes it essential that voters shall make their choice without regard to creed, or craft, or caste or race, but simply with regard for the greatest good to the greatest number. The political "group" destroys party integrity, raises petty factions, increases selfishness, engenders narrow rivalry and breeds hatred. The "group" has no place in the American political ideal.

There is a tendency now toward the formation of "groups" in this country. We are threatened with a "labor group," a "socialist group," a "farmer group," a "single tax group," and so on. The purpose of the "group" is not national, in its essence it cannot be national. Its aims and efforts are limited by the purposes of the "group," without the smallest thought for the greatest good of the greatest number.

The voter who goes to the polls next November to vote a "labor ticket," or a "farmer ticket" or any other than a national ticket, not only will be exercising his franchise to no purpose, but actually will be acting against the best interests of the nation.

We hold no brief for either of the leading political parties, but do hold that in deciding between them and selecting from them, we are more likely to keep our national ideals alive than by favoring this or that "group" that is so blinded by narrow and selfish interests that it cannot see anything even remotely approximating nationalism or Americanism.

## "A THOROUGHBRED NEVER QUITS"

That tendency to "rest on the oars" after a good sale has been made, or a fat order taken, plays havoc with a man's career.

Business is a race—a contest, if you please. Only the fellow that will run through to the finish without "breaking" is the thoroughbred.

A thoroughbred never quits.

The contest is within the man himself. It is between a man's knowledge of what he ought to do and that old devil, the tendency not to do it—the "yellow streak"—the tendency to lie down, to run away, to quit.

Because there are no spectators of this contest a man thinks he can get by without fighting, thinks he can run away and no one will ever know it.

You can't cheat. Just as sure as there is a God in heaven, it'll come out.

Not right away, perhaps. But in time your very vitals will be eaten up by that cheat germ.

You'll be so old in spirit, so spavined, so lame, so blind, that the very sight of you will bar your entry in the contest.

Real success is the sense of victory, and exquisite joy, a permanent satisfaction, a genuine happiness that comes only to the man who has gone right on day by day—year in and year out—regardless of conditions and circumstances, doing good work, doing his honest best.

---

If you are not accustomed to studying the advertising pages of your trade magazines you are missing a regular trip through an important market place—a trip that might mean much to you in actual dollars and cents and better business methods.

---

It behooves every man to keep close track of the legislation recently enacted and that pending. Your influence may be just what is needed to prevent or to put through an undesirable or desirable measure. Do not make the mistake of thinking that our representatives have time to make a close study of every bill upon which they vote.

Digitized by Google

## STRONG LIGHT IN THOSE SHOW WINDOWS

"If you expect to make the public take an interest in your night displays, don't try to save on your light bills," says the executive head of the largest window display concern in this country. Window displays elaborately conceived often have the edge taken off their effect by poor lighting facilities, or dimmed impressions.

It is legitimate enough for any merchant to try to reduce costs of operation, but look first and find out whether you are affecting a real economy. A dealer can gauge the dropping off of receipts right in his cash register the minute he turns the night lights low in his windows. Still retailers often fail to see this and many windows almost hide tempting displays because of the semi-darkness. Experiments have shown that a well-lighted window attracts so much more transient trade than does one poorly lighted, that the extra expenditure for light is not an expenditure strictly but a good investment.

Merchants operating in locations on the less prominent thoroughfares are apt to fall into the error of believing that they can get along with less light than they would have to use were they situated on one of the principal streets. That is erroneous theory. A retailer in a secluded situation should exert the more effort to make his store stand out conspicuously, especially at night, and thus wean some of the passersby on the main thoroughfare into his store.

If the rival storekeepers on the main street are illuminating their windows, the dealer off the beaten way certainly cannot afford to wallow in darkness; but if the merchants in the crowded section are not emblazoning forth by means of multi-candle-powered orbs, the way-street-store-operator can steal a march on them by brightening up his displays and thereby creating a contrast entirely in his favor.

To get the very best results the show window at night should be illuminated by lights that flash directly down on the contents of the show space. Placing the lights at the back of the window to make them fulfill the double purpose of lighting up the store and the window at the same time is a sure way of making a gloomy, unattractive store front, and it also detracts from the appearance of the interior of the store.

Another phase of window display that should not be overlooked, is the cleaning of the plate glass. Clean windows are not only an essential; the plate must be polished to a crystal clearness if the light is to shine through effectively and attract the passersby. The mere wiping off of the gathering coats of dust will not do the trick. The plate glass must be rubbed.

---

The goods that move are the goods that pay.

## THE SCIENCE OF ADVERTISING IN 400 WORDS

The rainbow was the first great advertisement. It had position. It had color. It held out a promise of benefit in effect: "I shall not drown you again if you behave." And then it had the value of repetition, because it is repeated in the same position and color and promise after every rain.

The next big advertiser was Caesar, when he wrote on the walls of Rome for the people to read just what the senators were doing in the senate chambers. These advertisements of old contained the elements necessary in all great advertising, which are:

Advertising must be seen; it must be read; it must be understood; it must be believed; it must create a want.

Advertising is different because you must make the man stop thinking as he thinks and make him think as you think and interested in the thing you are interested in. It is easy to interest a man in himself. If your advertising convinces him that it is good for himself, you have him sold.

Suppose a man comes into this room and wants to reach all of you as I am doing. He goes to the man at the door and says: "How much will you charge me to whisper?" The man says: "I will charge you $2 to whisper." "How much will you charge me to yell?" "I will charge you $10 to yell." This man buys five whispers and nobody knows he is here and he thinks he is advertising (laughter). If he had bought one good yell you would have said that is an awful bunker, but at least he is on earth.

Domestic prosperity depends on what we can sell to the outsider. Good advertising creates a want and a desire abroad, and thus creates employment, prosperity and happiness at home.

Don't take it for granted that the other fellow knows all about what you have. Few of us ever know enough, and many of us never know anything. Don't be afraid to keep on telling the world what you have. You have got to keep it up.

Advertising is the heart-beat of business. If you stop a man's heart, he dies. If you stop advertising, business dies!

Bacon said: "Reading maketh a full man; writing an exact man, and talking a ready man," and let me add: Thinking maketh a real man! One great trouble with our American life is that we have invented every device to save us the trouble of thinking.

—Arthur Brisbane.

## THE "TAX ON SALES" PROPOSITION

The French Government has decided to place a tax of one per cent on every business transaction. The fact that this is practically the "tax on sales" measure that lately was urged upon our own congress, makes this action by the French government of uncommon interest.

France is availing herself of this rational method in order to avoid a tax on capital. No country safely can afford to absorb the capital that is needed to keep its industries going. Yet that is what we are doing in the United States through the inequitable and destructive excess profits tax. The tax collector is steadily swallowing up new capital, resulting in the paralyzation of new industries and the withholding of investment in new industrial propositions.

The practical politicians in power in Washington thus far have failed to favor the proposed "tax on sales," but they did not hesitate —in order to provide funds for a soldiers' bonus—to suggest a heavy retroactive tax on profits made during the war, a proposal utterly iniquitous and ruinous. Commenting on this feature of the wild economical vagaries of some of our lawmakers, the Boston Herald says:

> It would be a virtual confiscation of property and would involve a wide departure from all sound principles of taxation. Excess profits were taxed heavily during the war and these taxes were paid without very serious complaint. Whatever profits were left after this taxation were either distributed to shareholders or put back into the business. Much of the capital with which the business of the country is now carried on came in this way. Any retroactive levy at this time would disorganize business to an extent that no one can accurately measure. It would destroy the foundations on which trade and industry rest by reaching back and taking, in ex-post facto fashion, those earnings of capital to which an implied exemption had been given. It is inconceivable that Congress will seriously consider any such mad proposal. * * *If our congressmen think that any form of taxation will not, in the long run, have exactly the same effect as a tax on retail sales, they are mistaken. Whatever the channel of taxation may be, the ultimate incidence is always the same, and the public as a whole bears the burden.

The excess profits tax is iniquitous and destructive. The proposed tax on sales would be just and constructive and adequate for all necessary purposes. The danger as to what congress may do in the matter of taxation is temporarily averted. But after this political campaign is over and the selected lawmakers reassemble in Washington, no one can predict with even a remote approach to probability what will be done by them.

This is why the work of selecting our next company of lawmakers is so highly important to every one of us. It is essential to the welfare of the nation that we send to Washington next November only such men as will keep the national good in mind, men who will be conservative and constructive, men who will labor to manage the vast business of the nation along well-proved economic lines and with an eye single to getting the greatest good for the greatest number of our whole body of citizenry.

## MEN WHO HAVE SOLD ME

One of our Colorado subscribers, who is a retail merchant, has here set down a few of the impressions salesmen have made on him. Those of our readers who are or have been knights of the road will appreciate the point of view.

I like the man who will come into my place with an air of business and plainly state who he is and what he sells.

I dislike the man who slinks into my store like a culprit; who hems, haws and beats around the bush before he comes to business.

I like the chap who uses good, plain forceful English; who abstains from using that much abused word "proposition," and who takes as little time as possible to unfold his tale.

I detest the man who after he has talked to you leaves your mind in a clouded state, with a maze of figures, rates and other details the average layman fails to grasp.

I always like to do business with the man who can answer my questions quickly, who I know has mastered the details and who has terms and prices at his finger tips.

I fight shy of the man who fumbles through long printed lists, who refers first to one book then to another—who is never sure of his statements.

I like the chap to whom I tell frankly, "I am busy today," knows I mean it, and will not try to steal or usurp my time and who realizes at certain times a man really is tied up with more important details.

I hate the fellow who tries to force you to see him, who also will not take your word for your statement, and who will insist you devote your mortgaged time to him and what is more he never gets my name on the dotted line.

I also like to accommodate the salesman who does not hesitate to tell me frankly and truly what he thinks is best for my trade, if he really knows.

I hate to do business with the chap who has a "pet" to sell and who will almost try to force it on you, no matter if it is best suited to your conditions or not.

Give me the man who will not offer any snide, cheap tricks to gain his point, who will act fairly and above board and who never tells me: "You will make a mistake if you do not buy my goods."

I never did like the fellow who made me feel cheap; who also made me doubt the wisdom of judgment in previous transactions, and who makes me feel like a "dummy" when it comes to buying.

It like the fellow who is clean, well groomed and who looks like an honest man.

---

If you are after a fortune, get an aim first. Robert Louis Stevenson says, very truly: "An aim in life is the only fortune worth finding; and it is not to be found in foreign lands, but in the heart itself."

# The Real Matter With America

**Too Many Men Laying Only 150 Bricks a Day, When 2,000 Is a Normal Day's Work. If You Are Doing Less Than Your Full Share, You are Helping to Keep Up the High Cost of Living**

**(By "Glen Buck")**

NOW—what's the matter with America?
Here's the nub of it:

Upon the loading platform of a busy factory, in the full glare of a noon sun, stood a beaming workman, in bespattered uniform of white denim. Below him, in a roadway, were several hundred men, watching him intently. At his side stood the superintendent of the factory, a small paper in his hand.

"This check for one hundred dollars goes to Joseph Flinn as a reward for merit," said the superintendent. "For Flinn has done a remarkable thing. In nine hours' work he has laid thirty-six hundred bricks—and has laid them well. I don't know that his skill has ever been matched in America. The mortaring of two thousand bricks is a good day's work. Yet Flinn does that ordinarily—and more. Thirty-six hundred bricks in nine hours is an achievement and we are all proud of it. I wish that this check could be many times larger. Three 'rahs for Flinn.

And it was a rouser.

**Joy of Work Well Done**

But look at Flinn's face. All the joy in the world seems to be packed into it. And the rolling muscles under his damp shirt fairly radiate cheer. With just an awkward "Thank you," he climbs down into the roadway. But his head and heart are in the skies. Within he cherishes a leaping flame that no mere hundred-dollar check can account for. Flinn is realizing the joyous satisfaction that always comes from good work well done—and life has no finer joy than that.

But—but—

What of the man who lays 150 bricks when 2000 is a fair day's work?

Last month a gang of men were laying a great brick wall in the city of Detroit. At the end of the second week they had averaged for each man on the job just a hundred and fifty bricks a day—no more.

There is tragedy for America in these figures.

A hundred and fifty bricks a day!

Is it not an unsanctified wonder that the very wall didn't melt with the burning shame of it, and sizzle in one fiery mass down to hell?

A hundred and fifty bricks a day!

Time is one commodity that cannot be destroyed without serious consequences. The time-killer, like the life-killer, cannot revive his victim; he absolutely annihilates a thing of unmeasured value and potentiality. A man may loaf or play and serve the purpose of health or spirit. But the man who shirks on the job destroys a value that can never be replaced—and dissipates within himself moral fiber, without which personal and class progress are impossible.

A hundred and fifty bricks a day!

Digitized by Google

**Do Not See They Harm Themselves**

The pity of it is that these bricklayers do not see that they are harming themselves most of all. An honest wage is every honest workman's right; and the world at large suffers when he does not get it. If it is a high wage he must pay more for housing, clothing, food, entertainment. The adjustment is automatic and sure. If it is an unreasonably high wage the established order is thrown out of kilter at its very base, and that fair margin between income and outgo, which ought to be every worker's rightful security, becomes a matter of chaos and adventure. If high wages be maintained there must be high productivity, or disaster inevitably follows. That law cannot be sidestepped. Men may dream dawdlers' dreams—but human nature is deep and inexorable. The slacker makes calamity certain for his fellows. But what is infinitely more important, he makes misery and failure inevitable for himself.

The man who lays a hundred and fifty bricks a day when he should lay two thousand, not only cheats his employer and robs society of the needed fruits of his labor, but he is rottenly dishonest with himself.

One hour's real work spread over ten makes a thin padding for a bad conscience.

**The Time-Killer Also Kills His Moral Self**

So, it must be that if the shirk goes home in the azure glow of a warm spring evening, beats his wife into a trance and kicks the baby out of the window—he is but finishing a bad day's work logically. He carries with him nothing of that inspiring zest which comes from worthwhile accomplishment—from a good job well done. The hours of the day have hung about him heavy and dark. Its minutes have been eternities. And their slow speed have generated within him nothing but a sort of low meanness—rotter of the moral fiber.

The hardest day's work is done by the shirk.

If organized labor is countenancing the curtailment of individual production it is delivering to organized labor a knife in the back. In union there must be strength—not weakness.

We need more Joseph Flinns—and more of his kind of joy. Without them the social fabric must rip into rags.

That is what's the matter with America—now. —The Stencil.

---

One of the big constructive tasks before the retailers of the country is the preaching of true thrift. The advertising can do a great work in establishing a demand for the more durable and practical lines of merchandise. Economy talks, explaining the economic advantages of thrifty buying and the curtailment of needless spending, will play a prominent part in the advertising of merchants in step with the times.

---

We cannot trust our political affairs at the present time to anybody who happens to take an interest in them. Our responsibility is to know what is doing and to see to it that the right and fair measures are put across.

LOVE AND LABOR

When Love and Labor marry
The world will live in peace;
Then both will work together
And all our wars will cease.

---

Some men are like merry-go-rounds. They travel a long ways, make a lot of noise, but never get anywhere.

---

Remember, that buying is a fine art as well as selling. How do you buy? Do you follow the lines of least resistance or do you canvass the situation, get thoroughly posted, and take your discount?

# An Illustrated Story Of An Error

**It Took 37 Men, 3 Women, 2 Boys and 8 Horses to Correct**

**Needless Mistakes Swell Overhead and Add to the Cost of Modern Business**

(Copyrighted by Jerry McQuade)

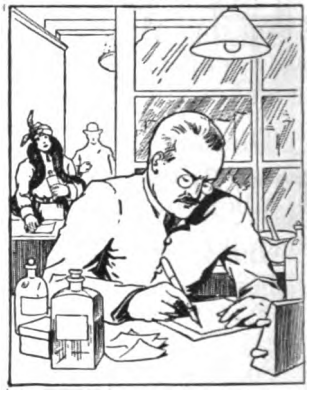
1. A Merchant desiring 1/12, writes order for "1 at $2.00 doz." instead of "1/12 doz." or "One Only."

**Carelessness in writing order.**

2. Wholesaler's stock clerk, being left to guess what dealer really desires, guesses 1 doz. and ships 1 doz.

**Guesses are usually wrong.**

3. Wholesaler's Bill Clerk enters charge for 1 doz. and mails invoice.



**Mistakes are passed along and accumulate.**

4. Merchant receives invoice showing larger shipment than desired. Gets mad.

**What you sow you reap. Start trouble and it will pursue you like a wasp.**

5. Merchant writes letter stating he will return 11/12 doz. when received.

**Wasting 5 minutes to repair what 5 seconds extra care should have prevented, has kept many a man poor.**

6. Goods arrive. Clerk removes 1/12 and re-packs 11/12 for return.

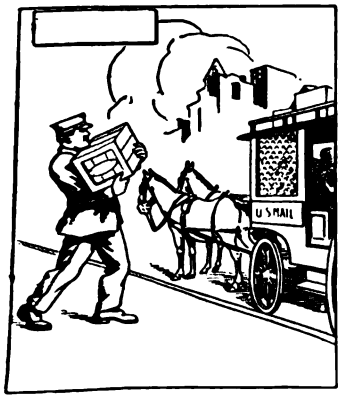
**Time needlessly employed is time lost. Time lost is money lost.**

We illustrate here everyday occurrences, which are by no means confined to the retail merchant.

The real root of the matter lies in the fact that the average boy or girl is not trained in the home. They are not taught to be thorough in their work, in their home duties, in their personal appearance, and when they go to school, the same laxity is observed in education.

The average graduates of the grammar school, or the high school, or the university for that matter, are most inefficient and careless in such small matters as spelling, punctuation and grammar. They are not trained to use their eyes or their ears.

One of the greatest handicaps of the growing generation is its lack of training and efficiency.



Digitized by Google

7. Merchant telephones to post office to send parcel post wagon to call for 11/12.

**Spending 5 cents for an avoidable purpose is equivalent to throwing 5 cents out of the window—it's gone forever.**

8. Parcel post wagon picks up 11/12 and starts it back.

**Utilizing the energies of men in superfluous work saps the vitality of a nation in times like these.**

9. Clerk at post office cancels stamps and routes package.

**If prosperity is to continue, the ublic utilities and their employes ust not be burdened with non-sentials.**

10. Post office porter places 11/12 on mail wagon for delivery to train.

**The world cannot be fed and clothed unless each one helps correct the causes of railroad congestion.**

11. Railway mail clerk receipts for and sees that package is put off at destination.

**He who aids to clog the wheels of commerce, embarrasses a whole nation.**

12. Post office employees, horse and truck pick up package at railroad depot and carry it to nearest post office.

Every time human energy is diverted from useful employment, the world steps back instead of forward.

13. From post office another postal employee, horse and truck carries package back to jobber's warehouse.

A dollar frittered away through carelessness, is a dollar burned up.

14. Jobber's receiving clerk receives package and makes out receiving ticket in TRIPLICATE.

No man can add to another **man's expense of doing business, without adding to his own expense; the buck you pass comes back.**

15. Porter carries 11/12 back to jobber's stock shelves.

**Carting back today what was carted away yesterday, costs money, for which the man who causes that extra carting inevitably must pay.**

Digitized by Google

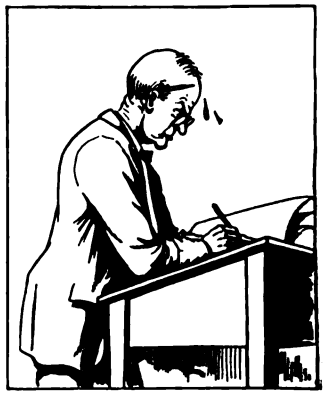
16. Boy takes copy of 11/12 receiving ticket to wholesaler's claim agent.

**Save an unnecessary step and you save tuppence; waste a step and you waste tuppence.**

17. Claim agent orders file girl to dig out original order.

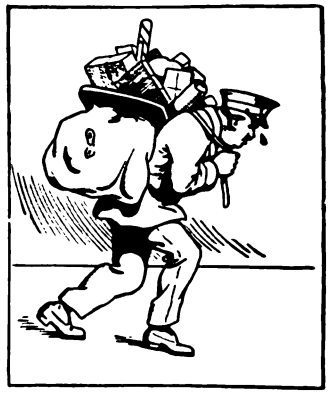
**When a man's time is consumed correcting other men's blunders, productive effort ceases.**

18. Claim agent calls stenographer to take letter to merchant explaining how the mistake occurred.



If the thoughtless could always see the mess they make and the trouble required to repair their thoughtlessness, I believe they would be ashamed of themselves.

19. Boy takes memo from claim agent to bookkeeping department, authorizing it to allow credit for returned merchandise.



20. Bookkeeper enters credit for returned 11/12.

**Business is a matter of motions; increase the motions and you increase the expense; decrease the motions and you decrease the expense.**

21. Credit memo made out and mailed to merchant.

**The sum of human waste, the result of carelessness, if gathered together each year, would represent a fortune whose size would feed the world for 100 years.**

**See What Was Wasted**

1. Merchant had to waste his time writing a letter calling attention to the error.

2. Letter carrier had to waste his time carrying that letter from postal box to post office; clerk at post office had to waste his time sorting and routing letter; cancellation clerk had to waste his time cancelling stamp on letter; truck, horse and man had to waste their time carrying letter from post office to train; train postal clerk had to waste his time seeing that letter got off at right destination; another man, horse and truck had to waste their time carrying letter from train to post office in city of destination; postal clerk in that post office had to waste his time routing letter to station of carrier who delivers it; letter carrier had to waste his time carrying letter from post office to address of wholesaler—a clean waste of the labor of 8 men, 2 horses and 2 trucks.

3. Merchant's clerk had to waste his time repacking 11/12ths not needed.

4. Merchant had to waste his time, that of girl telephone operator, in telephoning to post office to call for 11/12ths and that of the postal clerk who took the message.

5. Parcel post man, 1 horse and 1 truck had to waste their time carting 11/12ths from store to post office.

6. Parcel post clerk at post office had to waste his time cancelling stamps, weighing and routing package.

**Blocking Mails and Railways**

7. Railway mail clerk had to waste his time receipting for, watching and putting package off at destination.

8. Railroad had to waste its space transporting 11/12ths at a time when transportation is already horribly congested.

Digitized by Google

9. Postal employee at destination had to waste his time removing 11/12ths from car to parcel post wagon.

10. Post office had to waste the time of a driver, horse and truck to pick up 11/12ths at railroad and carry to post office and then another driver, horse and truck, their time to carry package from post office back to wholesaler.

11. Wholesaler's receiving clerk had to waste his time and stationery making out receiving ticket in triplicate.

12. Boy had to waste his time taking copy of receiving ticket to Claim Agent.

13. Porter had to waste his time carrying 11/12ths from receiving office back to stock room.

14. Claim Agent had to waste his time and that of 1 file girl digging up original order.

15. Stenographer had to waste her time typing dictated letter from Claim Agent to merchant, explaining how mistake occurred.

16. Eight employees, 2 horses and 2 trucks of the post office had to waste their time transporting that letter to the merchant.

17. Boy had to waste his time carrying memo to bookkeeping department authorizing issuing of a credit to careless merchant.

18. Bookkeeper had to waste his time entering credit in books for return of 11/12ths and making out credit memo to mail to merchant.

19. Eight employees of the post office, 2 post office horses and 2 trucks again had to waste their time forwarding that credit memo to Mr. Merchant.

**Actual Cost of One Error**

Altogether there was an inexcusable waste of the time and energy—that might otherwise be usefully employed—of:

37 MEN, 3 WOMEN, 2 BOYS, 8 HORSES AND 8 TRUCKS.

This error cost in dollars and cents:

| | |
|---|---|
| Time of 42 Men, Women and Boys at only 5c each | $2.10 |
| Time of 8 horses and trucks at only 10c each | .80 |
| Freight both ways on 11/12ths returned | .60 |
| Writing 3 letters, time, stationery, stamps etc., 20c. each | .60 |
| Merchant's telephone for parcels post | .05 |
| Total | $4.15 |

With loss of interest on merchandise in transit, risk of breakage, etc., added, there was thus a loss of $2.15 more than the total value of the goods shipped.

Who pays for this loss? You do.

But for inexcusable errors of this kind, the present business overhead would be lower and efficiency greater. If overhead is lower, you can do business for less money. If you can do business for less money, obviously you can make A LARGER PROFIT.

Therefore, and in conclusion:

Write your orders carefully.
Make them clear.
Look them over before you mail them.
Minimize errors.

---

## MERCHANT RESPONSIBLE FOR STATEMENTS IN HIS ADVERTISING

A merchant is responsible for the statements he makes as to the quality of goods he sells, whether he is merely repeating the statement of a manufacturer or not. It behooves merchants, therefore, to be certain as to the accuracy of descriptions which are given by manufacturers whose integrity might be doubted.

The retail merchant is held responsible morally and legally (in most states) for the accuracy of the statements appearing in his advertising whether or not he merely quotes representations made by the manufacturer from whom he obtained the merchandise. In an interesting case in Minneapolis a clothier was arrested for advertising all wool shirts which were not all wool but were almost entirely cotton. As a defense he brought into court his bills from the manufacturers, showing plainly that these shirts had been billed to him as all wool, and he merely advertised them in the same way. The court held that that was no defense; that he should have known whether they were all wool, and unless he was absolutely sure of it, he should not have advertised them as such.

Of course if the retailer has knowledge that the manufacturer is wrong, and he goes ahead with a misstatement, that is a fraud clearly, and even if a retailer hasn't knowledge that the manufacturer is wrong and quotes a manufacturer without making some effort to check up, the retailer can be held responsible legally. The retailer is looked upon by the buying public as a specialist and expert in the various kinds of merchandise which he sells and the public relies upon him to set out all of the facts truthfully with respect to his merchandise and holds him responsible—and has a right to hold him responsible. The public has a right to believe exactly what it reads in advertising and to act upon that belief.

The retailer is responsible for all of the statements appearing over his signature in advertising. If he does not know that they are misstatements, he should make it his business to know.

---

Instead of finding fault with the pessimistic attitude of the people with whom you associate, see what you can do to make them optimistic by showing your own optimism.

# Treating Customers Alike

**How Often Do Your Customers Have Such Experiences?**

"Joe, I wonder why that man walked out without being waited on?" Ed Miller was puzzled. "I intended to go to him in another minute; and I supposed he saw that I was busy."

Joe Bates, a genial traveling man and universal friend of store salesmen, paused a moment before replying.

"Well, Ed, he acted quite naturally. I believe I'd have done the same thing myself."

"What?" demanded the clerk. "Haven't you got patience enough to wait until a clerk finishes with another customer?"

"Yes, I always wait until he finishes with the customer ahead of me. But if he deliberately skips me, then I'm apt to walk out just as this man did."

"Then you think he left because I stopped to hand Mr. Smith that hammer?"

"I am sure he felt you were showing a preference in waiting on Mr. Smith first."

"But Smith was in a hurry," defended Ed. "And besides, it took only a minute."

"Perhaps this man was in a hurry himself; how do you know? And when you did not go to him, he had no chance to tell you. Instead you stopped to wait on Smith and left the other man waiting. Do you think that was fair?"

"No, " confessed Ed, "when you put it that way it doesn't seem fair. But I did it because I knew it wouldn't take a minute to sell the hammer; so I stopped to hand it to Mr. Smith."

"I know, Ed, you didn't intend to show partiality, but your action was easily misunderstood. You simply tried to wait on two customers at once. That generally leads you into difficulties. A customer demands undivided attention from the clerk, just as you wish it from the buyer. You cannot sell a man satisfactorily if he is trying to divide his attention between what you are selling and something else. When you obtain his undivided attention you generally realize results.

"The same way, the buyer likes to have the salesman show him the same interest in return. But if you attempt to wait on another customer while making a deal, you will find that the first party will suddenly lose interest and leave without buying.

"In this case you had a prospective customer who naturally should have received your services by right of priority. Instead you leave him wait until you accommodate another customer who came in afterwards.

**Wait on Customers Strictly in Their Turn**

"While you claim that the newcomer was in a hurry and you knew it would take but a minute, that does not help matters in the case of the man who walked out. He does not know the conditions which existed and all he had to judge by was your actions. To all appearances you evidently preferred to wait on Mr. Smith first. That made the other man feel that perhaps you were indifferent about his patronage."

"But I wasn't," protested the clerk. "In fact I had already started to go to him when Smith rushed in."

"Alright, after starting toward him and then stopping made it seem worse. The most you could have done was to at least go to him in his turn. Then if possible excuse yourself to hand Mr. Smith what he wished. In that way you could have explained that Smith was in a hurry and no doubt the man would have readily granted you the favor. Or on the other hand, if he was in a hurry himself, he would have had a chance to tell you and thus prevented any chance of a misunderstanding.

"Your intentions were alright, but it is easily seen that a customer cannot tell what a clerk's intentions are. All he can do is judge from your actions and attitude; and this man no doubt misunderstood your intentions.

**A Customer Lost for All Time**

"You see, he could not tell that Smith desired nothing else besides the hammer. He may have imagined that Smith would need several other things and that necessarily meant another long wait. So rather than bear what he considered an imposition he walked out of the store without buying."

"And the store lost a sale," added Ed.

"Yes, not only one sale, but who knows how many future sales? If this man went on down the street to another hardware store and received instant attention it will have a great influence on all his future purchases. He knows that at one store he failed to receive attention and at the other place he was treated with promptness and courtesy. Therefore, his future buying will go to the latter merchant,"

"You're right, Joe. I suppose I depended too much on speed. But trying to speed up a sale by splitting your attention never pays. You seldom please both customers and generally you displease both."

"That's it, Ed. But constant study of customers will give you foresight and ability to handle cases like this. There are men who don't mind being skipped and there are those who do. Now how is a clerk able to tell? He can't. All he can do is to work on the basis that all customers object to being waited on out of their turn. That is the safest rule to follow and it is the fairest.

Digitized by Google

**Giving Your Undivided Attention**

"All these points may seem trifling at first glance. But when you stop to think of it, they are the little things that all go together to make larger sales and create a better feeling between you and your customers.

"I know a clerk who has a reputation among people for his thoughtfulness. If a woman comes in the store and he sees that she is troubled with several small parcels, he kindly wraps them all into one bundle so they may be carried easily. This seems a small action in itself; but the customer always remembers, and on her next visit this lady waited patiently until this same clerk could wait on her.

"So the clerk who pays attention to these small details is the one who wins out. He will make it a point to give each customer his entire attention and see that complete satisfaction goes with every sale. And when he shows no preference or partiality in waiting on the trade, he will soon be recognized by his customers and they in turn will reciprocate by boosting his daily sales."

---

## DAN McGANN AND UNCLE SAM

Said Dan McGann to a foreign man who worked at the self-same bench,
"Let me tell you this," and for emphasis, he flourished a Stilson wrench,
"Don't talk to me of this bourjoissee, don't open your mouth to speak
Of your socialists or your anarchists, don't mention the bolsheveek,
For I've had enough of this foreign stuff, I'm sick as a man can be
Of the speech of hate, and I'm tellin' you straight that this is the land for me!"

"If you want to brag, just take that flag an' boast of its field of blue,
An' praise the dead an' the blood they shed for the peace of the likes o' you.
I'll hear no more," and he waved once more, his wrench in a forceful way,
"O' the cunning creed o' some Russian breed. I stand for the U. S. A.!
I'm done with your fads, and your wild-eyed lads, don't flourish your rag o' red
Where I can see, or at night there'll be tall candles around your bed."

"So tip your hat to a flag like that!
Thank God for its stripes an' stars!
Thank God you're here where the roads are clear, away from your kings and czars.
I can't just say what I feel today, for I'm not a talking man,
But first an' last, I am standin' fast for all that's American.
So don't you speak of the bolsheveek, it's sick of that stuff I am,
One God, one flag is the creed I brag! I'm boostin' for Uncle Sam."

## TRUE AMERICANISM

Governor Coolidge of Massachusetts earned the eternal gratitude of every true American who believes in the preservation of law and order in his stand in the police strike in Boston some time ago.

Here are some of the things Governor Coolidge believes in:

No man has a right to place his own ease or convenience above his duty to the state.

The action of the police in leaving their posts was not a strike, but desertion.

We cannot think of arbitrating the government.

The government of Massachusetts is not seeking to resist the lawful action or sound policy of organized labor. It is seeking to prevent a condition which would at once destroy all labor unions and all else that is the foundation of civilization.

We need more of the office desk and less of the show window in politics.

Let men in office substitute the midnight oil for the lime-light.

We need forever to remember that representative government does represent. A careless, indifferent representative is the result of a careless, indifferent electorate.

The people who start to elect a man to get what he can for his district will probably find that they have elected a man who will get what he can for himself.

Do the day's work. If it be to protect the rights of the weak, whoever objects, do it. If it be to help a powerful corporation better to serve the people, whatever the opposition, do that.

Don't expect to build up the weak by pulling down the strong.

Don't hurry to legislate. Give administration a chance to catch up with legislation.

We need a broader, firmer, deeper faith in the people—a faith that men desire to do right, that the commonwealth is founded upon righteousness which will endure, a reconstructed faith that the final approval of the people is given not to demagogues slavishly pandering to their selfishness, merchandising with the clamor of the hours, but to statesmen, ministering to their welfare, representing their deep, silent, abiding convictions.

---

The scientist isolates a single germ and studies it. Perhaps he makes that germ the pivot of important experiments. If you are selling goods or service. isolate the outstanding point or points of superiority, and stress them to the public. No one else will do your work for you in this particular, unless you do it yourself. And doing it may mark the difference between success and failure.

---

A needed friend is rarely a friend in need.

# The Woman Behind the Counter

**As a Member of the Sales Force She Will Bring You Women Customers and Her Taste Will Mean Dollars to You**

ADD a woman clerk to your sales force, Mr. Hardware Man, if you would increase your sales.

Did it ever occur to you that the glaring inequality in the sales of your various departments might be due to some deficiency in your sales force?

Are the sales in your household department keeping pace with your more strictly men's lines of hardware, such as tools, builders' supplies and the like?

Are women among your regular and frequent customers?

Pause a moment and take stock of the personnel of your sales force, and then of your patrons. Check up the latter—a man for a woman—a woman for a man. They should balance pretty evenly, for your shelves are filled with articles that help to furnish every home in the land.

You yourself are best aware that they do not balance. You have been casting about for the reason. It is simple. The next woman you meet will give you the answer off-hand.

A hardware store, from time immemorial, has been considered a man's store. Its wares are arranged by men and to suit men, and the overcrowded shelves of cooking utensils, the dark corner given over to crockery and electrical appliances might appeal to men if men purchased these articles, but it happens that the American woman is purchasing agent for the American home and the sooner the hardware merchant realizes this the better.

If women do not buy at your store they do not buy at the next hardware store down the block, but they walk two, four, or six blocks to the nearest department store carrying a hardware section.

Considering that women are more careful buyers than men and more particular as to where they buy, it is of the utmost importance to know just why they pass you up for the department store.

The answer was very cleverly found and acted upon by one of the leading hardware merchants of Iowa. Describing his discovery he said:

"I had naturally been carrying household goods—selling a lot, too—but not enough. My salesmen were efficient, polite and understood hardware. Yet I realized that my store was not patronized by women as it should be. Shortly after this I happened to pass through the hardware section of a large department store and found women selling not only the smaller household utensils, but stoves, ice chests and washing machines and putting up a convincing selling talk.

### Woman Heads Household Department

"That was enough. I looked about until I found a capable, intelligent woman and placed her in charge of the household department. We made changes to suit her—brought all the utensils pertaining to the keeping of a house in one section of the store, built a model kitchen, a section for demonstrations, arranged counters and display tables, and she did the rest.

**A woman understands the psychology of women better than mere man, especially when it comes to selling household appliances.**

Digitized by Google

**Most women like to be shown, and naturally a woman can explain the uses of anything used in the home better than a man.**

"Somehow, that department at once took on a homelike look. The chilly, aloof atmosphere was gone and it positively made you feel cheerful to step into it. Today she has a staff of several women clerks.

"Did it pay? Well, rather. A glance at my monthly accounts will prove that. Best of all, my store, for years catering to men only, has become as popular with the fair sex as a department store, and that's saying something."

What this merchant did, you can do.

Add a woman clerk to your sales force. Women like to trade where there are women clerks. One woman knows just what the next woman wants to know about the article she is buying, because housekeeping and home-making are common experiences among all classes of women and of perennial interest.

Do not forget that an intelligent saleswoman can create a homelike atmosphere and dispel that galvanized air in a hardware store which is always so distressing to women who invariably trade where things are congenial.

**The Cheery, Homelike Touch**

This is the prime reason why the department store is so popular. Even the British Drapers' Association during their recent tour of this country stated that the most important thing learned in their survey of American stores was the cheerfulness and capability of the American saleswomen.

Again—a woman is invaluable in suggesting attractive window displays and unique methods of showing goods. The blue and white enamel or the aluminum kitchen utensils, the heavy yellow bowls and the glass cooking dishes are wonderfully fascinating to every housewife, but not in motley piles on shelves or tables. Arranged in an interesting way with the proper setting no woman can resist them.

Her taste will also mean dollars to you in the arrangement of your garden tools, sporting goods and even in the display of your tacks and nails.

If she ties on a little price card, do not object—and bless her if she sets up a series of black figured price cards such as they have in the department stores. For women wander on from flour sieve to vacuum cleaner if they are guided by a string of prices—which they would never stop to inquire.

A saleswoman may also prove a boon in helping you select your stock of household goods. She has an intuitive knowledge of what the average woman will buy. She will regard convenience, price and where possible attractiveness of the article to be purchased. Women buy what pleases the eye, what fits the purse and what lightens labor. So, add a woman clerk to your sales force if you would increase your sales.

## THE "SING" IN MERCHANDISING

One out of every 100 people in the United States earns his living by retailing, according to Jesse M. Joseph of Cincinnati. In other words, there are more people in retail selling alone than in any other line of endeavor, except agriculture. Yet, after twenty years roll around out of every 100 who have embarked in retail storekeeping, less than five still have their names over the door.

The financial agencies show that 15,000 retailers fail each year, and 85% of them—12,250—did not advertise. Yet, the outstanding reason for the failure of more than 50% of these was over-buying. Over-buying means too much "stick-stock."

If profits lie in quick turnovers, and failures are avoided by having money in the bank—and advertising will not only dispose of surplus stock but also bring in the money to put in the bank. Not only the advisability but also the absolute necessity of advertising is apparent.

Some remember when there were practically no mail order houses. Some remember the time when all the mail order houses together (and it was less than 10 years ago) did not do 4% of the retail business in the United States.

Of the $15,000,000,000 worth of retail business done annually now, the mail order houses do $1,500,000,000—10%.

They do it by advertising.

The mail order houses and the department stores who advertise do more than 25% of all the retail business done in America and their proportion is growing all the time. Yet, altogether they only represent 30,000 of the retail stores in the country, or about 3%.

Advertising is that force which puts the "busy" into business and the "sing" into merchandising, and takes the "sin" out of both.

## KING OF THE SOUTHERN JOBBERS

Although the Southern Hardware Jobbers Association elected George D. King as their president, they are not returning to a monarchial form of government, but only recognizing the ability and accepted the leadership of one of the most faithful, substantial, long standing members of the Southern trade.

Thirty-five or forty years ago George King founded the King Hardware Co. at Atlanta, Georgia, and ever since that time he has been the active head of the institution, until now he is the leader of the whole Southern trade.

It is Mr. King's rather novel boast that in all of that time he has not learned the hardware business, but that he does make it his business to know men. He has studied men and knows them better than they know themselves sometimes. This has enabled him to create an organization to carry on the work successfully when he is away, and he seldom ever leaves his address when he is gone.

It is this same ability to know men, to work with them, to play on the right cord, that makes him a leader among his fellow hardware men in the affairs of the Association.

In his business he has made it his aim from the start to do more and better work than any member of his organization. It is this spirit on his part that has put him at the top of the organization, and no man gives closer attention to business than he does. He attributes his preeminent ability to work to his preeminent ability to play, and when he sees the danger signal of overwork, he goes to Europe, Asia, or Alaska for one or two months to engage in hard play and recreate himself for more hard work.

The King Hardware Co. was established in Atlanta in 1884, with an investment of $20,000. Since that time it has grown until now there is something over a million dollars in capital. The company has earned practically all of this increase for itself, and the growth and strength of the company are due very largely to Mr. King's efforts.

The King Hardware Co. was one of the first in the trade to break away from the staple lines of hardware. From the very start they realized the possibility for a jobber as well as a retailer dealing in such items as stoves, tinware, enamelware, watches and other goods not carried in the regular hardware stock.

"King-Bee" is a brand known throughout the South, and why? Because it represents an institution which is animated with a spirit of hard work, aggressive methods and the ability to know and please men. It is this spirit which has its source in the personality of George D. King.

## L. S. STARRETT'S 84TH BIRTHDAY

"Ad astra per ardua," the motto of the British Flying Corps, has become literally true in the case of Leroy S. Starrett, president of The L. S. Starrett Company of Athol, Mass., who recently celebrated his 84th birthday by a "trip to the clouds" at St. Petersburg, Florida.

## MARKETING HOUSEHOLD LABOR SAVING SAVING APPLIANCES TO THE HOME MANAGER

(By E. L. Bennett, Sales Manager, The Airway Co., Toledo, O.)

A number of years back, to be exact thirteen years ago, I was forcibly impressed, encountering an old-time house to house salesman trying to interest women in the purchase of an electric vacuum cleaner. And in those days selling a vacuum cleaner or a washing machine to the housewife was perhaps to be compared today with trying to interest a business man in the purchase of a commercial aeroplane for his everyday use. He, the business man, could comprehend that the near future, no doubt, would be provided with a much faster mode of travel, the aeroplane, but to him was only a vague idea, yet, he believed it was the coming thing.

So did the housewife believe that to save labor in her home some day she had to have an electric vacuum cleaner or an electric washing machine, ironing machine, etc.

Seemingly the price was prohibitive. In fact, like most all purchases of that kind she figured first cost. Not having been educated to the theory that such an appliance to cost, say, $75.00 or $100.00 should be spread over a term of years.

Today, thanks to worthy competitors, intelligent engineers and unselfish capital, we meet a different condition, i. e., instead of the housekeeper dressing up up like a nurse tending a contagious disease case, to to do the old-fashioned cleaning with broom and dust pan and trying to brush and beat and pound the rug in the back yard, we have on the market many creditable electric suction cleaners, and, in the past three years the manager had advantage of these privileges to review a number of striking proprieties to solve the house cleaning problem.

The dealer of today who sells labor-saving appliances is fortunately connected with twentieth century merchandising plans, developed by the manufacturer. However, many of our most ingenuous sales plans have been defined by the men on the firing line and the salesman or a house-to-house canvassman. Thanks to publicity he may take up most any magazine and find striking advertisements forcibly telling the housewife of the many ways to save labor in her home.

It was my privilege not long ago to call on one of our distributors in the middle West and witness a most interesting demonstration and sale of our cleaner in competition with a salesman selling Victrolas. The cleaner salesman argued that the Victrola was as necessary in the home as his cleaner; it performed a function necessary to the enjoyment of the family. He most forcibly pictured to the housewife the labor that she would save and money she would save by having her home thoroughly sanitary and satisfactorily cleaned by his cleaner and the saving, as compared to sending her rugs out and having them cleaned by a process which would not only pay for the cleaner in time but afford additional money to pay on her Victrola. As a consequence, owing to the salesman's forcible sales arguments, the lady of the house purchased not only the Victrola. but the cleaner.

Don't "give up the ship" simply because the housewife had purchased some new piece of furniture or any other appliance for her home. Women, today, are managing their homes as husbands manage their business, along mechanical scientific lines, and we are not sure but what the housewife is doing a better job managing her home than some business men managing the business.

We, as a company, through our sales department, try to impart to the dealer the necessity of not only having his organization well informed on our product, but to never be content to simply sell the housewife and let the sale drop after having received her money. The shrewd merchant will by all means make a friend of this purchaser in order to procure other sales.

A plan was put in effect by one of our dealers to have his electric shop associated in the minds of his community as a house of service. Nothing was seemingly too laborious for him or his organization to comply with, with regard to information and service to anyone. This dealer I have nicknamed a "Go Getter." He conceived the idea by putting in six electric sewing machines, nicely arranged on sewing tables and then sent special invitation to the Ladies Aid Society of one of his local churches, stating that they were at liberty to visit his store on this certain date and to bring their sewing. All churches do more or less for foreign missions, etc. He further stated that at noontime he was going to extend to them a buffet lunch. He took particular pains to arrange his store attractively, with articles displayed in such a manner that each of the ladies present might literally demonstrate these various articles.

For instance, in the center of the room was a rug, size 10x12 and at either end were two types of vacuum cleaners. The coffee that was served at luncheon was made in an electric percolator; the ices served were made in an electric refrigerating outfit; a very tempting dish was prepared in an electric chafing dish.

A report from this dealer states that the advertising derived and the actual sales were gratifying. Each of these ladies will always remember Mr. Dealer as an unselfish one.

### Human Nature and Satisfaction

To my mind selling is human nature treating with human nature, and we shall be confronted with two classes, those that are to be pleased and those pleased. Both are necessary and the firm and distributor's foe is the dealer who doesn't regard and is not able to ascertain the true meaning of satisfaction.

It isn't necessary at this time in the twentieth century to employ the old-time method of canvassers, approaching the housewife on the front porch and in order to hold her attention push the foot in the front door so that it may not be closed in their face. The dealer today operates his campaign for reaching the housewife in an intelligent manner, so forcibly that she cannot help but be interested and the salesman appeal to her.

There are many elements that make a successful merchant. I believe the first requisite is cleanliness, appearance, his ability to state quite forcibly a straightforward story, to be absolutely sold himself on his proposition, and to know the personnel of his company. To know just how far he may go with regard to promising service, to never promise anything to the housewife that he cannot back up. There are some dealers today who, in order to make sales, will promise anything and give nothing.

A bit of advice was given to the writer shortly after his school days from a man he believed in—his father. The advice that he gave to me that day I have never forgotten and which upon close analysis will fit any instance or case in any kind of business, anywhere:

### Sunshine and Diplomacy

First—No matter how thin the roof, the sunshine cannot penetrate, therefore it behooves us all to take this sunshine in the front door with us but never take it out; leave it there.

Second—That it takes two or more people to enter into conversation and make for all a quarrel. If you be the one, be the first to withdraw diplomatically and end the quarrel.

Too many salesmen today think only in terms of how much commission they are going to receive. They will not put their thought towards constructive selling. In other words, a quick analysis of your prospective purchaser and the determination to sell, these factors are necessary. Salesmen of these times are born and not satisfactorily taught. I believe it is impossible to take any man of the average type unless he be interested more or less in selling and materialize him into what is termed a "salesman."

Digitized by Google

To my mind the definition of a real salesman is simple, but I believe to have the true meaning that the word "man" should come before "sales," because after all it takes a man in more ways than one to be a true salesman. If he be a man first, he can acquire sales ability after. A good many of us could hitch the word "sails" to our men because we are quite likely to sail over matters that are seemingly trifles.

## GROWING SUPPLY HOUSE AT BOISE

The Idaho Hardware & Plumbing Co., Ltd., Boise, Idaho, is rapidly extending the scope of its organization, so that at the present time it is largely a wholesale institution. Representatives of the company call on the trade in southern Idaho and eastern Oregon, and if present conditions maintain and the growth of the company is as rapid as it has been during the past year, it will be necessary to double the sales force before another year is over.

The company specializes on its stock of sheet metal and mining supplies, besides plumbing and heating and general hardware lines. The officers of the company are as follows: J. D. Jones, president; J. R. Luck, vice president; R. K. Davis, vice president; S. T. Davis, treasurer, and W. H. Whyman, secretary.

## AIRWAY'S ATTRACTIVE ANTICS

Strange things happen these days. It's hard to believe some of them—but when a man shows a broken window, a big car, and a vacuum sweeper and tells you that he was demonstrating the sweeper in the window, the car standing at the curb on the outside, and the suction of the sweeper drew the car through the window—what are you going to tell him?

This is the story that's being told on "Shorty" Byers of the Up-to-Date Furniture Company at Pittsburg, Kans.

It seems the Up-to-Date had a window display of "Air-Way" vacuum sweepers, and a party came in to look at them. Mr. Byers was showing how the "Air-Way" will pick up money the same as dirt, when a 7-passenger care standing at the curb began moving towards the window, jumped upon the curb, across the sidewalk, bumped up against the stone foundation of the window and right through the plate glass front into the window.

The prospective customer is said to have written a check for the "Air-Way" and autoists are warned to chain their cars to telephone posts.

## THE LOST DISCORD

Seated one day at the organ,
I was waiting for Dr. Carl
To straighten a pedal passage
That tied my feet in a snarl.
I know not what I was playing,
But that did not worry me,
Though I struck one snag of music
Which was not in any key.
It flooded the crimson twilight,
With fears of a lingering death,
And floated away into silence
Before I recovered my breath.
It seemed the harmonious echo
Of filing a dozen saws;
It ruptured the golden silence,
Without any apparent cause.
I seek, but I seek it vainly,
That one lost chord of pain,
Which came from inside the organ
And drove me quite insane.

## MEN WANTED

If there ever was a time when real, true men were needed in public offices and in public life, that time is now. There is real need for business men instead of politicians in directing the government.

We have experimented with theorists, dreamers and idealists, and if we have learned anything from them we have learned a hundred times more things that we want to avoid in the future, and one of the most important is to beware of the shrewd scheming politician who, to hear him talk and interpret the thought of the people, possesses all the attributes of the superman—everyone who disagrees with him is of necessity vile and unworthy. Beware of him who is possessed of such scrupulous honor that if his every wish is not fulfilled he instantly condemns his opponent as wholly dishonest.

The majority should rule and any man, high or low, who thinks his commands must be obeyed merely because he says so, is surely doomed to be disillusioned.

God give us men; a time like this demands
Strong minds, great hearts, true faith and ready hands;
Men whom the lust of office does not kill;
Men who possess opinions and a will;
Men who have honor—men who will not lie;
Men who can stand before a demagog,
And damn his treacherous flatteries without winking!
Tall men, sun crowned, who live above the fog
In public duty, and in private thinking:
For while the rabble, with their thumb-worn creeds,
Their large professions and their little deeds,
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land, and waiting Justice sleeps.

—J. G. Holland.

## WESTERN WINCHESTER WOMEN

Among the officers and dircetors of the recently formed Women's Auxiliary of the National Association of Winchester Clubs, are the following women:

President, Mrs. J. W. Tilton, Carlisle, Ky.; first vice president, Mrs. F. B. Lomas, Cresco, Iowa; second vice president, Mrs. W. C. Cole, Bethany, Mo.; third vice president, Mrs. J. L. Smith, Sacramento, Cal.; treasurer, Mrs. W. R. Sloan, Logan, Utah; secretary, Mrs. S. W. Dimick, New Haven, Conn.

Board of Governors—Texas, Mrs. V. A. Kelley, Santa Anna, Texas; Louisiana and Mississippi, Mrs. J. T. Jordan, Kinder, Louisiana; Georgia, Florida and Alabama, Mrs. S. S. Brown, Rochelle, Ga.; North and South Carolina, Mrs. D. W. Richardson, Wilson, N. C.; Virginia and West Virginia, Mrs. R. E. Baldwin, Graham, Virginia; Arkansas, Mrs. E. E. Mitchell, Morrillton, Arkansas; Oklahoma, Mrs. J. U. Smith, Clinton, Okla,; Michigan, Mrs. Charles Gartner, Weingott; Minnesota, North and South Dakota, Mrs. A. J. Smith, Harriston, N. D.; Wisconsin, Mrs. W. E. Fitzgerald, South Milwaukee; Tennessee, Mrs. F. L. Spain, Murfreesboro, Tenn.; Kansas and Nebraska, Mrs. F. L. Klein, Beatrice, Neb.; Colorado, Wyoming and Montana, Mrs. A. L. Branson, Trinidad, Colorado.

At a recent meeting of the merchants of Washington County, Oregon, the popular proprietor of the Fendall Hardware Co., Forest Grove, Oregon, was elected vice president of the association, which was formed for mutual benefit and cooperation.

## A FAMILY OF FORGERS

Workers in all trades used to be organized in "crafts" or "guilds" and often skill in a craft was handed down from father to son, through generations. Thus whole families would be shoemakers, or weavers, or blacksmiths, or artisans at any other trade. The trade was hereditary and great skill and proficiency and pride were developed by the group.

GEORGE F. KONOLD, SR.

GEORGE F. KONOLD, JR.

**Shoulder to shoulder, back to back, they work enthusiastically together, making a fine team, and proud of their profession of "A-1 forgers."**

With the coming of machinery, the "guild system" was pretty largely abandoned, so that it is rare nowadays for a family from generation to generation to confine itself to a certain craft. When, however, an industry or trade or a profession is developed and passed along through the generations of a family, at the present time, it is all the more notable and very often such industry or organization is all the more solid and proficient.

As far back as the sixteenth century the Konold family have been identified with iron forging, generation after generation. For several centuries the seat of the family activities was Frankfort, Germany. About the middle of the last century, Christ Konold came to the United States as a lad 14 years old, and after working in Connecticut with the Collinville Axe Company, he moved to Pittsburgh in 1868, where he became one of the organizers of the Kloman & Berkley Company, tool makers. The company was soon reorganized as the Iron City Tool Works and Mr. Konold was superintendent.

His son, George Frank Konold, was born in New England in 1864, and like his father he grew up as an iron forger. When he was fifteen years old he went on duty in the plant of the Iron City Tool Works, first as a helper, then as a hammersmith and then through every branch of the forge industry. When his father died in 1888, he was 24 years old, and he succeeded his father as superintendent of the Iron City Works, holding the position for 23 years.

### Warren Tool & Forge Co. Is Outgrowth

The present Warren Tool & Forge Company was organized in 1911 at Warren, Ohio, by George F. Konold, his brother, M. J. Konold, and Jas. D. Robertson of Pittsburgh. These are the present officers of the company, Mr. Robertson being president, J. M. Konold, vice president, and G. F. Konold is the general manager and treasurer.

The company is known throughout the United States, and beyond its borders, as great manufacturers of picks, mattocks, hoes, hammers, sledges and other tools for mining and railroad work and blacksmithing.

George F. Konold is one of the leading figures in the iron and steel industry, for he is also an officer of the American Block & Mfg. Company, and the General Malleable Company of Warren, and is a director of Tri-State Foundry and Machine Company of Wellsburg, West Virginia.

Carrying on the tradition of the Konold family, his eldest son, George F. Konold, Jr., is at present secretary of the company and is learning the business to succeed his father. Two other sons are still in school, but we believe that they will prove true to the trust and heritage and take up the traditions of the Konold family as forgers.

---

## PROCTOR CARR WITH McDOUGALL-BUTLER PAINT CO.

McDougall-Butler Co., Inc., paint and varnish makers of Buffalo, N. Y., have just elected as vice president and treasurer, Proctor Carr, known in the saddlery trades, having been for many years sales manager and director of the U. S. Hame Company of Buffalo, and president for three years of the Associated Manufacturers of Saddlery Accessories.

From now on Mr. Carr will give his entire time to assist in the development and further growth of the paint and varnish business of the McDougall-Butler Co., Inc.

The company was founded thirty-three years ago, and has operated continuously throughout that period, enjoying a splendid reputation for the quality of its products and integrity in its relationship to the trade. It is to be congratulated in attracting to it and acquiring the services of Mr. Proctor Carr, who leaves a splendid record behind him in the saddlery field.

---

The Beasley Hardware Co., Stamps, Arkansas, has increased its capital stock from $10,000 to $25,000.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## PREPARING FOR THE DAY THAT MAY COME

Editor HARDWARE WORLD:

There is no question but that prices must eventually come down. How soon this will be none can forecast with certainty, but it is well for the trade to take into consideration that eventually probably all of us will have to share some loss when the market begins to recede.

**Wise Merchant Has Provided for This**

Do you know that the average jobber in normal times, especially where he is removed from the factories, has approximately $250,000 invested in goods which are in transit, bought and paid for, but not received? It would be more nearly correct to say that this amount now is from $750,000 to $1,000,000.

Another thing to be borne in mind is that the interest on one's investment is now on a basis of 8 to 8½ per cent interest, against the former rate of 5½ to 6 per cent. Now when goods begin to recede in price there is bound to be a loss. We, ourselves, have laid aside half a million dollars, knowing that eventually there must be a loss, and this is to take care of this inevitable loss.

But a growing business is a paying one, and in proportion to the business he does, the retailer must bear in mind that it is best to play safe, to keep his stock down to a minimum. Buy often as he needs the goods, but not load up, do not be influenced by larger discounts. Retailers are the safety valves of the hardware trade. They must not speculate for the welfare of the trade lies in their being sane, sound and solvent.

———— HARDWARE CO.

## MUST HAVE MATERIAL TO FILL ORDERS

Editor HARDWARE WORLD:

We have ordered and received sufficient material of all kinds to assure us of reasonable production for a year. While this may seem risky considering the high price of material and its threatening fluctuations, we conclude it is best to have the material and thereby continue manufacturing, as by so doing the orders received from our advertising and salesmen's efforts can be filled within reasonable time after receipt.

Salesmen's salaries and advertising costs are losses unless manufacturers reap the results of their work by filling their customers' orders within a reasonable time after received.

In order to prevent any lack of business coming to us in the future through a possible panic or general business depression in this country, we have developed a large export business all over the world on the theory that all countries cannot go wrong at one time. Consequently the aggregate domestic and foreign business assures us of volume and turn-over sufficient to use up the material contracted for and purchased and guarantees the employment continually of our workmen.

To sum up, we believe it best to obtain necessary material regardless of its high cost to assure production and delivery and also guarantee your business of volume and turn-over. The necessary volume and turnover of business can be obtained, by consistently extending the selling efforts to the foreign field. We realize that our policy may not be practical in all manufacturing businesses as the nature of the manufactured goods must be taken into consideration as regards both the usefulness and necessity of same. In our own business our policy as explained in this letter has proved very practical and brought ideal results.

Yours very truly,

MACHINE APPLIANCE CORP.,

Brooklyn, N. Y. Robt. H. Boylan, Mgr.

## BE READY FOR NEXT YEAR'S BUILDING

Editor HARDWARE WORLD:

Your letter of July 26th with reference to our views regarding the prices which should govern the trade in making their purchases and in placing their orders and specifications during the coming season has been received.

While the Trade News indicates that in some lines there has been a considerable recession in business with many cancellations, there has been very little indication of any change in the hardware business except that the orders are in smaller volume, which is seasonal and quite natural for this time of year.

With the large amount of unfilled orders on the books of manufacturers and the great need for buildings, some of which must be satisfied, it looks to us as though the wise course to pursue for the merchant, either retail or wholesale, is to endeavor to carry a fair stock of goods.

Very truly yours,

SARGENT & COMPANY,

New Haven G. F. Wupert.

## ORDER STAPLE GOODS WELL IN ADVANCE

Editor HARDWARE WORLD:

We look for considerable transportation difficulties, when crops really begin to move in large quantities. And we believe that there will be trouble of this nature simply because of the shortage of freight cars. This will mean that many wholesalers and retailers who do not place orders for immediate delivery will very likely have to wait considerable time later on before their requirements can be cared for.

We believe that it is advisable to order staple goods well in advance, for immediate delivery. While prices may fluctuate and probably will on some articles, it is much better to take this risk rather than to run entirely out of goods with the very probable disappointment of customers and consequent loss of trade.

Cordially yours,

Norwalk, Conn. CLOVER MFG. CO.

## CURTAIL CREDITS AND RESTORE DOLLAR'S VALUE

Editor HARDWARE WORLD:

Without a doubt the proper way for all merchants to handle their buying is to buy frequently and in small enough quantities to insure the largest turnovers on the smallest investments. Under present conditions, however, we do not think it possible for any merchant following this rule to have goods in sufficient quantities on his shelves to insure a sale of sufficient size to make his business profitable and, therefore, the proper method of conducting business a few years ago would not be practical at the present time. For all merchants must today take into consideration the scarcity of goods and the extremely poor service rendered by the railroads, and he should also go over his stock very carefully and quite frequently with a view of disposing of slow moving goods, for if he is unable to dispose of the poor selling items now we fear they will remain with him forever.

We have been doing business in an unbusiness-like manner as far as credits are concerned for some time and as a result a dollar of today is only equal to about 40c of 1914, and in order to get business on a substantial foundation the present value of the dollar must be increased and there is perhaps no better way to restore the dollar to its normal value than to curtail credits. However, there is plenty of money to take care of all business requirements, but speculation should be stopped.

Yours very truly,

BUHL SONS COMPANY,

Detroit, Mich. A. H. Nichols, Asst. Gen. Mgr.

# YOU CANNOT DO BUSINESS WITHOUT STOCK ON HAND

## A COMPREHENSIVE SUMMARY

Editor HARDWARE WORLD:

It is the selling possibility of merchandise that must govern the merchant in his purchase. This consideration must take into account the time feature of the carrying cost. To be sure, he must also consider the length of time required to secure deliveries. Orders placed afar off, with uncertainty of the time he may get delivery, are too frequently the cause of irreparable loss because of delays.

The slowness of transportation for long distances is another bugbear, liable to cause the same loss. Goods "in transit," with normal delivery delayed, are automatically adding to their own cost, independently of the danger of loss of sale when required by the ultimate customer. And goods on the shelves in advance of immediate requirements are likewise daily adding to their original cost. The tangible value of today is automatically greater tomorrow.

It is the jobbers' natural function to overcome these disadvantages, for the retailer he can recognize as being a customer. True, in some cases the jobber may place too high a premium on his "spot" small lot delivery, but this is an impossible rule, nor is it the policy that wins his success. His aim is normally to render service, to supply the dealer's wants instantly and at a reasonable self profit. This means turnover for both. It is natural cooperation, without which actual profits are not computable. If the jobber is guilty of overcharge because he can make "spot" delivery, he at once relegates himself into the justly criticized class of profiteers and speculators, and he cannot in his business afford this peculiar distinction.

**Jobber in Business to Help the Merchant**

His reasons are not altruistic—it is only by helpful cooperation with the merchant that he can fulfil his mission. In the purchase of goods it is his customers' wants he endeavors to gauge, and to prepare to supply at the moment and in the quantity desired.

At this strenuous time in securing supplies he is naturally far more likely to succeed in their obtainance than the individual merchant, and to this end he is fighting the retailer's battles. His stock is not liable to be over-full at any time—he doesn't want it overfull—and it is not the size, but the fact, of the individual order he prizes. It confirms his judgment, conforms to his mission. Small orders, cheerfully and expeditiously filled are his delight. Why? Because he is thus fulfilling his natural function, that of being the warehouse for the merchant's wants.

The manufacturer, holding in his hand the gauge, the jobber has placed upon the requirements of his customers in form of an order for the season's stock requirements far in advance of their necessities, is usually able to deliver the goods in ample time therefor, and the jobber's natural turnover is accomplished when he has supplied his customers' wants when wanted. He is more certain of thus supplying them if he can feel certain of the opportunity when the time arrives. This is natural cooperative merchandising, true to its intention and purpose. It is the quick turnover that makes goods literally "pay for themselves," and thus limits the stock-carrying necessity of the retailer.

**Don't Keep Ghosts on Your Shelves**

With regard to "clean up" on slow moving stock, the retailer should not lose sight of the fact that a dollar of profit earned now on goods he has carried for long, is likely to become two dollars when the purchasing power of the dollar has been restored to normal. Here enters the element of unforeseen increment which alone will be able to offset the losses sure to be incurred in carrying down to a lower valuation level his stock on hand. So the careful merchant will search out all such goods as have adorned his shelves too long and convert them into dollars at the earliest moment. In this connection recurs the thought that, like Banquo's ghost, will not down—the necessary general policy of a small stock, carefully selected, and frequent pick-up near at hand to meet the ever-changing demands of trade.

And now just a word about collections. Make them! Make them now while the making is, or ought to be, good. Reduce your ledger valuations as fervidly as other overstocks. To him who can produce something—anything—dollars are not hard to get these strenuous days, and he should pay you if in your debt. See to it that he comes to this frame of mind.

The Federal Reserve Bank has served a highly utilitarian purpose in its relation to mankind; that of practically absorbing the credit needs of a powerful nation during the stress of the most wasteful war that ever cursed human kind. Restriction of credit is now necessary to the bank. It might seriously affect your credit and ours. Make the collections.

Very truly yours,

FRED KRONER HARDWARE CO.,

La Crosse, Wis. E. J. Lewis.

## GRINDER MAKERS' COSTS INCREASING

Editor HARDWARE WORLD:

At present this is almost a paramount world question. Prognosticators and statisticians who make a business of markets are as extremely divided in their opinions as to future price levels as they can be. One will say, making perhaps a few exceptions, that prices are tending downward. The next one will advise that no panic can possibly ensue, that production is still short, and in such circumstances there can only result a continued price advance and a continuance of the "vicious circle."

The writer's experience, outside of our own particular line, is perhaps of not much value, but so far as our products are concerned every single item that enters into the make up of our goods is still rising in price. Our essential needs are grey and malleable iron castings, steel, miscellaneous metal products, abrasives, paper packing products and finally, but truly a large factor, labor. Let anyone try to contract for coke or pig iron or steel products for the next half year and they will readily find there is no possibility of a decline. All mills and blast furnaces are over-booked and transportation rates going higher. Abrasives are higher and harder to get and becoming more generally used all the time. Paper products were never as high or as scarce. In other words, the only possible chance for a decline seems to be with the last above named factor, which is labor. Of this we believe you can judge for yourselves, but our experience is that the temper of the laboring classes is such that they are not going to stand for any cutting of wages, particularly so long as everything else is on the up turn.

A general reticence in buying has prevailed for a few months now and merchants are at present carrying and buying smaller stocks than usual, due either to non-deliveries or anticipation of recessions. The result is bound to be another shortage and a howl from those who failed to cover when the winter and spring calls begin to come to them.

Our firm is expecting firm prices at least to the end of the year and possibly higher ones thereafter. The best we are hopeful for is that due to slackening up of the automobile trade and some luxuries that it will be somewhat easier for our purchasing department to secure what we need but without prices at any lower level.

To us the answer is obvious—buy soon and buy carefully, but surely buy early and at present prices and give the manufacturers and the transportation companies plenty of time to make deliveries.

Yours very truly,

LUTHER GRINDER MFG. CO.,

Milwaukee W. T. Hardy, Gen. Mgr.

## CLOSE BUYING AND CLOSE COLLECTIONS

Editor HARDWARE WORLD:

The general outlook and business conditions for the coming season is rather a hard matter to express one's opinions on, owing to the unsettled conditions at the present time. However, it is the writer's belief that all dealers should buy frequently and in small quantities. It is also imperative that collections be followed very closely and all bills discounted.

Very truly yours,

THE EDWARDS & CHAMBERLIN HDWE. CO.,

Kalamazoo, Mich. J. C. Ross, Sec. & Gen. Mgr.

## HEALTHY REPORT FROM NORTHWEST

Editor HARDWARE WORLD:

We are having a satisfactory harvest trade, but cannot help but notice that our customers are buying with caution, which is probably due to the tightening up of the banks and the thought that goods are going to be sold for less than present prices within a short time. The foregoing is from a retail point of view.

Our wholesale customers are endeavoring to replenish their stocks which have been low for some time, and there is a tendency to buy few and often of those articles which are offered by all jobbers for immediate delivery. Future orders are being taken on goods carrying a guaranteed price for later delivery. With the new freight rates there does not seem to be any rush to load up.

Little can be told of the future, and we feel optimistic that conditions will be adjusted in due time.

Yours very truly,

YAKIMA HARDWARE CO.,

Yakima, Wash. A. E. Darling.

## TEXAS JOBBER ADVISES FREQUENT BUYING

Editor HARDWARE WORLD:

We believe that the retail merchants all over the country should buy from their nearest jobbers anything and everything that they are in need of, buying in quantities only such as will last them for thirty days, buying often, paying bills promptly, unless they can discount, thereby saving their credit, and at the same time increase their turnovers, insuring the greatest profit on their investment.

We also urge them to push sales on slow sellers even if it will be necessary to sell the goods at cost to move them, for each number of months that these goods lie on their shelves costs them more than merely interest.

As to collections, we always have been cranks about this; and the closer collections are studied and followed the better, not only for the dealer, but the better also for the purchaser; as it will show both how they stand.

The conditions in southwest Texas are very good and we hope to harvest one of the best crops of corn and cotton that has been raised in years.

Yours very truly,

Laredo, Tex. A. DEUTZ & BROTHER.

## MIXES PRECAUTION WITH OPTIMISM

Editor HARDWARE WORLD:

We believe in "Business as Usual," we also believe in being conservative but can see no reason why business should not be good during the coming season and are preparing for it accordingly.

It is true that there are many disturbing elements at work tending somewhat to demoralization and the shortage of goods is a great handicap, but we believe that the merchant that uses proper precaution in handling his business will be rewarded in proportion to his deserts and skill in merchandising.

Very truly yours,

ROBERTS DEARBORNE HARDWARE CO.,

Carlsbad, New Mexico S. I. Roberts, Pres.

## USE OF TRADE ACCEPTANCE ADVISABLE

Editor HARDWARE WORLD:

With conditions such as are prevailing now, manufacturers being months behind on their shipments and in many instances having their entire factory outputs sold from six months to a year ahead, and the transportation system of the country having so woefully fallen down, we feel that it is a time if ever, when the dealer in the hardware trade should use his jobber.

It seemed to be the consensus of opinion among hardware buyers that general hardware commodities had about reached the peak of high prices when the railroad wage award was made, which will cause further advances in hardware costs. Aside from this factor, it is the general opinion that hardware prices have about reached the peak, and it would seem that it should be the policy of the dealer to buy in small quantities, ordering every few days if necessary, keeping stock low yet complete, to get the largest possible turnover on the smallest investment. The best way to do this is to make a close buying arrangement with the best nearby jobber.

We feel that this is particularly important to the dealer at the present time, for in the possible event of lower prices, he is not then caught with a big stock of high priced goods on hand, and if he doesn't buy frequently and keep his stock complete, he certainly cannot get the business, whereas, if he buys from a distance, it takes a long while for the goods to reach him, and after the orders arrive, he must carry a large stock, often many times too large. He should also make a special effort to push and get rid of slow moving goods, get them out of his stock, and be particularly careful in re-ordering.

Another especially important thing is to keep up his collections, and not let his customers get behind on their accounts. This is always good business, but has been made doubly necessary on account of the restriction of credit which is being urged and enforced by the Federal Reserve Banks.

We feel that it would be of great value to the dealer if he adopted the use of trade acceptances with his credit customers who have to be carried for accounts over the thirty day period, and for all purchases of large items.

This has already become a very widely used form of credit paper and it would seem that it is destined to come into very general use. I believe that the best definition of a trade acceptance is, that it is a bill of exchange, drawn by the seller upon the buyer, and accepted by him to be paid at a certain specific date. With this trade acceptance, the retail hardware merchant can arrange with his bank to handle it, and he can then get the money, so that through the general use of trade acceptances, he can often be actually doing a cash business, while furnishing his customers time accommodation. As he is responsible as an indorser of these trade acceptances, he must see that his customers thoroughly understand and will pay the acceptances when they become due.

Very truly,

PRATT-GILBERT COMPANY,

Phoenix, Ariz. P. R. Helm, Mgr.

### A MOST PROFITABLE INVESTMENT

We are renewing our subscription as usual for the HARDWARE WORLD, ourselves and employes. We just want to tell you that we consider our subscription to the HARDWARE WORLD a most profitable investment.

Our employes show a great deal of interest in it, and we can trace a decided improvement in our sales force, due to the business getting ideas and suggestions and helpful articles, both of a trade and general nature, that appears in your columns.

MONTANA HARDWARE CO.,

E. S. Woodland, Mgr.

## PAYS TO KEEP STOCK UP WITHOUT PLUNGING

Editor HARDWARE WORLD:

We have just gone through by far the largest year's business up to date that we have ever enjoyed, but this has not been done on a large turnover, as we find we are compelled to order farther ahead and in more liberal quantities than usual, in order to meet the demands of our trade.

We do not think that it is a good time for the retailer to plunge, but do believe that he should keep his stock well assorted and have no hesitancy in replacing items that he is out of.

We do believe it is a good time for the retail merchant to scrutinize carefully his credit accounts. This will have to be done with a measure of judgment, as there is any number that are now entitled to credit facilities.

The American public has evidently shortened the sail when it comes to buying luxuries. The real necessities we find they buy as they need them. With conditions the way they are, we think this is a wise plan for both them and retail mercnants to follow.

Yours very truly,

THE SMITH BROS. HDWE. CO.,

Columbus, O. J. A. Dury, Gen. Mgr.

## KEEP AVERAGE STOCK, BUT DON'T SPECULATE

Editor HARDWARE WORLD:

This question is perhaps one that is puzzling more merchants at this time than any other proposition they have to contend with. We do not anticipate any radical declines, in fact, do not look for very much lower market until such time as the railroads are enabled to handle the freight shipments of this country.

We fully believe that the present high basis of cost is largely brought about through the inability of manufacturers to ship their product. There is also the element of war tax entering in the cost and so long as present law is in effect it helps to increase the cost and has a large tendency to keep down production. If the railroads are able to finance and increase their equipment, giving better service for freight, we anticipate a decline in prices to considerable lower level than we have now, but with this condition facing us as it is we would rather think the best policy would be to carry an average stock and not expect much change in price for the next six months.

We notice a great tendency on the part of all merchants at this time not to buy, anticipating declines, which may result in everybody going into the market about the same time, without increased production. There may be a scramble for goods, which would increase market prices. We rather think it will be our policy to keep average stock, buying what we can pay for, but not go in debt or speculate.

Yours truly,

Kansas City, Mo. K. J. HURLEY LBR. CO.

---

The Rosenquist Hardware Co. has been organized at Osage City, Kansas, and their stock of general hardware, household goods and implements is rapidly building up.

---

One of the new institutions of the South is the Collins Hardware Co., Inc., 334 St. Clair St., Frankfort, Ky. The new enterprise has been incorporated with a capital stock of $25,000.00

---

Among the enterprising new hardware merchants at Los Angeles, California, are Chas. Ewan and F. A. Ehrmann, who have purchased the Saulsberry hardware store at 2107 East First Street. The new business will be conducted in conjunction with Mr. Ewan s plumbing business.

## EARLY VARNISH ORDERS WILL BE FILLED

Editor HARDWARE WORLD:

We are advising our trade to place their orders just as soon as they possibly can, in order to allow us to fill them. There are lower prices on only one of the items entering into the manufacture of varnish and paints—linseed oil. I find that every other item is going up.

Several firms who cater exclusively to the manufacture of bulk varnish have been able to reduce their price from 5 to 6 cents a gallon on account of the linseed situation, but any manufacturer who caters to canned goods trade should have raised his price already about 10 cents, just on account of containers—cans and boxes.

I find that several of the leading manufacturers have already had to advance their list prices and my factory is hanging on to the present list by main force and there is no telling when we will have to advance. Labor is the worst thing any manuracturer has to contend with at present and it looks to me as if manufacturers were deliberately discharging a lot of inferior labor with the result that the conscientious working men were now trying to give at least 75 per cent efficiency. Several manufacturers I talked to stated that they were now getting two or three per cent better production than they had heretofore, with 75 per cent of the original force.

The painters in New York were on strike for $10.00 a day and the several master painters with whom I talked were willing to give them $10.00 per day, but they had fully made up their minds to get 100 per cent valuation out of these men.

I, personally, believe that the wise retailer will get his order in early this year because there is no question but what a man has to have goods in his store in order to sell them and make a profit. My factory lost hundreds of thousands of dollars worth of business last year on account of the transportation tie-up and the sales which our dealers lost through our inability to deliver goods amounted to an awful volume.

Every one of our salesmen have been instructed to tell the retailers the truth about manufacturing and transportation conditions and advise them to get their orders in early and not worry about a decline in prices, because, while we naturally can't guarantee any such thing, there is no danger of it at all and they had better forget the bugaboo of a drop in the market and go ahead and make sales and profits.

Truly yours,

BOSTON VARNISH COMPANY,

A. L. Greene, Pacific Coast Mgr.

---

It is reported from Napa, California, that H. Schwarz, one of the principal hardware dealers, has purchased practically all of the Chinatown area, where modern warehouses will be erected in connection with the hardware business.

---

So great has been the business of the Merced Hardware Co. in both their hardware and implement lines that they have purchased a building adjacent to their frontage, which was formerly a saloon, and will convert this into a display room for farm implements.

---

Automobile accessories, household implements and builders' hardware will be the main lines for the Haydon Hardware Co., Hannibal, Missouri. The company is building up a complete stock at its new quarters, 217 North Main Street.

---

The Campbell Implement Co., Sidney, Montana, promises to become a most important factor in the inter-mountain trade. They have been capitalized for $50,000 and do a wholesale and retail business in auto accessories, farm implements and household goods.

## MEANS OF EDUCATION IN SELLING

There is nothing new under the sun. All that is, has been. Only the combinations of things are new, not the substance. This accounts for the repetition of ideas under varying forms.

Thoughts and the words which express them are as old as the brain of man. Indeed, they would be unintelligible in any speech if the counterpart of their substance was not present in every mind.

But thoughts do not always lead to action. Therefore, it becomes necessary to use an intellectual ignition system to communicate to the mixture of words and ideas under the compression of the will power the spark which releases their energy in work. This is the function of the trade journal. It is the ignition system of business.

If a man's wife tells him that he is handsome, he attributes her praise to the partiality of affection. If other men, however, assure him that he is endowed with talent and capable of big things, he is stimulated to greater effort and ambition.

Similarly, if the service of the trade journal as a means of education in the processes of merchandising is explained by the trade journal itself, the merchant or manufacturer is likely to think that it contains exaggerations due to self-interest.

Therefore, there is good sense in reproducing here the reasoning of a famous banker who counseled a hardware dealer to hire competent specialists to conduct the different departments of his store. When the dealer complained that he could not afford the expense of such employes, the banker showed him how he could procure the services of these experts at a cost per year of less than one day's wages.

### Experience Reduced to Paper and Ink

My dear fellow, he said, don't you realize that the experience of the brainiest men in the business world has been reduced to a matter of paper and ink?

What man has done is a matter of record. His failures, his successes, his experiences, his discoveries he has put on paper. These experiences cover every state—every county and town—while your personal experience has never crawled over the boundary of the town of your birth.

### Take Your Own Trade Paper

What does it mean to you? Do you know how to read it? Do you know what it is? A magazine? Yes, it is merely a magazine to the man who does not use it. It is very much like a mirror held up to the entire hardware field, in which he can see at a glance what the world is doing—not in one town, but in store and factory the world over.

### It Is a Sales Manager

It is a sales manager, handing him monthly written report of the most efficient and effective selling methods, selling ideas, and sales management. It is a sales manager that never sleeps—an employe that works everywhere and is always on the job.

It is an advertising manager, a credit manager, an agent helping him to find and train employes. It is a market barometer forecasting storms—predicting prosperity. It is a secretary that sorts the best from every line of activity and picks out the big news items and brings them to his desk.

In fact, no secretary could equal that service at ten times his salary and at a thousand times the subscription price and get the news so accurately, so promptly, and half so interestingly presented. Did you ever get that slant on the situation, my friend?

Your trade journal is departmentalized and covers every phase of your business. You can turn to any department and get in a few words and fewer minutes, information that you could not get personally in a year. And all this information is the sifted gold of a thousand dealers' experiences. Do you use it? If you did, every issue would come to you like an army of experts.

Because I am a banker and have no direct interest in hardware, don't discount what I am telling you. We bankers do other things than count change. If we did not a wooden Indian could hold down my job as efficiently as I do myself. We get that broad outside angle that you fellows with your noses down to your desks very often miss.

---

Now that vacation is over and we are facing the work of another year, what changes, what improvements, what better methods are you preparing to incorporate into your work? What weak points and what mistakes are you determined to correct?

---

The more needs you supply, the more goods they'll buy.

---

## KNOWLEDGE OF GEOGRAPHY WOULDN'T HELP

A Walla Walla HARDWARE WORLD subscriber vouches for this local occurence:

Rosie had an inveterate dislike of geography, and her teacher, growing impatient, sent Rosie's mother a note, asking her to see that Rosie studied her lesson. The next day showed no improvement.

"Did your mother read my note, Rosie?" asked the teacher.

"Yes, miss," was the demure reply.

"And what did she say?"

"Please, miss, mother said she didn't know geography an' she got married; an' Aunt Ella didn't know geography an' she got married; an' you know geography an' you're not married."

## THERE WERE REBELS IN 1833

Daniel Webster in the United States senate in 1833: "There are persons who constantly clamor. They complain of oppression, speculation and pernicious influence of accumulated wealth. They cry out loudly against all banks and corporations and all means by which small capitalists become united in order to produce important and beneficial results. They carry on mad hostility against all established institutions. They would choke the fountain of industry and dry all streams. In a country of unbounded liberty, they clamor against oppression. In a country of perfect equality they would move heaven and earth against privilege and monopoly. In a country where property is more evenly divided than anywhere else, they rend the air shouting agrarian doctrines. In a country where wages of labor are high beyond parallel, they would teach the laborer that he is but an oppressed slave."

## SPECIAL SATURDAY FISHING SALES

When the Wayne Hardware Company of Fort Wayne, Ind., found that its steel fishing rods were lying on the shelves and moving, if at all, with extreme slowness, the manager, C. E. Greer, evolved a rather unique idea of pushing them.

He made up "sets" of fishing equipment consisting of rod, line, reel, floater and artificial bait and placed the right lump price on the outfits. These prices ranged from $7.50 to $15. Then he inserted the following advertisement in the local newspapers on Thursday and Friday:

**Saturday Special of Complete Fishing Equipment Specially Priced**

For fishermen who intend spending Sunday at the nearby lakes, we have made up sets of complete fishing equipment, including steel rod, line, reel, floater and artificial bait. These sets include everything needed for enioying this great sport.

**The Price of the Sets is from $7.50 to $15**

Parents will be particularly interested in these sets, as by purchasing a set they can completely equip their children for the entire summer's fishing.

These Sets Will Be On Sale
Saturday Only
WAYNE HARDWARE CO.

As the result of the first insertion of this advertisement the company sold 25 sets and on every succeeding Saturday during the time the advertisement was run the sales were correspondingly satisfactory.

## NORAH KNOWS A THING OR TWO

A Los Angeles hardware jobber's wife said to her new maid: "You don't seem to know about finger bowls, Norah. Didn't they have them at the last place you worked?"

"No, ma'am," said Norah, "they mostly washed themselves before they came to the table."

## TYPICAL SUMMARY OF STOREKEEPING EXPENSES

Study this expense statement. It is a summary of the various items taken from a Cost Record Book. This statement is made up of reports from typical stores throughout the United States and represents the average costs in a typical retail hardware store:

| | | Percentages based on volume |
|---|---|---|
| 1. Rent | $ 900.00 | 3 % |
| 2. Light, heat, power and telephone | 150.00 | .5% |
| 3. Salaries, owner, help. | 3000.00 | 10 % |
| 4. Delivery cost | 150.00 | .5% |
| 5. Int. on capital, 6% | 600.00 | 2 % |
| 6. Ins., taxes, donations | 300.00 | 1 % |
| 7. Bad debts, coll. ex. | 150.00 | .5% |
| 8. Advertising | 300.00 | 1 % |
| 9. Depreciation of: Equipment Stock Repairs, renewals | 150.00 | .5% |
| 10. Merchandising expense: Breakage, spoilage Returned goods Reduct., mark-down | 300.00 | 1 % |
| 11. Supplies: Miscellaneous supplies for the store, stationery and office supplies | 120.00 | .4% |
| | $6120.00 | 20.4% |

Study this statement carefully. We do not mean that the various items of expense in operating your store should run exactly to these percentages, but this statement gives you an example of an intelligent cost statement showing what items enter into storekeeping expenses.

## STANDARD OIL READ THE BIBLE FOR OIL — NOT FOR REPENTANCE

The fact that the Standard Oil Company has discovered oil and is operating wells in Egypt is generally known, but its reason for going to that ancient land to look for oil is probably not so well known.

It is asserted that the attention of someone connected with the company was attracted by the statement in Exodus 2:3, that the ark of bulrushes which the mother of Moses made for her child was "daubed with slime and with pitch."

Reasoning that where there was pitch there was oil, and if there ever was oil in Egypt it was probably still there, the company sent out a geologist and oil expert to make investigations, with the result that oil was discovered.

Three wells are now in operation and others are to be opened.

## LOOSE LEAF LEDGER IN COURT

When a merchant has exhausted all amicable methods of obtaining a settlement with an obstinate debtor, and is compelled to seek the aid of the courts to force collection, the question of how to prove the account will be one of the first points for consideration. The account may be one that has extended over a number of years, the items may have been sold by various salesmen, and the merchant himself may have no personal knowledge of any of the transactions.

Upon this state of facts the merchant must rely upon his books to establish his claim, and if the latter fail him a recovery will frequently be denied. If he has been diligent in the keeping of his records the law will, at this point, come to his aid and permit him to prove the account by the introduction of his account books in evidence.

For it is well settled that a merchant may thus prove an account, providing he can show that his books are of original entries, made in the usual course of business, and contemporaneous to the sales to which they relate. They must, of course, in addition, be properly identified as to these points by a witness who is in a position to make such identification.

This rule is of such antiquity and so well established, that it has of late years been but rarely questioned. The attacks, such as they have been, have usually been predicted upon the question of whether or not the merchant seeking to introduce his records has really kept them in such a form as to entitle him to introduce them as "books of account."

The adoption in recent years of the loose leaf ledger, and card index systems of keeping accounts, have been attacked in the courts in several instances. The contention being that these methods did not amount to the keeping of "books of account," and therefore entries made by these systems were not admissible in evidence under the general rule. An interesting case of this kind was that of Haley & Lang Company in South Dakota.

Haley & Lang Company were engaged in the jobbing trade selling to customers through traveling salesmen, telephone and mail orders, and by direct dealings at their place of business. They sold goods to G. Del Vecchio, who operated a store, at several times, some of the orders being taken by traveling salesmen, others over the telephone. A dispute arose over the account which culminated in Haley & Lang Company filing suit against G. Del Vecchio in an attempt to collect a balance of $135.35 which the former claimed was due.

### Ledger Cards as Original Entry

At the trial of the case Haley & Lang Company, over the objection of Vecchio, introduced their card account records to assist in proving the account. They showed that their index cards constituted the only ledger accounts kept. That the entries on these ledger cards were made from the order sheets as they came in, being posted usually on the day following the receipt of the order.

Vecchio objected to these ledger cards being received as evidence contending that they failed to constitute a book of original entry. Arguing that the introduction of such evidence was not contemplated under the general rule which permits a merchant to introduce his account books, contending that if such evidence were permitted it would open the way for a dishonest person to manufacture evidence at will.

The case finally reached the supreme court for decision, and in passing on the points raised the court ruled as follows: "The evidence discloses that modern wholesale houses have adopted modern methods of bookkeeping, in which the day book and journal, once in common use, have no place in the system. The order from a customer comes in, and when approved by a credit man is passed to the shipping and bill clerks, who select and assemble the goods ordered from different departments of the house and check them out, and then the order, initialed or marked by those through whose hands it has passed, is handed to the bookkeeper, who formally enters the items in a book designated a 'ledger.' This book is the first complete and permanent record of the charges and credits in the dealings had between the house and the customer. * * * They are made about the times of the transactions and in the regular course of business. This book is the only permanent record of the dealings of the parties from which the status of a customer's account can be ascertained.

"The evidence in the case at bar shows that the ledger cards used by plaintiff in its system of bookkeeping constitute the original, permanent, and only records on accounts with its customers. This card system is substantially the same as a loose leaf ledger system of accounts."

The court held in effect that entries made pursuant to a card index system, all the other requirements being complied with, were admissible in evidence to prove an account under the general rule which permitted a merchant to prove an account by his book of accounts.

---

## EARMARKS OF SUCCESS

A Dayton HARDWARE WORLD subscriber advertised for a boy, and turned down one because of his youth, but he returned in a few days.

Merchant—"Aren't you the boy who was in here a week ago?"

Applicant—"Yes, sir."

Merchant—"I thought so. And didn't I tell you then that I wanted an older boy?"

Applicant—"Yes, sir; that's why I'm here now."

# Choosing and Moving Twist Drills

**Twist Drills are among the most important, as well as interesting, items that come within the stock and experience of the hardware trade. For the twist drill is a tool that is made by specialists, that must be sold by specialists, and it is specialists who use them. As an item in the hardware stock twist drills are of vital importance, because of the fact that a good drill gives profound satisfaction and brings a large volume of repeat orders. Large drill users look to the jobber and dealer who can supply them with a satisfactory twist drill as their benefactors.**

**Since handling twist drills is so important to the jobber and the dealer alike, we wanted to know the experience and the views of some of the larger hardware institutions. Here is the pith of the experience of Geller, Ward & Hasner of St. Louis, as summarized by L. T. Ward.**

**This institution is among the leaders in St. Louis, in fact in the Missouri Valley territory, and their own motto "Fastest growing hardware house in the West" is indeed being borne out in fact. The present seven story building is fast being outgrown by the increasing demands of their stock, and it will not be long before they follow the example of other great hardware houses of Missouri in increasing their space to meet new demands—Editor.**

(By L. T. Ward, Geller, Ward & Hasner Hdwe. Co., St. Louis)

We have come to consider twist drills from two standpoints.

First of all they are tools. As tools and as a very distinctive line of tools they require concentration and study. The buyer must know the twist drill thoroughly, he must know the needs of his customers and of his territory in the matter of twist drills, and he must know the item itself. The salesmen likewise must become twist drill experts, if they are to handle this item in the stock.

In other words, twist drills go to consumers who know very accurately what they want, and it is not a question of selling a drill, but selling the drill.

Secondly, we consider twist drills as sales propositions. Of course this second classification depends somewhat on the first. As any twist drill earns a name as a high grade tool, so it is almost necessarily a high grade sales proposition.

The twist drill that is to be satisfactory to the hardware dealer must be satisfactory both as a tool and as a sales proposition.

As tools, we investigate the twist drills from every standpoint, but particularly looking toward their accuracy and uniformity. Of the two, we believe uniformity is even more important. Can every drill in the gross be depended on equally? Will it do the same work under the same conditions? Can it be trusted for the important job? In the hands of the customer will it be just as safe as it is in the hands of the salesman or demonstrator?

Thus we try to pick a line of twist drills which maintains a uniform high average of quality, a line which is not remarkably good one month and away below par the next. Our customers must feel that they are buying a certified quality when they buy from us, and not jumpy, up-and-down, good-today-and-bad-tomorrow variety of goods.

In our territory we have made an investigation on this very basis. We have tried to seek out particularly the opinions of large users of various makes of twist drills. Competitive tests, conducted on a fair basis, have been a great help to us in our experience, and a guide in our appraisal of twist drills in general.

After a house has made a thorough investigation of this type, arriving very accurately at the opinion of the trade, it is safe to decide once and for all on the drill. The merchant will be convinced to his own satisfaction, and he will have obtained the views of the trade. He will know twist drills, both as tools and as sales propositions.

### Select the Most Accurate and Uniform

After the decision is once made, the selection of the most uniform is thereafter automatic. As a rule we find that the most uniform drill will also give the best turnover. It will bring to the merchant who handles it a greater prestige, a more satisfied customer, more return and repeat orders. The most uniform drill can be proved to have the lowest sales cost, and indirectly, of course, it will bring more customers for the entire line of goods.

Once a customer is thoroughly satisfied on such an important item as twist drills you can count on him as a satisfied and faithful buyer in all lines.

Another important consideration and deciding factor in the selection of the twist drill line is the service which the manufacturer can render. By service we mean not only in the matter of deliveries and the filling of orders, but sales service, in the matter of advertising specialties, advertising assistance and sales cooperation.

The manufacturer of the most desirable twist drill has service men and experts covering the field with jobbers' salesmen at all times, teaching the trade, and at the same time learning from the trade and getting pointers to be reported to the home office.

In general, then, twist drills are among the most important and most satisfactory item in the stock. They require concentration, they require specialization, they require close attention. Once the right twist drill is selected, once you stay with it, you will find that a profitable and solid department of your business has been established.

---

When you accept a job accept all of it.

## EVERY REASON TO ORDER VARNISH NOW

Editor HARDWARE WORLD:

We can see no reason for any decline in prices on our products. In fact, we are anticipating an advance on several of our items within the near future.

While there may be a little lower price on some of the raw materials that enter into the manufacture of our products, still the trend of prices on most of them at the present time is higher.

Containers of all kinds have recently advanced and the expenses of manufacturing are on the upward trend, as well as printed and advertising matter, and this with the advances in freight rates more than offset the slight decline on a few of the raw materials

We do not think anyone who has analyzed the situation thoroughly is seriously expecting a decline in price on our lines of goods, and we believe that dealers who delay ordering their present or future stock, anticipating lower prices, will be very much disappointed, and will ultimately have to pay higher prices.

Railroad conditions at the present time, receiving raw material and making shipments, are extremely poor, and the outlook for congested conditions on transportation lines this fall is greater than it was last winter and spring, and it behooves all dealers as well as jobbers to order their stock and anticipate their wants for the fall as quickly as possible.

I think if people like the HARDWARE WORLD would analyze this situation and put it before the dealers in the proper manner, that it would be doing them a good service.

If the dealers would only go to the bottom of the situation and analyze the conditions thoroughly they would see that there is more likely to be advances in prices rather than a decline.

Very truly yours,

BOSTON VARNISH COMPANY,

Boston. J. B. Lord, Pres.

## NEW SUPPLEE-BIDDLE PRESIDENT

William B. Munroe was elected president of Supplee-Biddle Hardware Company at a recent directors' meeting.

Mr. Munroe was born in Manville, Rhode Island on June 11, 1875. He got his first job as entry clerk in 1893 with Biddle Hardware Company, Philadelphia. From entry clerk, he went through the organization from department to department, learning the intricate details connected with the wholesale hardware business. He spent his evenings learning the retail side of the hardware business by associating himself with a well known Philadelphia retail hardware merchant.

He was with Biddle Hardware Company, Philadelphia, until November, 1906, when he resigned to associate himself with Simmons Hardware Company of St. Louis. He was in the credit and financial department under the direction of Geo. R. Barclay, first vice president of Simmons Hardware Company.

He returned to Philadelphia in February, 1919, to serve under the leadership of Mr. Chas. M. Biddle, his first boss. He served in the capacity of assistant to the president until his election as general manager in the directors' meeting of January, 1920, and at the same meeting was elected a director of the company.

His very close association with Mr. Biddle, and his years of hard work and constant application to details (not missing an opportunity to learn all about everything) brought its reward when Mr. Munroe was elected as president of Supplee-Biddle Hardware Company in the directors' meeting of June, 1920, at which meeting Mr. Chas. M. Biddle resigned as president to serve as chairman of the board.

His chief interest in life is his dear old mother. Mr. Munroe is a bachelor; his mother has seemingly been the inspiration which has sent him to the top.

## TEN PER CENT ADVANCE ON PAINT CLEANER JANUARY FIRST

Editor HARDWARE WORLD:

The writer would give as his firm opinion that the cost of producing high grade wall paper cleaner as well as everything we manufacture, is going to be higher during the fall and next winter than it has been for some time, in fact our cost of production is 20 per cent higher right now than it was last spring.

We sold several carloads of Absorene and HRH last month, in addition to many smaller orders which we have shipped in haste that the goods might get rolling before freight rates advanced and we anticipate that our best jobbers and dealers throughout the United States will buy Absorene and HRH for shipment on regular thirty-day terms during the months of September, October and November and not later than December 1st, with the expectation that most of this stock will be carried over by jobbers and dealers until next spring season as a good investment.

Our prices will advance after the first of January and we do not think the advance will be less than 10 per cent, as far as we can learn at this time what our future cost will be.

Our advice to every dealer and jobber in the United States handling Absorene is to invest as early as possible this fall in as much of our goods as he can afford to carry over until next spring; and we would be willing to wager that the investment will pay more than 10 per cent on the money.

Very truly yours,

THE ABSORENE CO.,

St. Louis, Mo. H. R. Henderson, Pres.

## SHE IS USED TO THE HIGH PLACES

The hardware trade is not as famous as the moving picture world for its leading women but one exception to the rule must be made in the case of Miss Ida M. Conklin, secretary to Frank A. Bare, president of the Tritch Hardware Co., Denver, Colorado.

Miss Conklin is every inch a secretary and what Mr. Bare does not know about the hardware business in the Rocky Mountain region Miss Conklin knows for him. Her wide awake interest in the affairs of her company has made her one of the moving factors that has caused the business to double in the last year. She may be justly proud of her share in the advancement just as every member of the Tritch organization may be.

The strain under which Miss Conklin works, and her importance in the smooth running course of the business earned for her a much needed rest this fall, and with her mother she spent five weeks on the beaches of Southern California.

When Mr. Bare or the executive of any other great institution tours the country naturally he is interested on calling on the trade, and although Miss Conklin's time was limited, during her recent vacation she found time to make many friends among the hardware people along the Pacific Coast.

## STANLEY SALESMEN IN CONVENTION

Representatives and salesmen for the Stanley Works and the Stanley Rule & Level Co. are back at their posts all over the country, refreshed and inspired by the recent sales convention at New Britain. This is the first combined convention for the two companies, which were consolidated during the year.

One of the features of the convention was an inspection of the Stanley Works by the Stanley Rule & Level Co.'s salesmen, and conversely the inspection of the Stanley Rule & Level Co. works for the Stanley Works salesmen. The convention was addressed by the officers of the Stanley Works along the lines of general policy, by the chiefs of manufacture along the lines of manufacturing processes and difficulties, and by the sales chiefs in conference over the coming year's sales policy.

## A NEGLECTED PAINT FIELD

Farm buildings are notoriously in need of paint. Possibly the reason is that paint dealers do not have an effective argument to offer the farmer as to why he should buy and use more paint. Apparently the argument that painting will improve the appearance of his buildings does not appeal to the farmer as it does to the average city dweller.

But it will be found that the farmer is just as anxious to save money or avoid loss as anybody. He is used to studying feeds. He has the problem of dairy feeds, pig feeds, poultry feeds, plant foods, etc.

Mr. Paint Dealer, try putting it up to the farmer that buildings die like animals; that a house or barn painted with good paint will last a hundred years; whereas, an unpainted one will fall to pieces in ten years.

There's a selling argument that will hit the farmer between the eyes; it strikes his sensitive pocket nerve; it shows him that he is wrong in thinking he is saving money by not painting his buildings—on the contrary, that he is losing it.

Sell the farmer more Building Food. He will be found an attentive listener to anything bearing on the farm food problems.

---

Many dealers dodge the proposition of carrying paint as a side-line, and yet we know of one dealer, living in a town of 3500, who buys a carload of paint each year.

---

A special sale that results only in getting rid of a lot of goods at prices that pay no profit has no advantages for the merchant, whatever it advantages for the public.

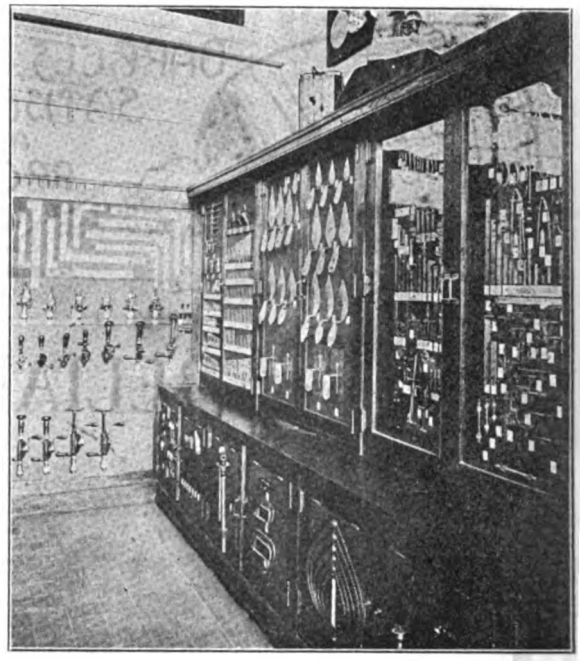
---

There is only one thing that men can pack as well as women ,and that is a theatre with a burlesque sign in front of it.

---

If all women who look back were turned into salt pillars, the streets would be lined with statues.

---



## CHRISTIAN RECIPROCITY

Once in a while the choirs are enabled to score off the minister. The minister announced, just after the choir had sung its anthem, as his text, "Now when the uproar had ceased."

But the singers bided their time patiently, and when the sermon was over rose and rendered in most melodious fashion, another anthem beginning, "Now it is time to wake out of sleep."

---

Ray B. Thomas, proprietor of the Canon Hardware Co., Canon City, Colorado, recently sold a half interest in his business to Prof. G. A. Cleland, who was formerly superintendent of schools in Canon City. The trade can therefore look for great things from the Canon Hardware Co. with its combination of academic learning and good common sense.

One of the combined show and stock cases in one of the new Winchester Stores. The sample goods on the outside of the case indicate not only what is in the case, but what is desirable in the tool line. The tools can be kept in perfect order with a light coat of colorless varnish and frequent oiling.

## STYLES AND STANDARDS

The world is full of folks of many minds. A woman buys a gown or coat because its exclusive and perhaps the only one of that particular style made. A man favors originality in dress, which is only a matter of doing it differently from the other man. To note the styles among the different hardware stores one would judge that the only thing that mattered was, not to be like your competitor whose shelves should contain the same goods, displayed in the same way (the best way), but alas, what a vast difference.

If goods are displayed better in one way than the other, why are you not doing it? If certain goods make more money for you by being given a prominent place in the front part of the store, why do you have them hid behind the stairway? It all resolves itself into this. Are you trying to become a better merchant and build a bigger business? Are you aware of your shortcomings and are you willing to seek information and assistance when you need it? Look around your store, are you perfectly satisfied and do you feel it is now as convenient and as efficient as you wish it? If not, write your State Secretary. He can help you.

---

By practicing intelligent self-help you help your fellow mortals.

---

Just because you have a good opinion of yourself is no reason why you should have a poor opinion of others.

## LINOLEUM HIGH—SELL FLOOR PAINT

Paint dealers are missing a grand chance to sell more floor paint. Rugs, carpets, linoleum, oil cloths and all floor coverings are very high in price now, and it's a very common thing to see kitchen and oftentimes dining room and bath room floors bare.

These floors should be painted with floor paint, and it should be an easy matter for any paint distributor, by means of well directed newspaper ads, to double his trade in this specialty.

Every dealer knows the arguments in favor of painted floors; dealers, or at least a good many of them, have simply overlooked the fact that psychological conditions now favor a campaign to increase sale of floor paints.

## BOSTON VARNISH CO. ERECTING LARGE ADDITION TO PLANT

Editor HARDWARE WORLD:

It will doubtless prove of interest to your readers, particularly those who are now acting as Kyanize agents as well as to those who contemplate accepting our agency proposition, that the Boston Varnish Company has taken the bull by the horns and in order to forestall any production difficulty that might occur, due to our largely increased business, we have now broken ground for a substantial new addition to our plant and offices. The new addition, when completed, will approximately double our manufacturing facilities and at the same time our office space will be increased to almost double its present floor space.

The contract for the new building has been placed, and the foundation laid. This fine addition to the plant will be completed early in December of this year and will be ready for operation, with complete equipment installed, at that time.

The business of the Boston Varnish Company has increased to such an extent during the past year, and the popularity of Kyanize varnishes and enamels is growing so rapidly, that this new building is absolutely necessary in order to maintain production at the necessary point.

The addition to the factory is a modern, four-story brick and cement structure of up-to-date fireproof construction, and the new office building will conform to the lines of the present office structure and be equipped with the latest time and labor-saving devices so that the clerical end of our business can keep pace with the rapidly moving manufacturing department.

Our sales force has been augmented by the addition of several new men this year and after the very enthusiastic sales convention which was held early in August the men have shown that they went forth with the proper spirit and are now turning in some very attractive orders for early fall delivery.

As soon as the new plant is completed we anticipate a largely increased trade which, with the new factory equipment, we will be able to handle with dispatch and promptness. Kyanize dealers who place their orders in ample time are thus assured of early delivery on their spring requirements.

Yours very truly,

BOSTON VARNISH COMPANY.

C. A. Dana Redmond, Adv. Dept.

---

The Stewart Moore Hardware Co. has been formed at Puyallup, Washington, through the purchase by Fred Stewart and W. A. Moore of Anacortes of Perfield Bros. Hardware Co. In this connection it is an interesting fact that the Perfield Bros. purchased the store nine years ago from Mr. Stewart.

## VAN DERVOORT PUTS CARDS ON TABLE

The Van Dervoort Hardware Company, at Lansing, Michigan, doing both a wholesale and retail business, is an institution that believes in laying its cards on the table, being absolutely frank with the public and keeping customers well informed concerning the conditions of the business.

In a series of bulletins published in a local newspaper, they write frankly of the problems they face in handling their business, of the difficulties they encounter in securing their stock, with any opinion that the company considers important on public, political or national affairs.

Thus as a company, the Van Dervoort institution places a definite personality before the people of Lansing. The announcements of the company are read as closely as an editorial, for they contain opinions, they contain sidelights on the news of the day, and on business conditions. By its frank, confidential stand, the Van Dervoort Company gains the confidence of the buyers and of the business community, so that the goods which are announced in connection with the advertising are known to be genuine and the prices just and fair.

We are reproducing in miniature some of these bulletins, so that the trade may see just what kind of advertising the Van Dervoort Company does. We could not recommend any advertising course more strongly than this. Eagerly read by the community, it inspires both confidence and interest and it gives a definite personality and public respect to the institution. What more can you expect advertising to do for you?

## MORE ODDITIES OF WORKMEN'S COMPENSATION LAW

(Copyright by Elton J. Buckley)

Inasmuch as workmen's compensation was a new department of the law, and for the first few years would be in the making, I have made it a point to keep in touch with the decisions of the various States in order to see how far the law would go in executing the most excellent idea which lies at the bottom of workmen's compensation, viz: that where a man is injured or killed in the course of his employment, keeping him and his family from starving to death ought to be considered a public duty and figured in the cost of doing business, which is borne by the public in the mass.

Probably every reader of this article is subject to the workmen's compensation law of his state, and he will therefore be interested in the report of some recently decided cases. These cases show that the law has widely departed from the original idea of workmen's compensation, which was that a man who caught his hand in a machine on which he was working, or was hurt by the explosion of chemicals which he was handling—in other words, where he was the victim of some accident growing directly out of his work, he should be compensated by workmen's compensation insurance. Read the few sample cases which I report and see what a difference there is between the original principle of compensation and the one enforced now.

It is remarkable how close the States are in workmen's compensation cases. Recognizing that they represent, as I have said, a new phase of the law, they have evidently felt the need of deciding their cases along the same line. Therefore, the following cases practically represent the general law:

**Case No. 1**

In this case an employer had a man who delivered goods. While at his regular work he had an epileptic fit—he was subject to them—fell to the ground and fractured his skull so that he died. His employer contended that he was not responsible for compensation insurance, because epilepsy was not an accident, but a disease. The court, however, held that the driver was entitled to compensation.

**Case No. 2**

In this case another delivery man, while out on his route, was overtaken by a storm, from which he sought shelter. While there he was killed by a lightning stroke. The court gave him insurance.

**Case No. 3**

A man employed about a wholesale house lifted some heavy stuff one day, this being his regular work, and strained himself. Some time afterward he died of an abscess on the back. This case was fought hard, but the court finally held that the abscess might have come from the strain and allowed insurance.

**Case No. 4**

Two employes of the defendant concern got to fighting one day, and one was seriously injured. The fight grew out of an order which the injured man had properly given his assailant, and which the latter resented. One finds it hard to see where the employer was in any sense responsible for this, but the court, nevertheless, held that he was and made him pay the injured employe compensation.

**Case No. 5**

In this case also a driver figured. The delivery wagon was horse driven, and one day while the driver was standing over the horse, the animal threw up his head and struck him in the face. It appears that at this time the driver was suffering with syphilis, which, he claimed, was made worse by the blow. Eventually syphilis destroyed one of his eyes. The court took this view and made the employer pay.

**Case No. 6**

A manufacturer of proprietary goods employed a demonstrator to show goods in a department store. While proceeding to her place she tripped over a torn rug and fell heavily, doing herself considerable damage. At first the referee said this accident did not arise out of the employment, but the court reversed him and made her employer pay her $7.50 a week as long as her disability lasted.

**Case No. 7**

Two competitors did business in very friendly relations in the same town. One day one of them was short a man and borrowed one from the other. While doing the work for which he was loaned, on the borrower's premises, the employe was overcome by gas and killed. At first glance it would appear as if the dead man's regular employer should certainly not be held responsible for this, since the accident didn't even happen on his premises. Nevertheless, the court said he must pay $10 a week for 500 weeks.

These cases and many others like them show that the courts now strain a point to protect employes from about anything that may happen to them during working hours, whether it had any connection with the real work or not. If the injured employe is in his working hours, and engaged in, or at or near his regular work—he need not even be on his employer's premises—he is apparently entitled to claim compensation from his employer if anything happens to him.

# *On Cook's Evening Out*

When Mistress turns cook, then is the time she appreciates most the beauty, durability, and utility of her Mirro Aluminum.

For this handsome ware is not only a shining invitation to use, but it is a real aid to better cooking. Mirro is light to handle, and easily cleaned. And, as it takes heat quickly and holds it long, it is a fuel-saver also.

The features of convenience which have contributed so much to the fame of Mirro Aluminum are the result of nearly thirty years' experience in designing and making better aluminum ware.

Note the features of this Mirro Convex Kettle:

(1) Handle-rest ears hold bail in three positions and prevent it from coming in contact with sides of Kettle. (2) Tightly rolled, sanitary bead, free from dirt-catching crevice.

(3) Inset cover prevents boiling over. (4) Bead of cover upturned, thus protecting against steam and liquid. ☆(5) Rivetless, no-burn, ebonized knob, an exclusive Mirro feature.

(6) Convex sides prevent contents from pouring off when liquid is being drained. (7) The famous Mirro finish.

☆(8) Famous Mirro trade-mark stamped into the bottom of every piece, and your guarantee of quality throughout.

This trade-mark is comparable to any symbol of master-craftsmanship, whether that symbol be on precious porcelain or hand-wrought silver.

Look for Mirro Aluminum at the leading stores everywhere.

Send for miniature catalog.

***November Pictorial Review, Delineator, and Designer*** **are magazines that will carry the above advertisement of Mirro Aluminum, full page size. Look over these magazines when they appear, and note that the Mirro page is about the most conspicuous advertisement in the book. Every reader sees it. That is one of the reasons why millions of women buy Mirro.**

## TRADE SHOULD PUT STOCKS IN ORDER WHILE CONSUMER DEMAND IS TEMPORARILY LIGHTER

Editor HARDWARE WORLD:

The most valued thing in the management of any business enterprise is common sense, coupled with an intelligence to properly apply it to any question.

The present apparent slow-down in some lines of business is largely due to the fact, in our judgment, that the newspaper headlines respecting deflation, tight money, etc., have finally impressed the buying public, with the result that they are now proceeding cautiously. This, we believe, is a healthy condition, for it gives the manufacturers time to eliminate some of the congestion in their plants; it gives the wholesalers and retailers time to gradually put their own stocks in order so that when a revival of purchasing by the public does come (and we believe it is sure to come, due to shortage of goods in every direction) everybody will then be in shape all along the line, from manufacturer to retailer, to take better care of the demand.

Therefore, it would be our thought that the wholesaler who finds his stock low should place his orders for a reasonable quantity, bearing in mind that congestion with manufacturers is not relieved over night and bearing further in mind that the railroads are not moving freight promptly and, as cold weather comes on, will move it less promptly, all of which means that a merchant who would serve his customers should always have a reasonable amount of surplus stock.

### Thinks Labor Will Be Efficient

We do not believe prices are going any higher, yet we cannot see how they will be much, if any, lower, in any line, because, in the first place, labor will object to any reduction in wage, nor do we feel it should be asked to accept a reduction at this time. On the other hand, we believe labor will become more efficient in the creation of articles, with resulting economies in cost, which, sooner or later, will be reflected in the retail price, but not to a great degree.

In some lines prices are sharply off, in other lines prices will likely go higher, but, as an average thing, we believe an evening-up process is now taking place, which will cause further stability, resulting in continued confidence and business activity.

We are advised by leaders in the financial world that there likely will not be any recession of present high money rates until after the turn of the year, although it is felt the peak of the demand for money will be reached the latter part of September or in October, after which there should be a gradual let-up.

### Thinking Good Times Will Make Them

The business of this country is sound, hence, if everyone cooperates and puts forth every sincerity of effort to disseminate optimism and to decry pessimism, trade volume should continue its onward march. Activity in business is nothing in the world but psychology and its ebb and flow rests entirely on the mental attitude of the individual citizen, which is to say, if the citizen, or consumer, is optimistic, he or she buys that which his or her pocketbook can afford. Per contra, if pessimistic, rigid thrift and economies result, which would naturally lessen the demand for finished goods, which, if not overdone, would be a good thing at this particular period of congestion, but, if continued, it inevitably leads to stagnation, with lack of employment to thousands, and once started it is likely to continue—for how long we would not care to hazard an opinion.

The necessity for goods is present because of a shortage; therefore, if everyone exercises the proper application of common sense and, hand in hand with it, approaches the coming season with confidence, and, on the way preaches optimism, we should have a continuity of business activity. This should be very easy to do because we are citizens of the greatest nation under heaven and any business man who sells America "short" (as one of our prominent bankers once expressed it) will likely go broke in the end.

Respectfully yours,

BENJAMIN ELECTRIC MFG. CO.,
Chicago. J. H. Fall, Jr., Vice Pres.

---

**TRITCH HARDWARE LIVE WIRES**

We had hoped to personally introduce each member of this hardware organization to our readers by name, but due to the fact that there are a number of feminine readers among the HARDWARE WORLD subscribers, it may have been a part of wisdom that their names were not given lest some private correspondence might ensue outside of office hours.

Still we know they are most loyal, and nothing could tempt them to remove from the mile high city. The president of the Tritch Hardware Co. assures us it is a "Bare" fact that he is willing to wager any amount that no other institution has a more loyal, enthusiastic or intelligent organization of live wire co-workers and associates than he is fortunate enough to be surrounded with.

When it comes to a matter of pulchritude, this photo shows they are in a class by themselves.

# Apply Your Selling Energy Where There Is Least Resistance

WAVE upon wave of national advertising has created nation-wide consumer acceptance for the Benjamin No. 92 Two-Way Plug.

By the end of 1920, twenty-seven of the country's foremost magazines will have carried 136,000,000 messages telling about the utility of "two uses for every single socket" through the use of the Benjamin No. 92 Two-Way Plug. Consumers know *why* "every wired home needs three or more." They have been told, "At Your Dealers."

Dealers are furnished many sales helps to carry the idea along for their own greatest profit. Three two-way plugs has been made the unit of sale—3 for $3.50 in the handy three-in-one carton, or the alternative $1.25 each, making every sale worth while. A quick turn-over is assured, and double uses for every socket then creates sales for other electrical appliances.

As one of the few electrical devices nationally known by name, the Benjamin No. 92, the *original* Two-Way Plug, encounters the least sales resistance imaginable.

Apply your driving force where there is least resistance. Your jobber will supply you with Benjamin No. 92 Two-Way Plugs in any quantity.

## NO SOLUTION UNTIL LABOR COOPERATES

Editor HARDWARE WORLD:

The policy that should govern the trade during the coming months is of extreme interest to everyone, and perhaps the answer to this question is as obscure, or more so, than any other which has confronted business for some time.

Of course, the manufacturer is extremely interested in this question, for the simple reason that he is ordering his material and supplies and making provision for his labor in exactly the way in which he believes that this question should be answered for the manufacturer, and the jobber, and the retailer, and the consumer.

Recently we read in the bulletin of the American Hardware Association, an opinion expressed by a committee appointed to investigate conditions, that they believe efficiency is increasing to some extent. We question this very much, although our own operatives have been interested for some time.

Until labor shall realize that employers (or capital, as that class is generally called) are not going to expand further to any great degree and until they shall realize that capital will not worry about production in the face of falling markets, there will not be any solution of the problem apparent.

Unquestionably, there has been unwarranted liquidation in many lines, but nevertheless, there is a definite trend to a decline of prices.

**Cost of Production Still Rises**

Prices will not decline in our line to any considerable extent. In fact, they will increase, if anything, only so far, of course, as labor, supplies and material increase.

Manufacturers (generally) will be expected to accept smaller margins of profit and, undoubtedly, this will be necessary; but the manufacturer no longer cares whether his force is held to the work in which they are most efficient or not, and it is simply a question of how best he can operate and finance over a very difficult period in the next two years, until labor shall begin to cooperate.

Jobbers have held up payments, have cancelled goods, and generally shot the standing of the manufacturers' schedules in no mean way, and it will take some few weeks to get these schedules readjusted.

Our suggestions to our buyers would be that they order for the next six months' shipments at the end of three months and six months and that they cover themselves for normal requirements at regular prices.

Yours sincerely,

FRANK MOSSBERG CO.,

Attleboro, Mass. F. T. Chase, Sales Mgr.

## CHICAGO AUTOMOTIVE SHOW IN NOVEMBER

Preliminary arrangements have been practically competed for the annual show of the Automotive Equipment Association to be held in Chicago this fall. The show will be held at the Coliseum for the week beginning November 14th. This is the first time the show has ever been held in the Coliseum, and the equipment of the American Railway Appliance Co. has been leased for the week. The A. E. A. annual show is held at the time of the November convention of the Association, and is a feature in the accessory trade, equalled by no other event during the year.

T. A. Mitchell of the Mitchell Mfg. Co., representative for such manufacturers as the Legalite Corporation, Ashland Mfg. Co. and others, is making a six weeks' trip through the Northwest. Mr. Mitchell's friends throughout the territory are always glad to receive him as he covers the trade, and the volume of business developed for the manufacturers he represents is a testimony of his pleasing personality and his four-square business policy.

## CORCORAN WESTERN MANAGER

The constantly increasing demand for Peerless Guaranteed Products for Fords and the swiftly expanding business of The Corcoran Manufacturing Company in the western territory, has caused The Corcoran Manufacturing Company to appoint Mr. Rex H. Finney as Manager of Western Sales, with headquarters in Denver, Colorado. Mr. Finney will personally travel the middle West and western coast states and western Canada.

Mr. Finney was an old retail accessory dealer himself—going from that business to the accessory jobbing business—for years being active in the organization of the Hippee-States Co. of Des Moines, Iowa.

Mr. Finney thoroughly understands the Peerless line and is in position to intelligently enlighten the trade as to the "ifs and ands" of this nationally advertised line of radiators, fenders, hoods, tool boxes, etc., for Ford cars.

## GELLER, WARD & HASNER'S AUTOMOTIVE CATALOG

Typical both in size and completeness of Geller, Ward & Hasner Co., at St. Louis, Missouri, is their new automotive equipment catalog No. 18, consisting of over 250 pages. The company are exclusive distributors for Hood and G & J tires and headquarters for a full and complete line of automotive equipment. It is certainly their justifiable claim that the new catalog offers the most complete and best selected stock for the territory that their salesmen serve. The latter pages of the catalog contain tables showing the proper size spark plugs, tires, brake lining, mufflers and other accessories to go on each make of car. The catalog is also crossed-indexed. No appropriate price list was issued for the catalog, due to the unsettled condition of the market. The company contemplates issuing a list as soon as conditions are more stable and prices are established.

The Henning Hardware Co., Hillsboro, North Dakota, is erecting a new warehouse to house its enlarged stock.

Christian & Herman are the proprietors of the former business of Ellerback & Hale at Beatrice, Nebraska.

Rummel & McMillen are the new owners of the former McWhirter Hardware Co. at Cleveland, Oklahoma. Edward Rummel is manager of the new business.

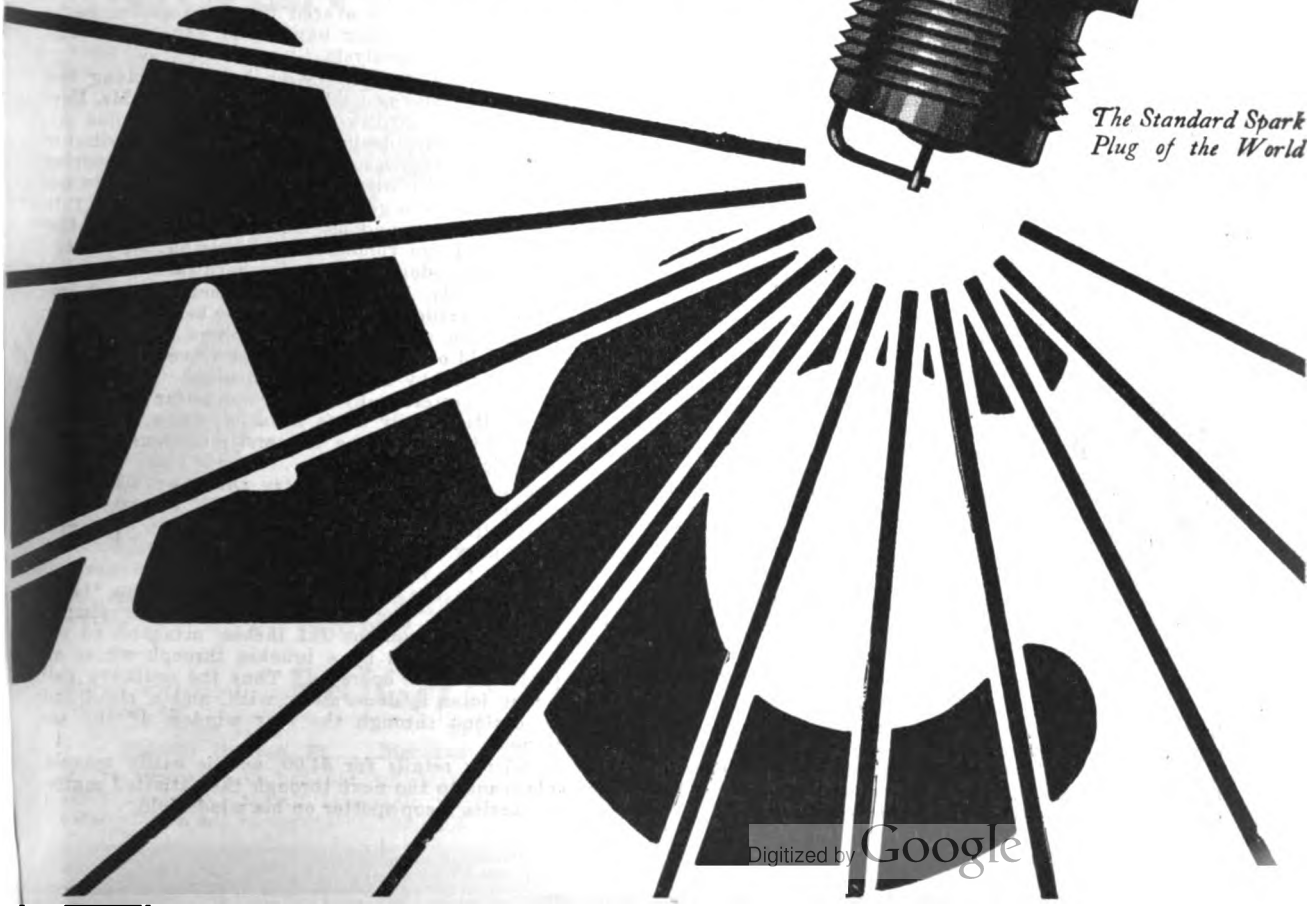
**These time-shattering road records, established by** three Essex cars, are further evidence of the matchless dependability of AC Spark Plugs. The AC Plugs that fired the engines of these cars were unfailingly reliable in their service. In the two transcontinental runs of 3,347 miles each, every driving condition was encountered, yet the AC's functioned perfectly. They were equal to the exacting demands of high speed, mountain climbing and long, tortuous pulls through sand and mud. Like the manufacturers of the record-smashing Essex and other fine makes of passenger cars that use AC Plugs as standard equipment, dealers who sell AC's can be sure that AC's will do all that is asked of them.



AC's have proved this time and again in the most punishing tests. If you do not stock the full AC line and are not profiting from AC achievement, write today for dealer information.

## OPTIMISM MAKES SUCCESS SUCCEED

**Editor HARDWARE WORLD:**

We believe that both the wholesale and retail trade would be acting wisely if they placed orders now with shipping specifications for the coming season, for the reason that from all indications prices on general commodities will not decrease materially for some months.

Of course where sellers guarantee protection against decline in price of goods to be shipped or goods in the buyer's stock, a policy which we think is unsound, the advantage of buying now is very much greater than where protection against decline in price is not guaranteed.

Our reason for believing that the policy of guaranteeing against decline in price of goods shipped or to be shipped is unsound is because we do not think that any seller should stand this burden when the buyer does not reimburse him for the difference in price of merchandise on hand when prices increase. It is a poor rule that does not work both ways.

Regarding the matter of sellers guaranteeing protection against increase in price, we do not believe that sellers as a whole are in a position to know what will happen in the labor and material markets and therefore the accurate cost of finished goods is entirely unknown for the future. However, sellers, we believe, are in no position to judiciously guarantee against an increase in price.

There is one thing that we are doing in our sales organization throughout the United States and that is to talk, think and live optimism because there is nothing quite so catching as optimism and it overcomes the more or less trade "habit" of talking pessimistically at certain seasons of the year in this industry.

Someone once very wisely said: "Nothing succeeds like success." And we have added to this a few words which make this quotation read this way: "Nothing succeeds like success—and nothing makes success succeed like optimism.

Very truly yours,

AMERICAN HAMMERED PISTON RING CO.

Baltimore, Md. Walter P. Coglan, Gen. Sales Mgr.

## BLACK & DECKER COMPLETE CATALOG

Black & Decker general catalog No. 2, just off the press, as the trade would expect, is typical in every respect of the general style and standard of Black & Decker literature as well as Black & Decker products.

Artistic completeness and technical minuteness have been combined in making the new catalog an entirely satisfactory treatment of the Black & Decker line. With its reputation based upon quality and its argument that reputation of the maker is the very best guarantee of any goods, the editors of the catalog have set about picturing the Black & Decker products and selling the Black & Decker organization and quality.

The equipment is carefully illustrated and described in detail, and prices are quoted on all models, sizes and types of Black & Decker machinery. Those who have not already received copies of the book and every automobile accessory dealer and distributor should have it, may secure it by applying to any one of the Black & Decker branch offices, as well as to the general office at Baltimore.

---

Otto Lee has purchased the interests of Judge Kunzman in the Blythe Hardware Company at Blythe, California, and will now join his brother in the management of this active and growing concern.

---

The Jackknife Windshield Company recently celebrated the opening of its new factory at Georgetown, near Seattle, Washington, with a reception and entertainment which 5,000 people attended. From now on, the company will operate on an enlarged scale and supply a rapidly developing eastern demand.

## HOLDS THE MIRROR UP TO DRIVERS

E. C. A. Berger has come to be known as the "cop-spotter of the accessory industry," and very naturally, for Mr. Berger, besides being general manager of Berger & Co., manufacturers of Copspotter rear view mirrors, is also one of the best informed and wide awake personalities in the western accessory trade.

In this case the "cop" is not only for officer of the law, but the coin of the realm, so besides being a cop spotter, Mr. Berger may be termed a "copper spotter."

His seven years contact with the automobile and accessory business have taught Mr. Berger several trade axioms. In fact he discovered these principles early for himself, and his later experience has only borne him out in his first analysis.

From the very start, when he traveled among the members of the trade as a salesman on the road Mr. Berger used to tell the hardware dealers whom he called upon that the hardware dealer was the natural distributor of autombbile accessories, and that some day accessories would be principally distributed through the hardware trade. As years have gone by, Mr. Berger has seen this prophecy come more and more into effect until at the present time a large volume of the distribution of cop-spotter mirrors is done through the hardware trade.

Another of Mr. Berger's trade principles, most important to the trade, is the fact that he believes strictly and sincerely in selling through jobbers. Cop-spotter mirrors are sold only through jobbers, so very naturally they are handled by all Western dealers. Mr. Berger himself is a westerner by birth, and a far westerner by choice. His family home is in St. Louis, Missouri, and he was educated at the University of Pennsylvania as an electrical engineer.

Going west to find a country that was as big as his ambitions and his own outlook he gravitated toward Southern California, and was connected with the automobile industry from the start.

Berger & Co. was organized nearly two years ago to manufacture the cop-spotter, as well as the "Berline" autowline. The cop-spotter itself is a simple, strong, plate glass mirror 3x7 inches, attached to the top of the windshield by a bracket through which an adjustable quadrant operates. Thus the ordinary ball and socket joint is done away with, and a rigid and reliable outlook through the rear window of the car is obtained.

The mirror retails for $4.00, and is easily salable. One sale leads to the next through the satisfied motorist who carries a cop-spotter on his windshield.

## HOW MUCH WEIGHT WILL A TIRE CARRY?

Recent action of the Society of Automotive Engineers made a revision of the table of carrying weights for tires of various sizes. The wise merchant will caution motor car owners and tire buyers against buying tires that are undersized, and suggest that the scales be consulted before accepting casings. Note the following means for determining the weight each tire should carry:

Run the front half of the car on the platform scales, then the rear half. The weight carried by each tire will be half the respective amounts registered.

The approach to the scales should be level and, if reasonable care is exercised, the total of the two operations will be within 20 or 30 pounds of the weight of the car when all of it is upon the scales.

The following table shows the maximum weight permissible on each tire and the various pressures recommended by the Society of Automotive Engineers:

CORDS

| Size of Tire | Load on Tire | Inflation Pressure |
|---|---|---|
| 3½-inch | 520 lbs. | 40 lbs. |
| | 560 lbs. | 45 lbs. |
| | 600 lbs. | 50 lbs. |
| 4 -inch | 700 lbs. | 45 lbs. |
| | 750 lbs. | 50 lbs. |
| | 800 lbs. | 55 lbs. |
| | 850 lbs. | 60 lbs. |
| 4½-inch | 960 lbs. | 50 lbs. |
| | 1020 lbs. | 55 lbs. |
| | 1080 lbs. | 60 lbs. |
| | 1140 lbs. | 65 lbs. |
| | 1200 lbs. | 70 lbs. |
| 5 -inch | 1350 lbs. | 55 lbs. |
| | 1420 lbs. | 60 lbs. |
| | 1490 lbs. | 65 lbs. |
| | 1560 lbs. | 70 lbs. |
| | 1630 lbs. | 75 lbs. |
| | 1700 lbs. | 80 lbs. |

FABRICS

| Size of Tire | Load on Tire | Inflation Pressure |
|---|---|---|
| 3 -inch | 350 lbs. | 40 lbs. |
| | 375 lbs. | 45 lbs. |
| 3½-inch | 465 lbs. | 40 lbs. |
| | 500 lbs. | 45 lbs. |
| | 535 lbs. | 50 lbs. |

| | 1500 lbs. | 85 lbs. |

H. E. Burt has purchased the plumbing business formerly conducted by H. P. Fuller at 7526 Sunset Boulevard, Hollywood, California.

## IT PAYS TO ANALYZE EXPENSES

The shrewd merchant looks over his statement of Storekeeping Expenses and see in it not numberless channels of waste, but rather a series of justifiable expenditures. He realizes that if there were no Expense there would be no Gain; that to make money he must spend money.

This spending that there may be a positive return is investing, and the far-seeing merchant considers the items in his expense statement as investments calculated to earn for him.

He also knows that his value to the community is in exact proportion to the degree of Service that he renders, and that the dollars he spends in rendering that service are Service Investments calculated to produce steady dividends. He, therefore, scans his statement of storekeeping expenses to make sure that his business is properly equipped to do the job.

"Yes," he remarks, "rent is justifiable. I must have a store, a good store, clean and attractive. Without that my trade would vanish.

"My store must also be well lighted, heated in winter, well ventilated in the summer.

"The payroll—that's all right. I must have good help and if I could get another man like Jim or another fellow like Fred I could double this business.

"Insurance—by all means. I must take no chance on fire loss, and besides the insurance policies in my safe are a safeguard of my credit.

**Advertising Protects the Entire Investment**

"I must have advertising. The boys are good salesmen and we must keep bringing the people to the counters so as to get them into personal contact with our salesmen, our goods, our store. We must keep telling the people what an excellent store we have and how our goods match their needs."

And so he goes down the list, analyzing the relation of one item to the other, checking the evidences of proper service equipment. He knows that they are all necessary investments, that without this investing there would be no return, and his principal job becomes that of intelligently supervising and coordinating these elements, applying these tools of profit-making effectively.

The man who begrudges the bait never makes the catch, and the store which does not consider business getting items in its expense statement as the seed of larger business and larger profits, is on the road to diminishing returns rather than growth and prosperity.

Advertise your store, your service, your goods.

W. E. Galley and F. E. Smith, both of Canon City, Colorado, have purchased the Feldmeier Hardware Company at Grand Junction. The new firm will be the Galley Hardware Co. Mr. Galley is an up-to-date business man and is well known to the trade in Colorado.

## RESERVATIONS SWAMP SECRETARY WM. M. WEBSTER

Reports from the office of Secretary Wm. M. Webster of the Automotive Equipment Association, indicate that the busiest days that the office have ever faced were those immediately following the mailing of space contracts for the National Accessory Show in November.

The contracts were placed in the mails so that they would reach each member on the same day, no matter in what part of the country he was located. On that day the telegrams began to arrive thick and fast, and it is reported that a procession of messenger boys was crossing the threshold of the association.

Although the Chicago Coliseum has been engaged, it may be a task to place all the exhibitors who have reserved space.

## A. D. FAIRBANKS, JR., HEADS THREE COLORADO COMPANIES

Among the "big" men in the hardware trade in Colorado is Arthur D. Fairbanks, Jr. Mr. Fairbanks is not only big in the institutions with which he is connected, but big also in the diversity of his interest in the hardware trade.

For some time western merchants have known the Delta Hardware Co., Delta, Colorado, of which Mr. Fairbanks is president, as well as the Colorado-Utah Hardware Co., at Grand Junction, an important wholesale house, of which he is also president. His newest enterprise is the Montrose Hardware & Implement Co., which has been organized at Montrose, Colorado, with a capital stock of $50,000.

It is an interesting fact in this connection that Mr. Fairbanks, is a native of Montrose and although his enterprise has taken him away from his native city, it has always been his ambition to return and identify himself with the hardware trade there. Thus the new enterprise is an answer to a long standing ambition on the part of Mr. Fairbanks.

It is only natural that the people of his native city will recognize this tribute to their needs, and the business of the new company will grow by leaps and bounds. A special building is being erected, with the latest installations and improvements. Particular stress will be laid on service and repairs in the implement line, and several exclusive agencies have already been contracted for.

## EMPLOYES BUY BLACK & DECKER STOCK

The Black & Decker Mfg. Co. have applied the co-operative system in industry by issuing $250,000 in 8 per cent cumulative stock for the benefit of their employes. The owning of this stock is being made easy for employes by arranging long time payments, the longer the employes having been with the firm, the better their terms for purchasing stock.

Since the factory was moved to Towson Heights, near Baltimore, a typical industrial family community has grown up, and the sale of stock in the company to employes is but a natural result.

The growth in gross sales has reached the million dollar mark during the past year. The company is not placed in the position of asking help from its employes, but rather of offering them an opportunity and an advantage which their work and loyalty have partly created.

John F. Chamberlain, representative of the Whiton Hardware Company and the Pacific Net and Twine Company in Alaska, is generally hailed as the dean of commerical salesmen in the far Northwest territory. Recently he celebrated twenty years' service in Alaska, and it is claimed that he has traveled more miles in Alaska than any other salesman who has ever visited the territory.

## AUSTRALIAN SALES AGENT NOW IN U. S.

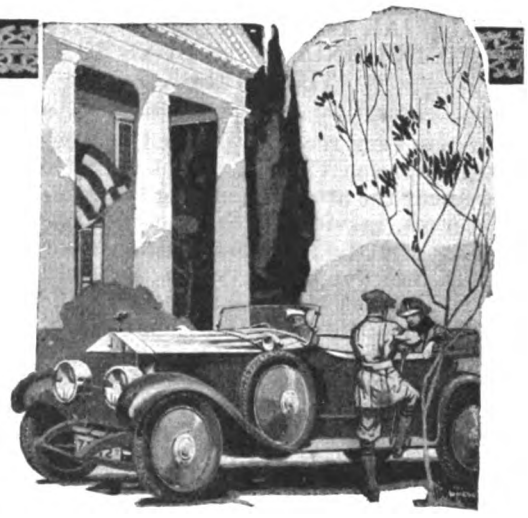
It is not so very frequently in meeting men of the trade that one is impressed with how much a man knows about hardware, therefore, it is a particularly novel sensation to meet a man from abroad who gives us an impression of knowing hardware from a to z, not only the situation in this country, but the foreign situation.

A. W. Stitt is one of the best informed men in Australia and New Zealand in hardware, not only on the hardware situation in his country, but on the world hardware market.

In order to do business in Australia, as Mr. Stitt points out, one must know the hardware market of the world. Australia buys hardware just as well as she buys her other supplies, from the world market, some coming half way around the globe from England, such articles as aluminum coming from India, and other articles coming from other foreign countries just as they can be bought to advantage.

It should be particularly interesting to American manufacturers who are interested in the Australian market to know that Mr. Stitt will be in the United States for some time. The A. W. Stitt Co. are manufacturers' agents and importers and exporters in Australia, and Mr. Stitt has opened an office at 311 California Street, San Francisco, where he is making arrangements to represent new American lines, as well as selling some Australian lines in the United States.

There is an excellent opportunity for tool lines, particularly in Australia. Now that the soldiers have returned from the war, the country is all but stripped of tools and there is a great demand. Mr. Stitt will be pleased to communicate with any manufacturers in the United States who desire the ablest representation in Australia.



The Dewey Hardware Co., Kenosha, Wis., is reported to be prosperous and happy in its new building, where they are specializing on auto accessories and a full tool line.

The Summerill Stove Repair Works has been organized at Ogden, Utah, to manufacture stove parts. The members of the company have repaired stoves for years in Ogden, but have not manufactured their own repair parts until the present time.

## NOW LEGAL TO REFUSE TO SELL A CUSTOMER UNLESS HE BUYS SOMETHING ELSE

(Copyright by Elton J. Buckley)

A case very recently decided by the United States Supreme Court has not attracted anywhere near the attention among the trade which it deserves, in view of the fact that it finally legalizes a method of doing business which has been in use for many years, but which the Federal Trade Commission declared illegal, in that it constituted unfair competition. The method I refer to consists of refusing to sell a customer unless he agrees to buy something else. This was in common use before the days of the anti-trust laws, but the Federal Trade Commission has always taken the position that it was illegal, and has prosecuted a number of concerns for using it.

The decision of the Supreme Court leaves the trade in every line free to use this method, provided there is no question of monopoly. For instance, a concern which had a monopoly of gasoline could not refuse to sell gasoline to a customer except on condition that he buy oil as well. But where there is no monopoly, the Supreme Court says there is nothing illegal about it.

This case was an appeal from a decision of the Federal Trade Commission that Warren, Jones & Gratz, who dealt in steel ties for binding bales of cotton, had been guilty of unfair competition because they refused to sell ties to customers unless they would also buy jute bagging from them. The Supreme Court went deeply into the meaning of unfair competition, and said that nothing could be considered unfair competition which was "never heretofore regarded as opposed to good morals." I quote the following from the decision:

The words "unfair method of competition" are not defined by the statute, and their exact meaning is in dispute. It is for the courts, not the Commission, ultimately to determine, as matter of law, what they include. They are clearly inapplicable to practices never heretofore regarded as opposed to good morals because characterized by deceptions, bad faith, fraud or oppression, or as against public policy because of their dangerous tendency unduly to hinder competition or create monopoly. The act was certainly not intended to fetter free and fair competition as commonly understood and practiced by honorable opponents in trade.

Count one alleges, in effect, that Warren, Jones & Gratz are engaged in selling either directly to the trade or through their correspondents, cotton ties and also jute bagging. That, with the purpose and effect of discouraging stifling competition in the sale of such bagging, all the respondents, for more than a year, have refused to sell any of such ties unless the purchaser would buy from them a corresponding amount of bagging—six yards with as many ties.

The complaint contains no intimation that Warren, Jones & Gratz did not properly obtain their ties and bagging as merchants usually do; the amount controlled by them is not stated; nor is it alleged that they held a monopoly of either ties or bagging, or had ability, purpose or intent to acquire one. So far as appears, acting independently, they undertook to sell their lawfully acquired property in the ordinary course, without deception, misrepresentation or oppression, and at fair prices, to purchasers willing to take it upon terms openly announced.

Nothing is alleged which would justify the conclusion that the public suffered injury or that competitors had reasonable ground for complaint. All question of monopoly or combination being out of the way, a private merchant, acting with entire good faith, may properly refuse to sell except in conjunction, such closely associated articles as ties and bagging. If real competition is to continue, the right of the individual to exercise reasonable discretion in respect of his own business methods must be preserved.

This destroys another of the "unfair competition" bugaboos which the Federal Trade Commission has endeavored to set up, in finding evil and illegality where none existed before. The decision of course merely reiterates, in a somewhat different way, the principle which the Supreme Court recently laid down in the Colgate case, viz.: that a man cannot be interfered with in the choice of his own customers.

Since the above decision was handed down, the Federal Trade Commission has had to throw out some of its own cases. The Commission had brought a case against the C. D. Kenney Co., a Baltimore coffee house, charging it with unfair competition because it had refused to sell sugar to anybody who would not also buy coffee. During the sugar scarcity there were cases like this all over the country. When the case came up for hearing, the Supreme Court had just handed down its decision in the Gratz case, and the Commission consequently had to abandon its case against Kenney. I understand a large number of other cases, brought on the same ground, will be dismissed also.

---

## HELP YOUR CUSTOMERS SAVE TIRES

Skidding surprises the motorist, oftentimes, in its effect on his tires. Sometimes a tire will be noticed with the tread worn through to the fabric in one or more spots. The balance of the tire in such a case will be in good condition. Too sudden locking of the brakes, forcing the tire to drag, or taking corners at too high a speed are ordinarily responsible.

Skidding the tire for a short distance is often little thought of at the time. But the fact is that this slide has caused a flat place on the tread of the tire, which pounds away on the road, revolution after revolution, like a flat car wheel on a locomotive. When the tread has already been weakened by the grinding action of skidding, this incessant pounding causes the tire to go out of service prematurely.

A motorist will save dollars in tire expense if he will coast to a stop, employing his brakes very gradually. If he plans ahead, he may check the momentum on the car by closing the throttle with the clutch engaged. When starting from rest an easy foot on the pedal will save miles of tire service. If a car starts off with a jump, the effect on the tires is much the same as though the tread were rasped away with a heavy file.

# Enthusiasm That Diamond Tires Evoke

## JUDGE from the following letter from Mr. Lundblade, of Eureka, California:

"My real success began at the time I took on the Diamond line. In a few short weeks I was able to point to a line-up of cars and say with great satisfaction, 'Count the Diamonds.' And those who counted soon realized the growing popularity, and fell quickly into line.

"The reasons for the popularity were not hard to find. First, there was the inherent quality of the tires. The fact that they wore well—that they looked well—that they served the owner for a period usually far beyond the adjustment basis, with a minimum of trouble. Secondly, there was the character of the men behind the goods. The faith they had in the tires they were making. The willingness they evidenced to make good wherever and whenever a fault appeared.

"So my business has grown. Today Diamonds are to be found on more than half the cars in my community. I am making money, building up daily a larger and better business, because I am selling satisfaction—a satisfaction that is made out of quality and confidence.

"Three years ago my capital was very small. Today I am located in my own building which was just recently completed at a cost to me of $40,000."

## WAYS TO INCREASE YOUR WORTH

Arise in the morning early enough to take a cool sponge bath, to dress and groom yourself neatly, to eat a leisurely breakfast, and to reach your place of business on time, without rush or hurry.

Be so interested in your work that you will not be watching the clock for the lunch hour, or the closing bell.

Learn all you can about the goods you handle and take pride in displaying and arranging them to the best possible advantage.

Possibly other stores handle the same line of goods, and if you get good ideas, put them into practice if you can.

Prove yourself so reliable, so trustworthy, and so intelligent in the regular performance of your duties that you will gain the confidence of your superiors.

Acquaint yourself in reasonable measure with the position beyond, which you aspire to fill some day. Once we have become worthy understudies, we are in line for promotion when a vacancy occurs.

Remember that there are plenty of people to fill the small beginning-positions; a good many for those part way up; but there is always room at the top. Just the same the elevators aren't running, and you and I must climb up the ladder of success, hand over hand, and step by step. This means that if we are to merit promotion, we must observe, study, be willing to work, be business-like in our demeanor, be able to show real initiative.

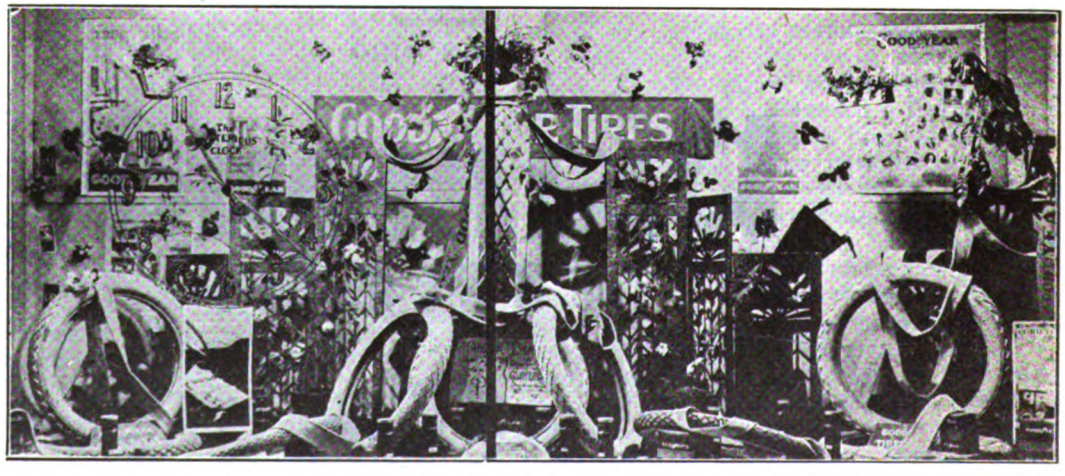
Only those achieve success who are willing to pay the price of getting ready. Do not envy the other person what he earned. Go ahead and earn as much as you feel you are entitled to yourself. Know what you want and fit yourself for it!

## ONE WRITING COMPLETES THE RECORD OF A CHARGE SALE

The National Cash Register Co. have a method of handling credit accounts so that after one first makes the original record at the time of the sale, no further recording, posting or bookkeeping is necessary until the money is paid on the account.

Every account is always kept up to the minute, ready for settlement.

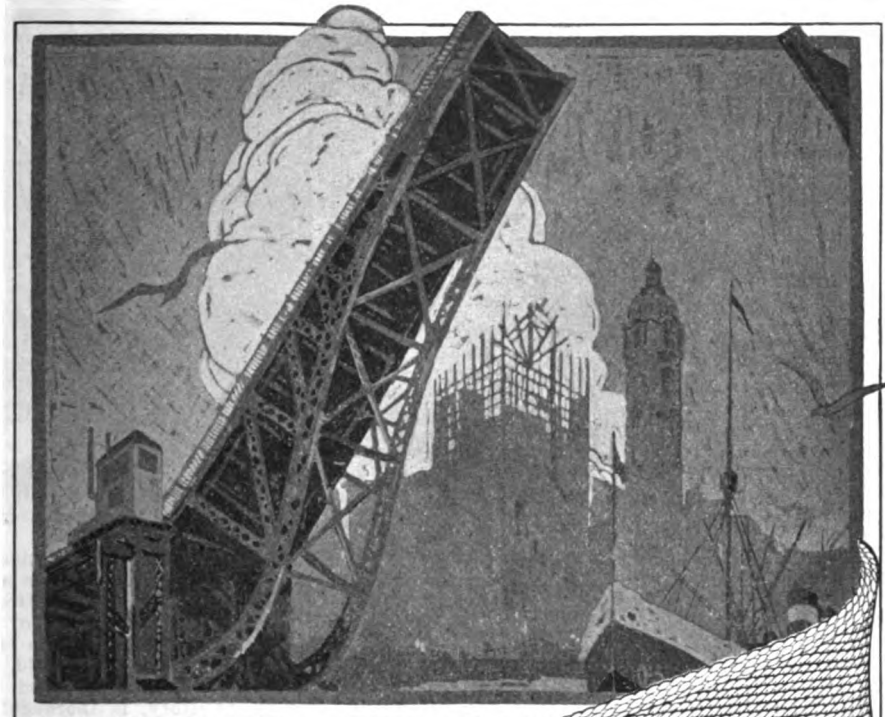
Merchants in many lines of business are using this up-to-date, National Cash Register Credit File. They say it is one of the safest, quickest, most economical credit systems they can use.



Any of our subscribers who would be interested in this system of the National Cash Register Co. should address department 27 of the National Cash Register Co., Dayton, Ohio, and they will be glad to give full particulars with reference to their method of handling credit accounts.

## LOCKWOOD EASTERN OFFICES EXPANDED

Removal of the eastern branch office and plant of the Lockwood Manufacturing Company, makers of the Lockwood line of Auto Fabric Accessories, from Brooklyn to Buffalo, N. Y., has been completed, according to an announcement of Paul Lockwood, managing director of the company. Harry B. Lockwood, vice president, will have charge of the Buffalo office and plant. An export sales branch in the Grand Central Palace, New York City, also has been established to meet the rapidly increasing foreign demands for the Lockwood line of Auto Fabric Accessories. Bert G. Close will be in charge of this export branch.



The western office and factory at Seventh and Wyandotte Streets, Kansas City, Mo., which is the parent plant of the Lockwood Company, remains at that location, and the Chicago sales branch with James G. Trumbly in charge, will continue at 3021-23 South Michigan Avenue.

The Lockwood Manufacturing Company recently bought and assumed complete charge of the Auto Fabric Accessories Division of the Baker & Lockwood Company, which line formerly bore the name "Baker." In the last few months there has been a tremendous expansion in the sales of the Lockwood line of fabric accessories known to jobbers and dealers in all parts of the country. The development of larger eastern facilities is in response to this business growth and will enable the Lockwood Company to expedite the handling of its trade in eastern and foreign territory.

This window is said to have made over $1500.00 in ten days. It was trimmed by A. J. Herboth of the Hoene Hardware Co., and surely the artistic and financial results are a tribute to Mr. Herboth and to John Hoene, his wise and far-sighted employer.

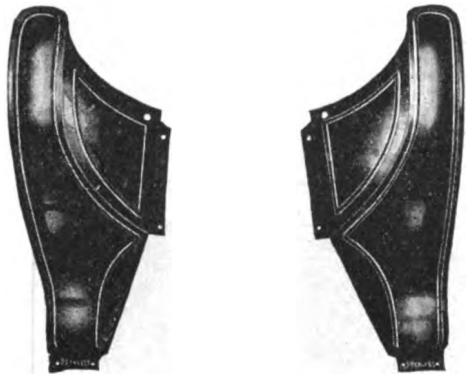
STRENGTH



Modern construction requires the use of steel to provide the stupendous strength essential to success and safety. Steel has no substitutes.

Like steel, Viking Brake Lining for Fords excels in strength. Its strength is inherent. Dealers, in selling it, know that their customers can ask nothing of Viking that Viking cannot give.

VOGT MANUFACTURING CORPORATION
ROCHESTER, N.Y.

## EXACT DUPLICATE OF FORD FENDER

The Corcoran Manufacturing Company, Cincinnati, manufacturers of the well-known "Peerless Products for Ford Cars," are now accepting orders for immediate shipment on an exact duplicate of the Ford fender.

Peerless Fenders are made to fit all models of Ford cars—but it is necessary to state the model for which fenders are intended. They add distinction and appear-

ance to the Ford car and are built according to the Peerless "Standard of Excellence." Carefully crated to withstand rough handling in shipment. One set of four fenders to the crate, six complete sets of fenders in four crates, etc. This manner of packing is especially convenient for both the jobber and dealer. Detailed description to be had by writing Department A.

## OTTERSON TELLS ONE ON HIMSELF

President John E. Otterson of the Winchester Repeating Arms Company is one of the most youthful looking of all the officials of that organization. He is a few years under 40.

Those who are acquainted with President Otterson will appreciate the humor of this incident, which he related to the Winchester dealers on the final day of the recent convention. He was going around the plant without a badge as he had occasion to do during the week and one of the dealers came up to him and said:

"Hello, young man, do you work here?"

"Yes, sir."

"How long have you worked here?" the dealer asked.

"Oh, about four or five years," said Mr. Otterson.

Then the dealer said: "What do you think of the place?"

Mr. Otterson said: "I think it is a pretty good place, but they work you pretty hard, and I hope it is leading somewhere," and the dealer said, "Well, you are young yet; don't mind that. What is your job around here?"

"I am president," replied Mr. Otterson.

There was prolonged laughter in the convention as the Winchester organization head finished the story.

Stadelman-Bonn Company, at the Dalles, Oregon, among the most wide-awake institutions of the Northwest, have recently been named Winchester agents.

## M. M. HARRIS WITH SANFORD BROS. AT SEATTLE

Another strong organization will be represented by a strong man in the Northwest from now on, since Sanford Bros. have established a Seattle office in charge of M. M. Harris.

Although Sanford Bros. is a national institution as manufacturers' agents, with offices at Chicago, Chattanooga, Cleveland and San Francisco, and cover the territory thoroughly, the addition of a Seattle office means both strength to them and a recognition of the importance of the Northwestern field.

M. M. Harris, who will represent Sanford Bros. in the Northwest territory, is thoroughly known to the trade in the West. He qualifies both through his popular personality and as an expert accessory man. In fact he is not new to the Northwest, for, many years ago, he traveled for one of the large hardware houses out of Seattle. Since that time, however, he has devoted practically all of his time to accessories.

For twenty years he has been brought up with the trade of the West. As manager of the Pioneer Mercantile Co. at Bakersfield, later with Chanslor & Lyon, at both Oakland and Fresno, and as manager of the accessory department for Baker, Hamilton, Pacific Co., his friends and admirers are as many as his past favors and good turns.

During the last year he has represented the Harris Oil Co. in the West, but the difficulty of making shipments to the western territory tended to nullify all the good work that Mr. Harris was responsible for in the western field.

His new work will bring him into connection with the trade in Oregon, Washington and Montana and Idaho, and we predict in advance that the relationship will be mutually pleasant and profitable.

Oliver Olson is the new secretary of the Juneau Hardware Co., Juneau, Alaska. Mr. Olson was formerly manager of the Jensen Hardware Co. at the same place.

Geo. H. Arland, for seventeen years manager of the Garfield Hardware & Mercantile Co., Garfield, Washington, is a candidate for the state legislature of Washington on the Republican ticket. The trade will certainly be interested in Mr. Arland's election, so he may combine his knowledge of hardware with good hard sense in taking up the hard task which the office presents, and the hard knocks which any political campaign implies.

# "You Can Trust That Spring"

THAT is the basis on which you can sell Harvey Springs. The car owner can trust them absolutely because they are built on such rigid standards that possibility of breakage in ordinary usage is simply out of the question.

Harvey Springs are specially designed for easy riding and great strength. They're boltless—no weak spots in them. And they're tempered exactly right, each leaf exactly the same by the patented Harvey process. Then, too, they are put to the supreme Harvey test for strength—a test under such great force that no ordinary spring could endure it. That's why we guarantee Harvey Springs against breakage or sagging. The margin of safety, the reserve strength, is so great that Harvey Springs live up to their guarantee even under emergencies.

Harvey Springs mean protection to the dealer—and more sales. Dealers are well supplied with sales helps, movie slides, window decalcomanias and inside wall posters as well as the helpful Harvey Spring Book.

There's a jobber near you who can supply you on short notice with any of the 1500 Harvey Springs. Write to us or to your jobber for new Harvey Book

## LOOK OUT FOR THE GASOLINE CLAUSE OF YOUR INSURANCE POLICY

(Copyright, by Elton J. Buckley.)

Minnesota.

I have a large retail store here, owning the building and carrying a large stock and fixtures. I have everything well covered by insurance, but have just noticed a clause in my policies against keeping gasoline on the premises. I operate two cars, keeping them in a place in the basement of my building, and I have just learned that it was the custom of the man in charge to keep cans of gasoline around the place. We have had no fire, but the policy says it shall be void if gasoline is kept on the premises and I am anxious that the insurance be held O. K. Please advise me what I should do now. E. R. K. & BROS.

No clause in a fire insurance policy is more rigidly enforced than the gasoline clause, and I advise this correspondent, as well as anybody else in the same boat, to go straight to his insurance company, tell them what has occurred, and ask them to note on the policy, or in a letter, that they are aware that gasoline was kept on the premises prior to a certain date and waive their right to void the policy for it. Doing this now, before a fire, will restore your insurance —which undoubtedly the company will declare void if he finds it out—and give you a new start. If you let it go and a fire occurs, you will certainly lose your insurance if the company discovers it, for the courts are clear that where the gasoline clause has been violated the insurance is void, even though a subsequent fire was not in the least due to the violation.

Only a few days ago a case was decided in Kansas which goes rather further to enforce the gasoline clause than any case I have previously seen. A business man who carried insurance on his entire establishment, had a fire. The insurance company refused to pay on the ground that he had violated the clause regarding the keeping of gasoline on the premises, and at the trial it developed that all he had done was to keep a Ford car on his place over night and part of the day for two or three months, with some gas in its tank. The tank held ten gallons of gas and when it stood on the premises it ranged from one-third full to full. But no fire resulted from this, and on the night of the fire the car was not even in the place.

The court ruled that in spite of all that the policy had been violated and the insurance was lost. I will say that the gasoline clause in this case provided that the policy should be void—

If the insured then had or there should be kept or allowed upon the premises, gasoline or petroleum, or any other products of greater inflammability than kerosene oil.

I reproduce the following in order to show the way the courts reason in these cases:—

The condition which was violated did not in any way depend upon the fact that it increased the risk, but by the express terms of the contract was made to void the policy if the condition was not observed.

Course and text writers differ as to what constitutes a breach of such a provision as we are considering. But we believe and hold that the amount of gasoline kept in the car in the barn for two or three months was a breach thereof and not a permissible or negligible violation thereof.

The parties, fully competent, fairly contracted that:—

This entire policy, unless otherwise provided by agreement endorsed hereon or added hereto, shall be void if the insured now has or * * * if (any usage or custom of the trade or manufacturer to the contrary notwithstanding) there be kept, used or allowed upon the described premises * * * gasoline * * * or petroleum or any of its products of greater inflammability than kerosene oil.

Thus the contract was not to insure a property in which a car with a tank of gasoline should be kept or stored, but one free from such inflammable stuff. The plaintiff should have kept his contract or had endorsed thereon consent to keep his car in the building.

There are many cases on the gasoline clause of fire insurance policies. For the unthinking business man it is a good deal of a trap, as gasoline is used in such a commonplace way today for motive power and so many other things. The best safeguard is to tell your agent, when you take out insurance, just how gasoline is kept on your premises, and to get him to have the company endorse its consent on the policy. Then if any change whatever occurs in your practice with regard to gasoline, get the company's consent to that also. A flat violation of the gasoline clause always voids the insurance.

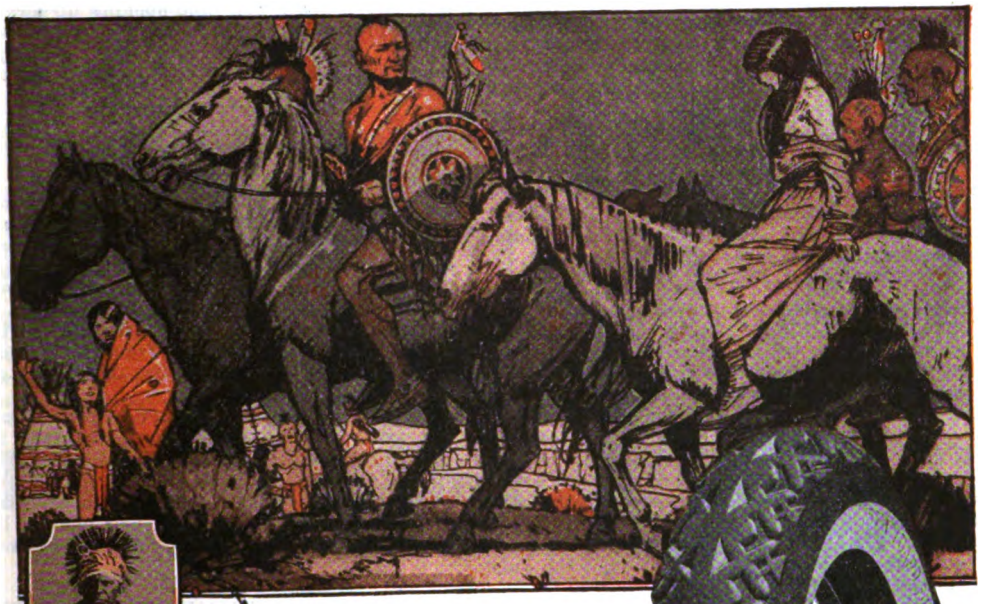
---

## THE FLOURISH OF FOOLISH PRIDE

"I've noticed," said Abe Wilkins once,
"that men are often proud.
They like to make a flourish when
They're minglin' with the crowd.
And many a young man blows the coin
He can't afford to spend,
Because he has the notion he
Must always hold his end.

"I like a man to do his share
In everything that goes,
An' I despise a mean man's tricks,
As everybody knows.
But I have seen a lot of woes
An' misery depend
Entirely on this foolish plan
Of holdin' up an end.

---



## WHAT MOST CLERKS THINK

A young hardware clerk at Seattle consulted a physician about "tobacco heart," which he thought he had contracted by excessive smoking.

"Doctor," said he, "do you believe that the use of tobacco tends to shorten a man's days?"

"Do I?" exclaimed the doctor, "I know it does. I tried to stop once, and the days were 90 hours long."

## SLAYMAKER TIRE CARRIER LOCKS

The Slaymaker Lock Co., Lancaster, Pa., have just placed on the market their new lock No. 1098 for automobile tire carriers. The shackle can be made adjustable to all tires and fits the tire carrier bracket securely, clamping the extra tire to the car, and assuring a perfect fit of the lock on the tire carrier in every case.

It is said to be the only lock that will completely protect tires on the new tire carrier on the Buick, Overland, Oakland and Chevrolet cars.

The new lock, together with all other Slaymaker products, is sold to the western trade by A. C. Riddell, with headquarters in Los Angeles, and Earl Jones, with headquarters at 3003 Grove Street, Berkeley.

## STERLING TIRES PAY DIVIDENDS

At a recent meeting of the board of directors of the Sterling Tire Corporation, the following dividends were declared on Sterling Tire stock:

Regular quarterly dividends of 1¾ per cent on the outstanding 7 per cent preferred stock of the corporation, paid July 20, 1920, to stock holders of record July 6, 1920. Regular quarterly dividends of 2 per cent on the outstanding series B preferred stock of the corporation, paid July 20, 1920, to stockholders of record July 6th, 1920. Dividends of 1 per cent on the outstanding common stock of the corporation, paid July 20, to stockholders of record July 6, 1920.

The Sterling Tire Corporation reports that it is running to capacity production and is considerably behind on unfilled orders.

## NEW STANDARD FOUR DISTRIBUTORS

Under its new and more extensive sales policy, announced some time ago, the Standard Four Tire Co., of Keokuk, Iowa, is rapidly establishing new distribution points throughout the country.

Following close on the announcement of several new connections in the southern territory, comes the news of five important distribution appointments in the East, as follows: The McGraw Tire Sales Co., Buffalo, N. Y.; Wagner-Tracy Auto Supply Co., Inc., Albany, N. Y.; Hauck Brothers, Mechanicsburg, Pa.; Dawson Tire & Supply Co., Newark, N. J.; Combination Ladder Co., Providence, R. I.

According to F. R. Eyer, General Sales Manager, the company will continue opening up new territory in direct proportion to their increased production facilities. The Standard Four Tire Co. is now, he says, producing more tires per day than ever before it its history.

## AUTOMATIC SPRING SHUTTER RADIATOR COVER

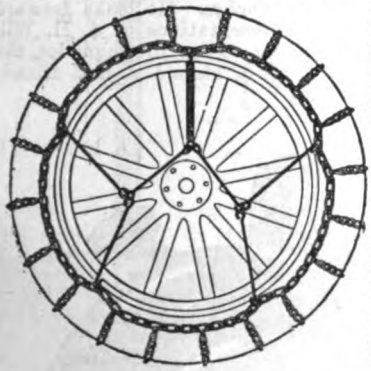
The Nathan Novelty Mfg. Co., New York, has placed on the market what should prove a most popular automobile accessory, in their Nathan Spring Shutter Radiator Cover. With such a shutter on the car the driver is able to regulate the temperature of his motor right from the driver's seat. This cover operates on the principle of an ordinary window curtain, with a spring roller which pulls up from the bottom by means of a cord which is connected under the cowl with a control on the dash.

It affords complete protection to radiators in freezing weather. The covers are guaranteed for material and workmanship, and are made adaptable to any car, or any radiator.

Other products of the Nathan Novelty Mfg. Co. are their seat covers, as well as their general line of automobile and motorcycle fabric and leather supplies.

## ATTRACTIVE WINDOW OF GAUL, DERR AND SHEARER CO.

A recent attraction along "Automobile Row" in Philaelphia was a display of Dixon's Graphite Automobile Lubricants in one of the large show windows of the Gaul, Derr and Shearer Co., 215-17 North Broad street.



The occasion afforded an opportunity for many to become favorably acquainted in a broader way with the supreme lubricating value of the Dixon line.

Gaul, Derr and Shearer Company about January 1, 1919, informed the trade of their intentions to adhere to a jobbing policy exclusively, which they report has proved very satisfactory from every standpoint. For many years they have shown their confidence in the Dixon Lubricants by increased sales.

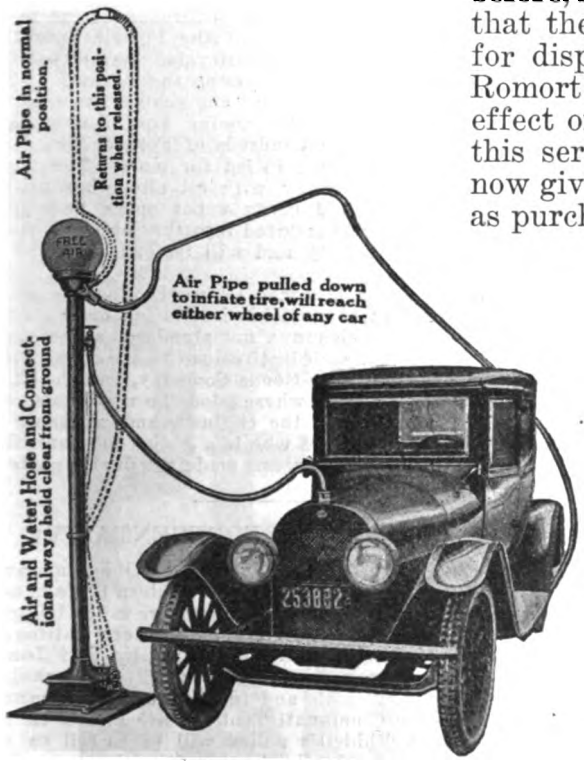
# THE ROMORT AIR & WATER STATION



## Twice the service in half the time

*Does It Pay?*

**Here is the answer in the exact words of a dealer who recently installed a Romort Air and Water Station**

Your Romort Air and Water Station is a wonder; it has already increased my business to quite some extent.

I find that a great many automobile owners who have never done business with me before, stop for air and water. I am positive that the clean, quick and efficient method for dispensing air and water through the Romort Air and Water Station is having an effect on automobile owners who are using this service, for a lot of these owners are now giving me their repair business, as well as purchasing their accessories at my store.

If I could not purchase another Romort Air and Water Station, I would not dispense with the one I now have for twice its price.

I am a strong believer in advertising that produces results and it is the best and cheapest advertising that I could buy.

Why not put a Romort Air and Water Station to work for you too? It means the making of new customers, more business and fatter profits. A postal will bring full details.

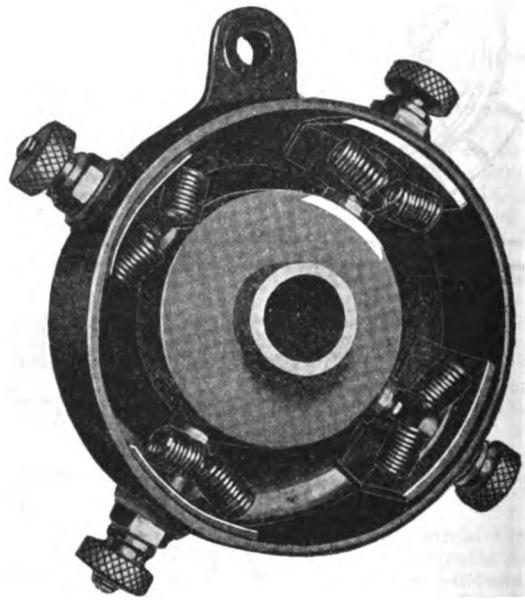
## SELLING DRILLS TO BIG BUYERS

Some sales representatives are proud of the number of their customers, and find that the most important factor in getting business is the cut of their clothes and the length of their hospitality. Of course, the nature of the goods has something to do with the kind of representation they demand, but it gave us genuine pleasure recently to become a little better acquainted and learn some of the sales methods and consumer co-operation of C. H. Klieves, who represents the Whitman & Barnes Manufacturing Company in the West.

Mr. Klieves is a genuine and thorough hardware man, with 15 years in the western field behind him, and with almost countless friends who hail him throughout the territory.

He recalls with pride the day when he was the first man on the road for the Whiton Hardware Company of Seattle. Since that time he has profited by interesting and varied experiences in all branches of the trade. For three years he was in the mechanical and technical service of the Holt Mfg. Company at Stockton, California. Later and for some time he was the popular and successful proprietor of the Stockton Hardware Company. For the last six years, however, he has represented Whitman & Barnes Mfg. Company in the West, on their drills, reamers and drop-forged wrenches.



Mr. Klieves is one of those salesmen who believe in showing the merchant and buyer just what his goods will do. Sometimes he spends a week or two in one large factory or shipyard becoming intimately acquainted with the special problems, demonstrating the work of W. & B. tools and teaching the workmen and mechanics the best use of reamers and drills.

Often, too, he spends a week or two at a time with the different jobbers' salesmen in developing new accounts and making old customers more satisfied. His pleasant personality, his full knowledge of his goods, his way of inspiring confidence in himself, his tools, and his principles—all these sterling qualities work together to make C. H. Klieves a man who is gladly greeted and regretfully bid farewell wherever his travels take him.

With the amalgamation of the Chicago and St. Catherines plants of Whitman & Barnes with the J. H. Williams Co., Mr. Klieves' efforts will in the future be directly concerned with the interests of Whitman & Barnes drills and reamers, manufactured at the Akron, Ohio, plant.

The rearrangement is a welcome one to Mr. Klieves, and will allow him to do more ample justice to his "Twin Trumps." Then, too, it has really been more than one man can do to handle such varied lines as twist drills, reamers and wrenches. He looks forward to cooperating with the representatives of J. H. Williams & Co., and he can never escape the inquiries, the attentions and the references of his old wrench friends throughout the territory.

---

## J. M. JACKSON INTRODUCING AUTO TIMER

J. M. Jackson, well known manufacturers' representative in the West, whose good face and good faith are known to hundreds of buyers throughout the territory, is one of the officers of the Pacific Specialty Company of San Francisco, California, who are putting the Pacific Timer for Ford cars on the market.

The new timer is sturdily, yet simply constructed, and solves the problem for timing Ford cars as evidenced by letters from hundreds of Ford drivers, who have tried them out and called for more. The timer saves gasoline, does away with oil altogether in the timing mechanism and gives a hot spark and more power. It is being introduced into the jobbers' stocks throughout the territory and will be handled entirely through jobbers.

Those of our readers who know Mr. Jackson know that he would not connect his institution or his name with any article which was not standard, and worthy of connection with, such institutions as the Atlas Tack Company, the Ohio Wire Goods Company, and the other standard manufacturers whose goods he represents.

L. T. Tuttle, who is the engineer and mechanic in charge of production and who is a genius in connection with mechanical problems, has made the device perfect.

---

## NEW WESTERN REPRESENTATIVE

The Cincinnati Tool Co., Cincinnati, Ohio, announce they will be represented before the western trade henceforth by A. C. Riddell, with headquarters in the Higgins Bldg., Los Angeles. The sales in northern California and in the Northwest will be handled by Earl Jones, whose headquarters are at 3003 Grove Street, Berkeley.

The mechanics' tools and full line of clamps manufactured by the Cincinnati Tool Co. are known to the trade, and Mr. Riddell's policy will be to sell to the jobbers only, as is the fixed rule with other manufacturers he represents.

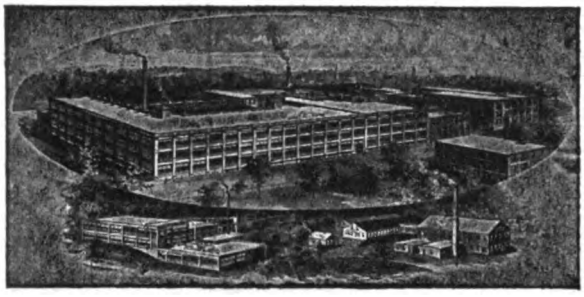
## HEATER FOR MOTOR AND PASSENGER



The Chicago Flexible Shaft Company, 5600 Roosevelt Road, Chicago, Ill., is featuring a double use for the Clark Indestructible Steel Heater, which gives the dealer a larger selling field.

This heater burns the Clark Carbon Brick, its efficient heat lasting 12 to 14 hours, with no flame, smoke or odor. Quick and easy to operate, it is ready for use in five minutes and keeps passengers comfortable in open or closed cars.

In addition to passenger comfort, the same heater can be placed under the hood on the opposite side from carburetor to keep the engine warm when the car is standing in the garage or in the street. This does away with starting troubles common in cold weather. A robe thrown over the hood increases the efficiency of heater.

The ordinary use of the heater suggested in the first illustration, together with its service in minimizing cold weather starting troubles, means a wider distributon.

## GOODELL-PRATT TOOL BOOK No. 14

Publishing a 464 page catalog on the best book paper, with red and black ink on each page, is no small proposition these days We can most heartly congratulate Goodell-Pratt Co. for their new tool Book No. 14. We know something of the difficulties to be encountered by publishers in any line, and when publishing difficulties are combined with stock, production and price uncertainties, the publishing of a manufacturer's catalog is a difficult matter indeed.

The new Goodell-Pratt tool book No. 14 supersedes their No. 13 catalog published three years ago, and brings the stock right up to date. Although the prices given in catalog No. 14 were correct on January 1, 1920, a new list price pamphlet is distributed with the catalog as of July 1, 1920. It is the understanding of Goodell-Pratt Co. with the trade that its prices are subject to change without notice.

In front of the admirably compiled book is a three page index, which provides a ready access to any tool, for the various tools are arranged in alphabetical order. There is also a list of new tools included in the catalog, and it is an impressively long list. Many new tools have been added to the Goodell-Pratt line, especially tools that are necessary for auto accessory and machine shop hands.

Any Goodell-Pratt dealer who has not received the new catalog should surely provide himself with it at once, and bring his tool dictionary up to date.

## JAMES SWAN MECHANICS' TOOLS

The James Swan Co., Seymour, Conn., has just placed in the hands of the trade a new illustrated catalog and price list. The catalog is elaborately published and will be a most attractive addition to the trade library of any merchant. It embraces 100 pages, each page tinted with a decorated border, bearing the company's name.

Very naturally the majority of pages in the catalog are devoted to augers, bits, chisels, draw knives, gimlets and gauges. These are the principal tools manufactured by the company. Reproductions of scenes from the factory are scattered throughout the book so the dealer may get some idea of the origin of the tools that are described.

## CAUSE AND PREVENTION OF RIM CUTS

Motorists are often puzzled at the reason for their tires rim cutting. Especially are they surprised at this when the rims are in good condition. Ordinarily underinflation is held solely to blame. But there is an important contributing cause—side sway.

Sudden turning of the car throws an abnormal strain on the side walls of the tires. Occasionally this side sway is sufficient to rupture the fabric. In the majority of cases the trouble is noticed close to the bead or edge of the tire where the fabric strands are anchored. If the injury is neglected, chafing begins. Then strand after strand is weakened. The result is a blow out.

It is a simple matter to prevent this condition. All that is required is a tire gauge, that proper pressure may be maintained, and a little care against suddenly swerving around corners. Even aft r trouble has begun, prompt action in taking the injured casing to a tire surgeon for repair will greatly prolong its life.

## LAMSON WIRE LINE CARRIERS

The Lamson Co., Boston, Mass., specializes on the manufacture of wire line carriers for conveying goods and change from the counter to the wrapping department or cashier's desk in a retail store.

Many a hardware merchant has found it an advantage and economy to keep his salesman right at the counter, his cashier right at the cash drawer, and his wrapper right at the wrapping desk, by using such a system of carriers. They will be interested in the new catalog whicn illustrates all Lamson devices, both in detail and as installed in typical retail stores.

Although the present catalog is confined to wire line carriers, the Lamson Co. also makes Pneumatic Tube Systems, Electric Cable Systems, Belt Conveyors for Parcels and Parcel Delivery Bins.

# Strong Links of the American Chain

**General Sales Director Walter M. Taussig Comes Into Contact With All Phases of All Industries, Supplying the World With Chains.**

FROM the day that Prometheus was bound to the rock in the mountains of Thessaly, man and his world have been intimately concerned with the "ties that bind." Of course, there are many sorts of binding, just as there are many ties, but none is more important in the modern world than the steel chain, and perhaps no manufacturer of the United States is so extensive in products, so wide-reaching in diversity of products as the American Chain Co.

W. M. TAUSSIG
General Sales Director

A. P. VAN SCHAICK
Assistant General Sales Manager

E. O. JOHNSTONE
Western District Manager

Chains are put to a diversity of uses on the sea. They are vital in the factory for all industry. Down in the depths of the earth at the mines chains are most vital. They go in the forest with the woodsman; in the city with the drayman; they are always with the farmer; indispensable for the house-builder, and for the railroad man. For hundreds of others the chain is most important in their work and in their operations.

By no means least important of the chain's applications is the weed skid chain. Although this is one of the more recent adaptions of the chain, it is now one of the most important factors in the business of the American Chain Co.

No wonder General Sales Director Walter M. Taussig is a most vital, most wide awake, most interested and interesting personality. Owing to the position of his company and the men of various affairs that he must be constantly brought in touch with, his understanding, his knowledge and his sympathy with American industry is as broadening as it is broad, and the vigor and strength of his personality is altogether typical of the chains which are sold in vast quantities throughout the world under his direction.

Within the last month or two Mr. Taussig made the rounds of the United States, visiting the district sales offices of the company and the trade in general. Mr. Taussig likes to think of the eighty odd members of the sales organization as his boys, and they are very truly proud to be considered as such.

He is in every sense a father to this big, enthusiastic family of his, and in his hearty, quick "Rooseveltian" way he goes about and gathers information while he is giving out inspiration and new life.

### Veteran in the Hardware Field

Mr. Taussig is a veteran in the hardware field, and is intimately acquainted with the jobbing trade. He was for many years actively associated with Wiebusch & Hilger of New York, latterly as its president. In 1914 he assumed direction of sales of the American Chain Co., with whose president, Walter B. Lashar, he had relations for years.

Since 1914 the organization has expanded tremendously. In 1916 the business and plants of the Standard Chain Co. were purchased. In 1919 the plants and business of the Highland Iron & Steel Co., the Page Steel & Wire Co., were also purchased and absorbed into the organization. The company has also recently constructed a large and modern malleable casting plant.

"Our constant aim," says Mr. Taussig, "is not only so to develop our manufacturing and distributing functions as to make it possible for the jobbing trade to serve the dealer and consumer quickly and efficiently, but also develop new uses for chain.

### Fascinating Diversity of Uses

"Our investigators are constantly at work in this direction, and considering the fact that we manufacture every type of chain from the smallest plumber's safety to the largest ship's anchor, the fields of industry which we touch are exceedingly varied. Chain is used for every conceivable purpose, and watching and fostering further uses is the most fascinating thing I know of."

Mr. Taussig's family was with him on his western trip, for in between his business calls and the affairs of the company that he was constantly attending to along the way, he squeezed in a few hours of hard earned vacation and recreation here and there; a game of golf, a day or two in the Grand Canyon of Arizona,

## You're Interested Most in How They Sell—

## "HEXALL" Socket Wrenches

*Trademark Reg. U. S. Pat. Off.*

FROM the moment a "HEXALL" passes the lynx eyes of our factory inspectors as "standard"—all along the line —from shipper to jobber, to dealer, to ultimate consumer, it is accepted at its face value without question. WHY?

Because they know, from experience, that the makers themselves know that "HEXALL" Socket Wrenches are mechanically-perfect, durable, dependable, built to withstand everyday usage. That, to bind their promise of performance, they guarantee every "HEXALL":—

***"Break Any Sedgley Wrench and We Repair It —No Charge"***

There you have the story—why "HEXALL" is such a tremendous seller; why sales are growing by leaps and bounds. There are seven sets—a "HEXALL" for every need.

**Write for prices and discounts. Dealers reach your jobbers; jobbers reach us.**

"BABY"—as it appears in proportion to the size of the hand.

## R. F. SEDGLEY, Inc. *Est. 1897*

2311-13-15 North 16th St., Philadelphia, Pa.

**NOTE:** Can you imagine anyone passing by an attractive counter, case or window display of the "BABY" without wanting one? Think it over!

Digitized by Google

in the Yosemite Valley, and among the scenic beauties of the Northwest.

Very naturally Mr. Taussig is a golfer. Any man who knows as much about "links" as he does is, of course, right at home on the golf links. On his western trip he spent a vigorous hour on the green at play, and hard play, for he plays just as hard as he works, and we know he enjoys it as much, yet no more.

All the while he was under the careful and pleasant guidance of E. O. Johnstone, district sales manager for the company in the West.

**E. O. Johnstone, Western Manager**

While Mr. Johnstone gives every evidence of being a young man, yet nevertheless for over thirteen years he has studied and guided the distribution of chain among western buyers. For many years with the Hughson & Merton organization in the West; he handled the chain business in representing the Weed Chain Co. When, in 1915, the American Chain Co. opened their district office in the territory, Mr. Johnstone very naturally took charge of the West for them on all lines of chains.

Working with Mr. Johnstone and representing the company before the buyers, are three strong lieutenants. A. H. Atkinson, in the Northwest, was a former railroad man, but, of course, that is a natural entry into the chain business. In California and Nevada, C. W. Moody, with headquarters at San Francisco, handles the company's business. In the mountain territory and in the Southwest, W. K. Reese is known to the buyers and is an enthusiastic member of the American Chain Company's organization.

---

Much time is lost in life through failure to make close connections. If you can save time by getting more accurate directions before you start, it will be time well spent.

It wears nerves and wastes valuable minutes and hours to miss connections—to look for the thing that isn't there or to start for the place which is not really the point you ought to go.

Stop shooting off on a tangent. Get your bearings and aim for the Bull's Eye.

---

We all have to learn to do things that we really do not care to do and do them when they ought to be done. This develops strength of character and gives us the inner satisfaction of being able to surmount difficulties.

---

Every action of yours calls forth a corresponding reaction on the part of the customer with whom you deal. Unfavorable reactions drive customers away. Favorable reactions win them. Govern yourself accordingly.

---

Remember, that the public is better posted on your business and all its ramifications today than ever before. The war is the reason. This should mean something to you in shaping your advertising to win business.

---

H. L. Richards and Dick Richards are the new proprietors of the former hardware business of H. V. Davies at Chewelah, Washington. Both Messrs. Richards are well known men in the district.

---

The Rennie-Keyser Company is a new firm at Bellaire, Ohio. The incorporators are J. C. Rennie, M. C. Rennie, H. B. Keyser and C. W. Miller. The capital stock is $75,000.

## AUTOMOBILES

(By H. M. Sutherland, in Judge)

Automobiles are luxurious necessities with a honk at one end and a smell at the other. They are run by anything from kerosene to a North Carolina darkey, and through anything from grandmother's legacy to the gates of the great beyond. There are two kinds: self-starters and self-stoppers, the latter being the most common. Some owners with the flivver variety carry a blanket around with them to hide what they have.

Automobiles are of all colors and shapes, and have more ailments than a maiden aunt, and you can't tell whether it is gall stones in the carburetor, adenoids in the exhaust, or influenza in the differential, without an x-ray series, three mechanics and a check for the remainder of the savings account. They cost anywhere from $500 to sixty days and divorce proceedings, but a man living on a fashionable street without a motor has no more show than a Cuban hairless pup on a Polar expedition.

The auto has a peculiar habit of stopping on the railroad crossing long enough for the through freight to knock the driver's false teenth into New Mexico, and extradition papers must be served in four states before enough of the remains can be gathered for the funeral. A twin-six will make the love-lyrics of the soulful Romeo who has no car sound to her like a tongue-tied monkey cussing its mother-in-law, and she is yours, A1, if you will paint it red. Speeding over the moonlit winding road, the cold night wind blowing her curls across your face, the silvery catchy voice, the glowing shell-pink cheeks—"Oh, Albert, you hold on to the steering wheel."

---

Cynics notwithstanding, there is more fun in "doing unto others" than in doing others.

---

Carve the right kind of place in men's hearts and then you can safely leave to them the carving of the right kind of epitaph on your tombstone.

---

## BASEBALL IN THE BIBLE

"The devil was the first coacher. He coached Eve when she stole first. Adam stole second.

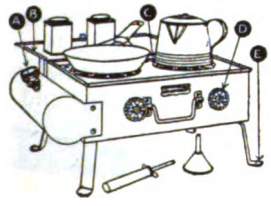
"When Isaac met Rebecca at the well she was walking with a pitcher.

"Samson was struck out when he beat the Philistines.

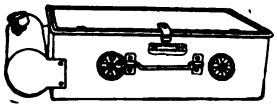
"Moses made his first run when he saw the Egyptians.

"Cain made a base hit when he killed Abel.

"Abraham made a sacrifice.



"David was a long-distance thrower.



"Moses shut out the Egyptians at the Red Sea."

## PASSING OF W. T. BELDING

In the passing of W. T. Belding of the New York office staff of the HARDWARE WORLD, September 9, the trade lost an earnest worker and a sincere friend, whose interest was ever that of the pains-taking and conscientious business man, whose effort had been directed toward building and bettering the lot of merchants and manufacturers throughout the United States.

The HARDWARE WORLD mourns the loss of a staunch friend and co-worker. He was associated with his brother, Ervin H. Belding, and had a wide acquaintance with manufacturers throughout the New England States. Working modestly and without ostentation, Mr. Belding was one of those who kept the "house in order," whose watchful eyes and careful attention to detail made the work of all his associates smoother and pleasanter.

He was faithful, pains-taking, conscientious, honest and earnest to a great degree in business affairs. His hand was ever present. Yet he reaped little of the glory. His was the service behind the lines. His reward was the satisfaction of good work well done.

Some months ago his health failed him and it was necessary for him to remain at his home in New Jersey. Mr. Belding was 62 years old and has been connected with the HARDWARE WORLD, New York staff, for the last five years.

He is survived by his good wife and two sons, who have grown up into manhood under his guidance so that they may carry on the good name that their father has borne so worthily. They have the sincere sympathy of everyone who knew or were in any way brought into contact with him.

## THE SECRET OF GENIUS

Most men bind themselves down by self-created limitations. Because a thing is hard to do, they fear to try it. Because a thing has never before been done, it is impossible. In every human being there are possibilities which the human mind does not dream of. Every so often someone casts fear from his thoughts—accomplishes the impossible—and is hailed as a genius.

## VARNEY BROTHERS SUFFER FIRE

The Holtville store of Varney Brothers in the Imperial Valley, California, was destroyed by fire recently, with an estimated loss of $150,000. It seemed for a while that the entire business district of the town was doomed, but the fire was extinguished with the loss of only the Varney store.

The Wiggins Company, successors to Archer & Wiggins Company, are located in a fine new building at Park and Couch Streets, Portland, Oregon. It occupies an entire square block. The Wiggins Company is one of the largest accessory jobbers in the Northwest.

## "IF WE COULD KNOW"

They were so young, and Life so new,
So brave and boundless was the view.
They loved this earth, and loved it well;
Came war. The blow dividing fell.
They are not of us any more,
There is between us the Closed Door.

You say not so. You find them near;
They are not in some distant sphere;
They do not dream their time away—
A thousand years gone as a day.
But they resume their best delight—
Some task whose end they keep in sight.

Then, no Closed Door? No Heaven strange?
But just this Earth . . though with a change;
A vantage-ground, in some Fourth Space—
And old Earth wears a lovelier face;
And all inharmonies of sound
Tuned into music reach that ground!

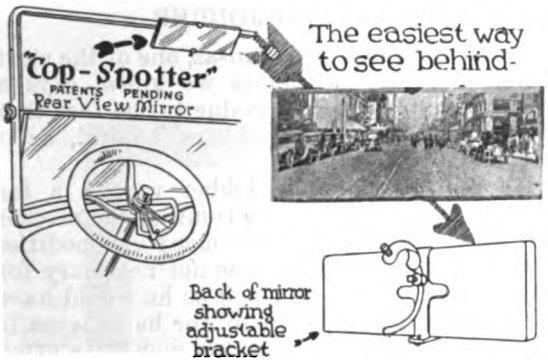
Not far? Not further than a Thought,
That oft great distance has made naught
To souls yet dwelling in this flesh;
And, lo! when broken is the mesh,
And the Ethereal Thing rides free,
How swifter shall the courier be!

They were so young, and so unworn,
That it must still with them be Morn,
So blithe and eager are they yet;
Nor the Old Home would they forget!
You say, that it is even so;
O Seer, if we could only know!

—Edith M. Thomas in the New York Tribune.

## TABER EVERLASTING BEARING SCRAPER

Of interest to the automobile mechanic is the new Taber Everlasting Bearing Scraper, which is now ready for distribution by the accessory and hardware jobbers.



The feature of this new scraper is the high speed steel blade, which is fastened securely to a tough bronze back, the whole being nicely nickel plated and mounted in a polished birch handle.

Particular care is taken in the tempering and grinding of the blade, which is made from Halcomb Steel Co.'s "Dreadnought" high speed steel. The claim is made that this blade will hold an edge longer than any other scraper made. The scraper is well shaped, hollow ground, and does not chatter. The retail price is $1.75 each.

The Taber Bearing Scraper is manufactured by the Taber Manufacturing Co., at 2227 Woolsey Street, Berkeley, California. Sales in the western territory are handled through the Taber-Bigelow Co., at San Francisco. The manufacturers announce that the territory east of Denver is still open on this attractive article.

Kipp & Bentzen have purchased the hardware business of R. N. Stevenson at Willamina, Oregon, and are planning to increase the stock and extend the business.

## USE YOUR JOBBER

Hamp Williams of Arkansas, one of the most successful retail merchants we know, says a great deal of his success is due to the fact that he did business on his jobbers' capital, as it were.

He realizes that the jobber was in a far better position to know the trend of the market and the situation on a great many commodities than he was, and that it was not necessary for him to carry as large a stock as he would have otherwise been compelled to, for he believes in buying frequently, turning his money as often as possible. Thus he was not required to use as much capital as he otherwise would.

Where merchants are far removed from factories, it is particularly desirable to take advantage of their jobbers' facilities, and keep in touch with them, getting the benefit of their suggestions and advice. These are times when their suggestions are especially worth considering.

## A COLLECTION SUGGESTION

A western merchant prints the following "pome" on the back of all his sales slips:

**To Our Customers**

You need your money
And I need mine,
If we both get ours
It will sure be fine,
But if you get yours
And hold mine, too,
What in the world
Am I going to do?
Think it over.

If the Pennsylvania Railroad has the same experience as certain other large employers, its laying off of 12,000 will not result in a reduction of the total amount of work done. Labor, like a garden, sometimes produces more after a thorough weeding.

The new building of the Donohoo-Ware Hardware Co., Plainsview, Texas, will have the first floor devoted to a complete hardware stock with furniture on the second floor.

Indicative of the general trend of the hardware business in Texas is the fact that the Dabney Hardware & Furniture Store at De Leon, Texas, has increased its stock from $15,000 to $35,000.

The Citizens Hardware & Furniture Co. has been organized at Oralo, Texas. The incorporators are J. H. Kelling, J. B. Harrison and Alfred White, with an initial capital stock of $17,000.

That the Turner Hardware Co., Modesto, California, has been most successful in the automobile business is evidenced by the complete repair department maintained for Buick and Chevrolet cars. The company has the agency for these two automobiles in its territory, besides the conduct of an auto accessory, hardware and implement business.

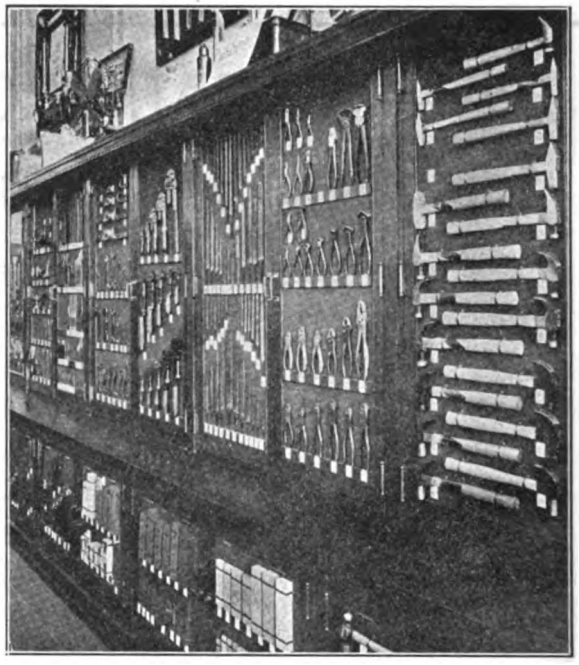
## CULTIVATE THE SALESMEN

The acquaintance of the majority of traveling salesmen should be cultivated by retail merchants. The real salesman can render valuable assistance to almost any merchant. He is making a number of towns and calling on many merchants. His eye is trained to pick out strong or weak points at a glance. Many times he could make valuable suggestions to any storekeeper, but is reticent about giving advice for fear of offending. Why not ask him for suggestions?

## TRAINING CUSTOMERS FROM CHILDHOOD



In a Kansas town of 25,000 people there is a general merchant who does enough business for a city of 75,000. This is his business building plan: He "catches 'em while they are young." Whenever there is a birth in that town he sends a message of congratulation to the father and mother together with a suitable but inexpensive gift for the youngster. At every recurring birthday he refers to his card index and sends something to the child.

The parent who does not appreciate such attentions from a merchant is rare, even if he knows the purpose back of them. As for the children, they come to consider the store from which the presents come as their store. It is the testimony of this Kansas merchant that he has prospered in great style. He does a lot of newspaper advertising and he says newspaper advertising is of great worth, but its value is enhanced if followed by something such as he has introduced.

## NEW ABSORENE SALES MANAGER

The Absorene Mfg. Co., St. Louis, Mo., announces that Frank J. Stien of Davenport, Iowa, formerly paint manager for the Pittsburgh Plate Glass Co., Davenport and Des Moines, has joined the Absorene Co., and will be sales manager.

Mr. Stien's acquaintance with the paint trade is thorough and his friends predict that he will be a strong factor in distributing Absorene wall paper cleaner, HRH paint cleaner and Savolene paint and varnish remover throughout the United States.

Here is a sample display of tools prepared by the Winchester Co., as suggestive of what should be found in a model hardware store. The attractive appearance of this display will appeal to your customers wherever you are located.

## NATIONAL ASSOCIATION CONVENTION

The twenty-sixth annual convention of the National Hardware Association of the United States will be held at Atlantic, N. J., on October 19 to October 22, inclusive. The sessions will be held at the Marlborough-Blenheim Hotel, with a schedule of meetings similar to those of previous years. The Automobile Accessories Branch will meet on Tuesday, October 19, and on Thursday, October 21.

Scavezze Bros. is one of the enterprising new firms in Kansas, with main headquarters at Arma and a branch at Frontenac. Both of their stores carry a full line of hardware, household goods and farm implements.

Edward Hockaday & Co. have purchased the stock of the Charlton store at Blackwell, Oklahoma, and have added a line of brass ware and chinaware to the former complete hardware and household goods line.

## A REAL MAN'S CREED

The following was found among the papers of Thomas Van Alstyne, electrical engineer for the Westinghouse Company:

"To respect my country, my profession and myself. To be honest and fair with my fellowmen, as I expect them to be honest and square with me. To be a loyal citizen of the United States of America. To speak of it with praise, and act always as a trustworthy custodian of its good name. To be a man whose name carries weight wherever it goes.

"To base my expectations of reward on a solid foundation of service rendered. To be willing to pay the price of success in honest effort. To look upon my work as an opportunity to be seized with joy and made the most of, and not as painful drudgery to be reluctantly endured.

"To remember that success lies within myself—my own brain, my own ambition, my own courage and determination. To expect difficulties and force my way through them. To turn hard experience into capital for future use.

"To believe in my proposition, heart and soul. To carry an air of optimism in the presence of those I meet. To dispel ill temper with cheerfulness, kill doubts with a strong conviction and reduce active friction with an agreeable personality.

"To make a study of my business. To know my profession in every detail. To mix brains with my efforts, and use system and method in my work. To find time to do every needful thing by never letting time find me doing nothing. To hoard days as a miser hoards dollars. To make every hour bring me dividends, increased knowledge or healthful recreation.

"To keep my future unmortgaged by debts. To save as well as earn. To cut out expensive amusements until I can afford them. To steer clear of dissipation, and guard my health of body and peace of mind as a precious stock in trade.

"Finally, to take a good grip on the joys of life. To play the game like a man. To fight against nothing so hard as my own weaknesses, and endeavor to grow in strength, a gentleman, a Christian.

"So I may be courteous to men, faithful to friends, true to God, a fragrance in the path I tread."

---

It is hard to down an upright citizen.

## "STILL, THERE'S MORE TO FOLLOW"

In answer to a letter from his bank calling his collateral loan, a wealthy man wrote the following letter, a copy of which was received:

"For the following reasons I am unable to send you the check asked for:

"I have been held up, held down, sandbagged, walked on, sat on, flattened out and squeezed. First by the United States government, for federal war tax, the excess profits tax, and the liberty loan bonds, thrift, capital stock tax, merchants' license and auto tax, and by every society and organization that the inventive mind can invent to extract what I may or may not possess.

"From the Society of John the Baptist, G. A. R., K. of C., the Woman's Relief, the Navy League, the Red Cross, the Purpose Cross, the Double Cross, the Y. M. C. A., the Boy Scouts, the Jewish Belgian Relief, and every hospital in town. Then on top of it all came Associated Charities.

"The government has so governed my business that I don't know who owns it. I am inspected, suspected, re-examined, informed, required and commanded, so I don't know who I am, where I am, or why I am here. All I know is that I am supposed to be an inexhaustible supply of money for every known need, desire or hope of the human race; and because I will not sell all I have and go out and beg, borrow and steal money to give away, I have been cussed, discussed, boycotted, talked to, talked about, lied to, lied about, held up, hung up, robbed, and the only reason I am clinging to life is to see what in hell is coming next."

---

## MOUND TOOL CATALOGUE No. 7

The Mound Tool Co., St. Louis, Mo., has just issued to the trade a new general tool catalog, No. 7. All of the items in the Mound tool line are illustrated and described, and especially interesting to the trade is the large assortment of scraping tools, chisels, punches and screw drivers.

The Mound Tool Co. was established in 1899 and incorporated in 1919. They guarantee their tools to be of the best material and workmanship. Any tool that fails to make good will be replaced without charge.

## MEYERS WIRE, IRON AND BRONZE WORK

The Fred J. Meyers Mfg. Co., Hamilton, Ohio has just issued their catalog No. 63, which describes their products along lines of iron, wire and bronze manufacture.

The complete line of the Fred J. Meyers Mfg. Co. consists of machinery guards, window guards, enclosures, iron cranes, fire escapes, railings, signs, iron stairs, iron doors, iron fencing and gates. Wire signs are no small feature and the effects that can be secured are elaborately pictured in the catalog.

The catalog consists largely of illustrations and with it the dealer and jobber have the satisfaction of knowing what they can get. In these days when the filling of orders is the most important problem on the merchant's hands, this new style catalog will be particularly valuable in the hands of the trade

## WHAT SOMETIMES HAPPENS WHEN BUSINESS MEN MAKE NO WILLS

(Copyright by Elton J. Buckley)

Cleveland, Ohio.

I am the sole owner of the above business, which I established about twelve years ago and which has been prosperous since the first year. I am getting along in years and my health is not what it should be, yet I do not intend retiring from business until I die, as I believe that is bad policy for any man, if he is able to keep at it. I have never made a will, and would ask your advice about it. I have a wife and two sons, one of which is with me in the business. I have been told that when a man is on good terms with his family there is no reason to make a will, as the law makes a good enough will for any man, disposing as it does of a man's property who has left no will, with the utmost fairness. Please let me have your views on the subject, which may be of general interest to business men throughout the land. I cannot expect a personal reply, but if this letter is answered publicly, please do not attach my name to it. L. R. A.

Once in a great while there may be a case in which a business man dying without a will can look back from where he is and see the law disposing of his estate exactly as he would have done it, but my experience and observation lead me to believe that probably there is not one such case out of fifty thousand.

A man who has nothing but ordinary personal property to leave, such as stock and bonds, or even real estate, and who is, as this correspondent expresses it, on good terms with his family and wishes to favor them equally, can sometimes afford to make no will, because usually the law will make an equal distribution of his property among his heirs. But leaving a business is vastly different. You can't distribute a business very well, especially when some of the heirs want to continue it and some want to sell it out.

Every business man who is the sole or part owner of an unincorporated business should make a will. If the business is large enough, he would save a lot of trouble if he incorporated it before he died, for after he dies it can be handled much more easily in that form.

Not long ago a business man whom I knew died without a will. He was the sole owner of a thriving business which he had founded, and through many years had carefully built up. When he died it was his chief asset and a very good asset.

He died leaving a second wife and a son by the first wife, who did not get along well with his stepmother. The latter was keenly interested in the business, in fact, the father had married her out of the office. The son had no interest in the business whatever.

The owner of this business should of course have made a will leaving the business to the wife, who was both able and willing to run it. Instead of that he died intestate, that is, without a will, and under the law the business descended to the wife and son in equal shares. The result was dissension from the first, and finally the sale of the business at a great sacrifice.

The making of a four-line will would have saved this.

In another case a business man with a fair-sized estate had also been married twice, first unhappily, the second time very happily. There were children by both marriages, but he had no relations with the first crop at all. It would have been a very simple matter to leave a will giving his entire estate to the second wife and her children, but instead of that he died without a will, and now the children by the first marriage share in the estate, and really get the greater part of it, as there are more of them.

In a third case the owner of a good wholesale business had a son who was most devoted to the business and highly efficient in it. He also had another son who had made his life a burden, and who was a liar and a thief. He should have made a will leaving the business to the good son, and leaving the other, if he wished to leave him anything, a bequest of a different sort. Instead he left no will, and the two sons inherited the business equally. Of course they at once began to fuss, and as the good son was not able to buy out the other's share, the business was finally sold, being bought in by a competitor, with whom the good son got a job.

All these business men doubtless turned in their graves if they knew what their carelessness had allowed to happen.

A man who builds up a business usually likes to feel that it will be held together, as a sort of monument to him, after he dies. There is only one way to be sure that it will be, and that is to make a will which will get it into the right hands. Only in exceptional cases will the intestate law get a business into the right hands.

---

The Tacoma Mfg. & Specialty Co. has acquired a factory site at Tacoma, Washington, where they will manufacture accessories and instruments of various kinds. They will be ready for operation within the next two months. Among the articles to be manufactured are cloth measuring tapes, gum tape machines, computing scales, show cases, store fixtures, etc., as well as accessories and surgical instruments. The plant will be located at 45th and Hood Streets.

## POCKET KNIVES AS HOLIDAY LEADERS

These are the days to polish up the cutlery case and to keep pocket knives in the front of the store and at the tip of the tongue. For where is the man who is not ashamed of the old broken-backed knife he has been carrying? And for a growing boy or girl, there is no better gift to suggest than a good husky whittling knife.

Among the cutlery manufacturers who are making Christmas jack-knife sales particularly easy for the trade is the John Russell Cutlery Co. of Turners Falls, Massachusetts. The Russell Whittlers' Club knife and kit supplies a complete outfit and makes an ideal gift for any boy and many girls.

Packed in a neat cardboard box, the outfit includes the Russell Barlow knife, a whetstone, a whittling manual, soft pine sticks, sandpaper, and a membership button in the Whittlers' Club. On top of this the company offers a medal and prizes to the winners of a whittling contest.

The Russell outfit retails for $1.00 and is attractive as a dealer's proposition. The company is planning a great national advertising campaign to start November 1, and merchants with Russell outfits in stock and with the enterprise to show them, should enjoy a fine holiday business.

## GENCO WINDOW DISPLAY CONTEST THIS MONTH

The national campaign that the Geneva Cutlery Corporation has been using to advertise Genco razors is familiar to the trade and has resulted in increased sales on this standard blade razor to the benefit of dealers throughout the country.

To make this advertising of more direct benefit to the individual dealer, by linking his store with the campaign in the magazine, a window display contest will be featured by the company during the week of November 8 to 13.

One thousand dollars in cash prizes is to be divided among the forty-six dealers making the most attractive displays at that time and the material for dressing the windows will be supplied by the Genco people without charge to the dealer.

In addition to the Display Contest feature, Genco Week is to be a time during which the Genco dealers will make special efforts in demonstrating the individual shaving service which they are enabled to furnish each customer by supplying a razor for the particular kind of beard and skin of the individual man.

The contest is open to any who desire to enter, as no purchase of razors is required in connection with the contest itself.

## NEW COTTON WASTE TEXT BOOK

Much of the difficulty and all the mystery is dispelled from the buying of cotton waste by a perusal of the very well gotten up and clearly worded little book "Clean Clean Thru," published by the Royal Manufacturing Company, producers of Royal Cotton and Wool Waste and Royal Cleaning Cloths.

The various operations (and it is surprising how many operations are involved in the manufacture of waste) are so plainly illustrated by photographs as to make the text easily understood by anyone at all interested in the buying or using of this indispensable accessory of the shop, plant or railroad.

Anybody practically interested may have a copy upon application to the Royal Manufacturing Company, Rahway, N. J.

---

Chanslor & Lyon recently opened a branch office at Spokane, Washington, with Robert Flynn as manager. The new building is located at Second and Madison Streets, and already has thirty employes. This is the eighth branch office of the company.

## PRACTICAL EQUIPMENT FOR GASOLINE, OIL AND WATER

Many a vacation-seeking motorist has had opportunity to thank the inventors of the Service Unit. It has long been customary, among those whose foresight prompts them to prepare against the annoyance and delay of being stalled along the road, to carry with them spare tires, tubes, and extra parts of many descriptions. Until comparatively recently, however, dealers have been unable to furnish adequate provision for the most probable source of touring trouble—running out of gasoline, oil or water.

The Boyle Manufacturing Company of Los Angeles have effectually provided against any such emergency. The Service Unit, manufactured by them, has made it possible for every motorist to carry ample emergency supplies with greatest convenience. Attractively finished containers, of varying capacity, clamp securely and snugly to the running-board. Filling caps and handles are located in the top and a steel channel bar fits over them, preventing rattles, protecting the caps, and eliminating all possibility of loss while traveling. The entire equipment presents a pleasing outfit and is at all times out of the way.

The fact that it so well fills a long-felt need has gained it an instant popularity among motorists and the ready sale, which dealers experience, has proved gratifying throughout the country.

## A SPRING LEAF SHOCK ABSORBER

Roller bearings have been applied to automobile springs to do away with vibration in the new roller bearing shock absorber, which is being manufactured and put on the market by the Atlas Trading and Navigation Co.

In principle, the new shock absorber simply puts rollers between the leaves of the spring, so that when a shock comes, when the spring is compressed, the leaves may give easily and smoothly.

It is an interesting fact that the roller bearing spring was discovered quite by chance. In fact, it was a nail that get in between the leaves of an automobile spring, and in turning allowed the spring to give more easily, that gave the original idea for the device. It has been perfected, until the rollers are set in a metal frame which fits right in the leaves of the spring.

Case-hardened Bessemer steel rollers are placed in special rust-proof rolled sheet steel, die-cut cages, which hold the rollers in place. It is simple and effective. It is said these shock absorbers will add 100 per cent to the tire mileage and save 70 per cent of all the repairs caused by road shock.

For Fords and Chevrolets, the sets retail for $13.75, and for all other cars, $25.00. Any of our readers, interested in such a live new proposition as this, should communicate with the Atlas Trading & Navigation Company, Monadnock Building, San Francisco, and 490 South Grand Avenue, Los Angeles.

Other products manufactured or represented by the company are the California High Speed Lens and Johnson Clear Vision Windshield Wings, both well known to the trade. W. A. Koch is president of the Atlas Trading and Navigation Company, and with him is E. J. Reed. Affiliated with the company is M. M. Harris, for years automobile accessory manager of Baker, Hamilton & Pacific Company of San Francisco.

---

O. E. Gillette has purchased the interest of C. E. Beck in the firm of Beck & Brown at Durham, California. Mr. Gillette recently came from Arizona.

---

George C. Baer, one of the leading hardware merchants at Pendleton, Oregon, is an active member of the Rotary Club there. He recently attended the Rotary Convention at Atlantic City, and on returning reported to his local Club on the Convention.

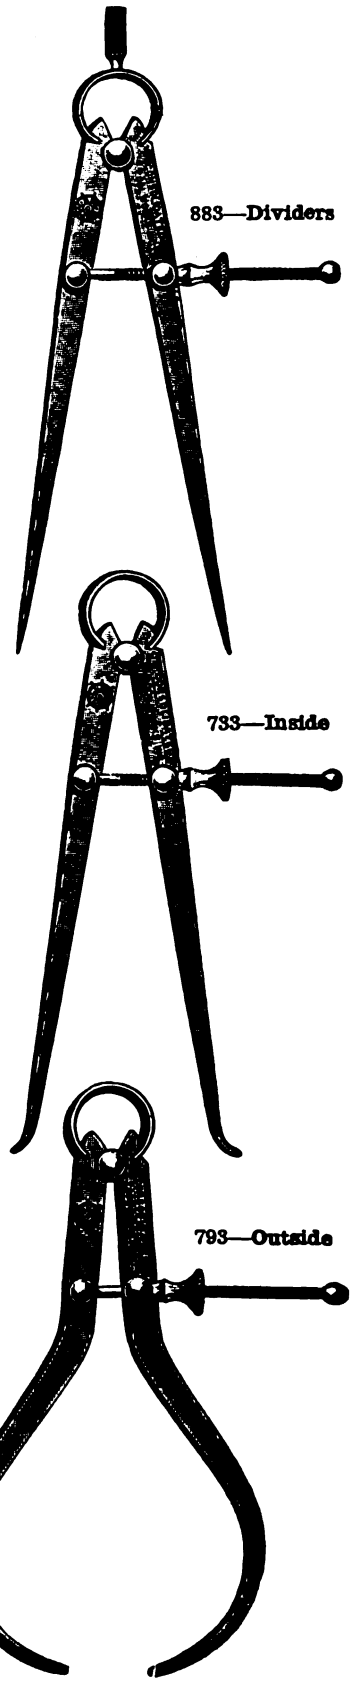
# WHY PILOT TOOLS ARE EASY TO SELL

## Take Calipers, For Instance—

There are but two kinds of Calipers—good and bad. There's no happy medium, because an instrument of any kind must either be accurate or else it is good for nothing. Having these facts in mind, we started out to produce a very low-priced Caliper, yet designed for fine work where accuracy is necessary—and in our purpose we have been eminently successful.

Pilot Calipers and Dividers sell to the trade below the cost of any other line irrespective of quality and they can therefore be sold to the consumer at the same price that he would have to pay for "junk."



To you who have been in the trade for years this statement of price may seem too good to be true, so we ask you to prove for yourself our every word. You can do this by sending your order today for a sample lot and then see how easy it is to sell Pilot Calipers and Dividers.

Please order through your jobber.

**CONSOLIDATED TOOL WORKS, Inc.**

## IN THE SALE OF THE

# $1.50 Each CARBONA $1.50 Each

## Fire Extinguisher

Fire extinguisher **profits** are governed by fire extinguisher **sales.**

In order to profit by the greatest number of sales, you must sell to the **greatest number of people.**

Not only will more people buy Carbona Fire Extinguishers at $1.50 than those selling at higher prices, but they will buy **more extinguishers.**

The average family can afford to buy a Carbona Fire Extinguisher for each room in the house and one for the garage.

You will sell **half-a-dozen** or more Carbona Fire Extinguishers to **one** of the higher price kind and make more money on the sale. At the same time you have the satisfaction of knowing that you are selling your customer six times the protection.

**PRICE**
**$1.50**

We come out boldly with a $1000 guarantee which shows where we stand in selling Carbona Fire Extinguishers.

Now read over the Carbona guarantee and remember this—it plainly states: "Putting out fires." Not simply putting out "a fire" or "some fire," but any kind of a fire—paint, oil, varnish, naptha, benzine, gasoline and all other fires included.

Equip your own store. It won't cost much, but it will mean **real fire protection** and sure sales from the day you install and display them.

Seeing is buying—if it's a Carbona Fire Extinguisher.

## KYANIZE SALES CONFERENCE BREAKS RECORD

The recent annual convention of the salesmen, managers and department heads of the Boston Varnish Co. fairly bristled with new ideas and was the best attended, as well as the most inspiring ever held by Kyanize forces.

There was the usual advantage of comparing points of view from all parts of the country, relating experiences and sales methods that had proved successful, and discussing plans for the future.

One of the most promising and interesting projects is the new advertising program, which calls for more aggressive and far reaching magazine and trade paper announcements than ever before in the history of the Boston Varnish Co. These will be backed by a much more formidable array of dealer helps in the form of window displays, cut-outs, signs and mail campaigns.

As a testimonial to their appreciation for the work of the advertising department, the salesmen gave a beautiful sterling silver tea service of five pieces with a tray to C. A. Dana Redmond, the advertising manager.

One of the features of the convention was the fact that Kyanize jobbers were invited to visit the sales convention and learn with the salesmen the plans of the company:

## MANAGES PITTSBURGH WIRE FENCE

H. F. Hanks is the new manager of the wire fence department of the Pittsburgh Steel Company, Pittsburgh, Pa., succeeding H. J. Miller, who was recently appointed secretary.

Mr. Hanks has been connected with the Pittsburgh Steel Company since 1910. For several years he represented the company as salesman in southern states and on the Pacific Coast. He spent two years in the country's service and until recently has been calling upon the jobbing and manufacturing trade, with headquarters at the Chicago office.

Mr. Hanks is one of the most thoroughly experienced wire fencing men of the country and the Pittsburgh Steel Company is fortunate in having him available for this work.

## PROMOTION WORK THAT PROMOTES

The Winchester Repeating Arms Company is promoting trapshooting, rifle shooting and fishing through bulletins once a month. The Rifle Club Bulletin comes out the first of each month; the Trapshooting Bulletin the 10th of the month, and the Tournament Casting Club Bulletin the 20th of the month, so that a bulletin comes out every ten days.

These bulletins are four page affairs, tastefully prepared, and are full of news. There is no advertising propaganda in the bulletins. They are sent to outdoor associations, country clubs, sportsmen's headquarters, etc., and will be gladly sent to any dealer or customer.

## TAKES THE GRIND OUT OF VALVE GRINDING

The "Just Simplicity Valve Grinder" comes to the automotive equipment merchant as a valve tool to conquer obstacles that have stood in the way of the car owner and the auto mechanic. Simplicity valve tools are manufactured by the Universal Equipment & Supply Company at Syracuse, New York, specialists on valve tools, who have made a thorough study of the subject so that the most perfect results and satisfaction have been secured.

It is the claim of the manufacturers that the Simplicity Grinder is the only single gear, direct-drive, ball-bearing valve grinder made. In principle it depends for rotation on pump action of the handle, which is transmitted to the shaft and adjustable spanner by a simple bevel gear with ball-bearings. It is also the claim of the manufacturers that it is the only grinder adaptable to all automotive engine valves. With it the operator can "feel the work" and it can be adjusted to any size cylinder.

Merchants who want a good valve grinder, or who have trouble with the valve grinder they have hitherto met, will do well to communicate with the Universal Equipment & Supply Company at Syracuse, New York, if their jobber cannot supply them. The tool sells for $2.50 retail in the East and $2.60 in the West.

## PULL-U-OUT IS ALL AROUND LIFE SAVER

The Pull-U-Out winding drum, manufactured by the Pull-U-Out Products Co., 727 Clark Ave., St. Louis, Missouri, is an automobile accessory whose uses do not stop with the motorist. The manufacturer calls this handy windlass "a little thing with a big pull," because with other blocks, by its mechanical advantage it allows the motorist the use of strong power without heavy tackle or machinery.

The Pull-U-Out Winding Drum may be secured equipped with 40 feet of steel cable and chain, or it may be attached to a portable crane, which weighs only 300 pounds, and yet will lift 2000 pounds. Its uses are not confined to the motorist. It has hundreds of opportunities for service on the farm, and is also widely used by mine and telephone companies and machine shops in lifting or pulling any heavy loads. The block weighs only 28 pounds.

In the West the Pull-U-Out Mfg. Co. is represented by the Louis J. Ziesel Co., with headquarters at 853 Walker Ave., Oakland, California. Mr. Ziesel also represents other lines of automobile accessory manufacturers and covers the entire territory west of Denver.

P. H. Krehbiel has opened an up-to-date hardware and implement store at Cutler, California, near Fresno, and in a rapidly growing section.

Charles Rudolph has purchased the hardware department of his brother Arthur Rudolph's store at Lompoc, California, and henceforth will specialize on this department under his own name.

Digitized by Google

## NOTABLE DISSTON ADVERTISING

The extent and the intelligent placing of the advertising of Henry Disston & Sons of Philadelphia has been remarkable to the hardware and tool trade and to the advertising fraternity throughout the U. S. for the past two years.

Merchants are beginning to realize that the character of the advertising of the manufacturers whose goods they are selling is an important factor in handling the line of goods. All things being equal, the tool that is nationally advertised and advertised intelligently to potential buyers and to those who will be influenced by the advertising, that tool will be the desirable one to handle.

In an interesting article in a recent issue of "Printers Ink" Roland Cole describes the Disston campaign and remarks on its extent. It has been their intention to appeal to two classes of buyers, the man who needs saws in his business and the man who uses them personally or in an individual capacity.

Before any popular or consumer advertising was attempted, the campaign aimed to reach the dealers with three objects in view—making new dealer connections, making better dealers, and informing the dealers as to the value and extent of the advertising campaign.

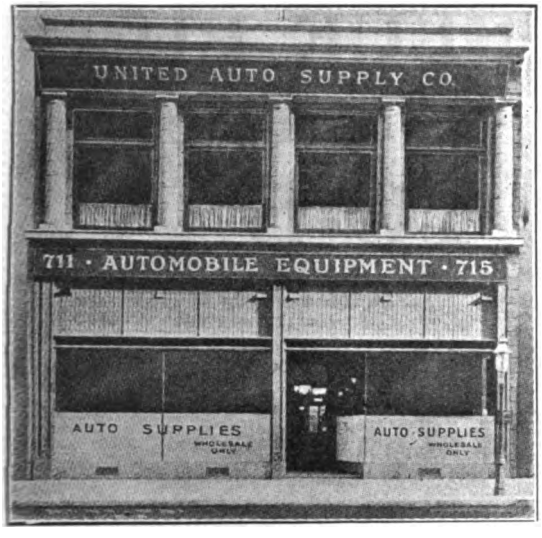
Different classes of buyers were taken in order. First, the professional user, the carpenter and mechanic. manufacturer and saw mill man. Then came classes of possible saw users as individuals, such as the farmer, the American boy, and finally the handy man about the house, which of course includes some millions of householders throughout the United States.

Through advertising in class or trade papers, farm papers, boys' magazines and finally in national magazines with a general circulation, all of these classes of buyers have been reached, so that Henry Disston Co. and Disston Saws have been brought forcibly to the attention of millions of buyers, who are referred to the Disston dealer for their purchases.

## NEW MARBLE ARMS CATALOGUE

The Marble Arms & Manufacturing Co. of Gladstone, Mich., have just issued a trade catalog of their sixty sportsmen's specialties. The Marble line includes safety pocket and camp axes, hunting and fish knives, gun sights and cleaning implements, compasses, fish gaff, waterproof matchbox, auxiliary cartridges, shell extractors and nitro-solvent oil.

## STANLEY DEALERS' STOCK BOOK



Manufacturers now-a-days realize that their sales efforts can sometimes be devoted to larger ends than simply selling their own products to merchants.

Often suggested aids and devices of general benefit to the trade will reflect inestimable benefit on the manufacturer who puts them into use. The Stanley Works, New Britain, Conn., has just issued for the benefit of the trade a Dealers' Stock Book, giving the class number, finish, size and quantity on hand at a certain date and the quantity ordered at a certain date, for the most important items in stock.

The book is arranged clearly so that the dealer may have all this information readily at hand. Merchants, of course, know the importance of being able to put their hands immediately on each item in their stock and any orders that are still undelivered.

Those customers of the Stanley Works who already have the book have found it of immense benefit to them, and those of our readers who have not yet received it and are interested should apply for a copy to the Stanley Works direct.

The Barrett-Hicks Hardware Company at Fresno, California, recently suffered fire loss estimated at $3000 as a result of what seems to have been spontaneous combustion in goods stored in the basement.

## KYANIZE AIRPLANE A MODERN PAUL REVERE

There is a pleasant mixing of classical old colonial history with modern business enterprise in the recent chartering of an airplane by the Boston Varnish Co. for deliveries up through Massachusetts from the factory at Boston. Paul Revere in '75 summoned the minute men to war. The Kyanize Plane summoned all "up to the minute" hardware dealers to the possibilities of heralding Kyanize products to the skies. There was, of course, a two-fold object in the use of the airplane. As an advertising and publicity stunt it very naturally attracted wide attention.

Merchants in such towns as Fitchburg, Leominster. Gardner, Greenfield and Springfield were advised in advance that the deliveries would be made and they advertised the fact in their local papers, and announced the impending visit through their store displays.

We are reproducing one merchant's announcement in a local paper, as well as one of the tickets for a free airplane flight, which were distributed by the aviators in the various towns at the time the plane was calling.

Aside from the advertising value of the plan there was a real business advantage to be gained in overcoming the general railroad transportation difficulties. Some of the merchants in the outlying territory had been for weeks without promised deliveries. So the Boston Varnish Co. decided that these deliveries would be made by air.

Although the use of airplanes is becoming fairly frequent in the field of commerce, nevertheless the completeness of the plan and the thoroughness of detail with which the Boston Varnish Co.'s flights were carried out justify a description a little more in detail.

The plane was painted a bright blue color with the Kyanize trade mark emblazoned in white on the bottom wing and on the sides of the fuselage so that it quickly became known as the "Kyanize Blue Bird." The plane delivered the varnish and then remained in each city a full day, making flights over the house tops and dropping out circulars featuring a free "Can and Brush" offer.

The aviators also dropped several coupons which would entitle the finders to a free flight in the plane. This proved a very successful and interesting feature and in Fitchburg and Greenfield many of the most prominent citizens took flights in the Kyanize Blue Bird.

Dealers heralded the coming of the plane well in advance. The newspapers published articles regarding it, and thus no end of interest was created well before the plane arrived. The entire conception and execution of the airplane delivery of varnish is typical both of the enterprise of the Boston Varnish Co. and the active and worth while cooperation it always extends to its dealers.

Every one of the Massachusetts dealers reported after the campaign that their sales on varnish had increased, and that their general sales had been noticeably benefited by the advertising value which the flights gave to them.

# Every Can Contains Lasting Protection for the Car Owner

**Mohair Top Dressing**
Will give the shabby, leaky weather-beaten top that new appearanace and factory durability. It re-dyes and re-rubberizes making the fabric stormproof, leaving the top soft and pliable.
Pints, 85c; quarts, $1.50

**Re-Knu Upholstery Dressing**
The Upholstery which has become worn and shabby can be made to look as good as new by a coat of this dressing. Puts on a rich and elastic surface, retains the new pliability and affords a good durable wearing finish. Dries in 15 minutes.
Pints, 85c; quarts, $1.50

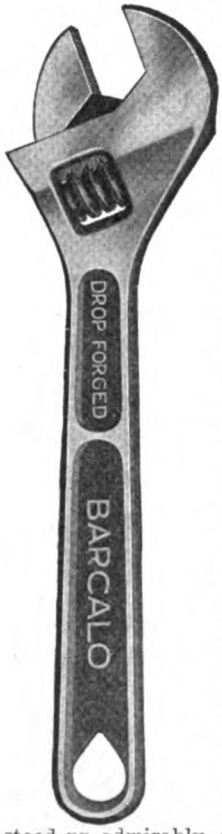
**Drab Lining Dye**
It re-dyes and re-finishes the inside lining a fast light color, giving it that fresh and new appearance. Covers all stains and discolorations.
Pints, $1.35; qts., $2.50

**Dull-Lac Top Dressing**
For all Leather and Pantasote tops — weatherproofs and re-rubberizes —softens and preserves the material, giving it that rich egg shell non-gloss finish.
Pints, 85c; quarts, $1.50

***Factory Representatives Wanted***

**MANUFACTURED BY**

**Auto Specialties Mfg. Co.**
Incorporated
**40 Elm Street, Buffalo, N. Y.**



**Knu-Lac FORD Top Dressing**
A coat of Knu-Lac applied to any FORD, Rubber or Imitation of Leather Top will positively waterproof and re-rubberize it. Gives it that original pliability and wearing quality—produces a rich gloss black durable finish.
Pints, 75c; quarts, $1.35

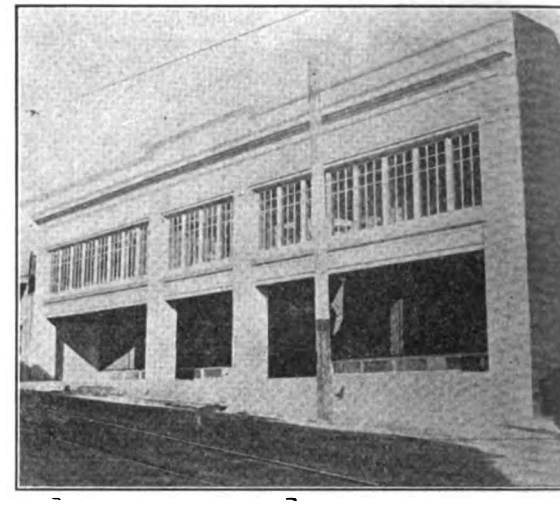
Digitized by Google

It occurs to us that airplane deliveries could well be made by any jobber or sales representative throughout the West, arranging with nearby dealers to advertise the proceeding in advance, featuring the local merchant as well as the product, thus cooperating for the benefit of both and securing real results.

## A WRENCH MADE TO ORDER

The Barcalo Manufacturing Company has been known for more than twenty-five years as manufacturers of metal products, including metal beds and wrenches. Three years ago, the company began to develop a 22½ degree angle open and adjustable wrench.

Their trade reputation and the ability within their organization promised a wrench that would meet the most exacting demands of the hardware and accessory trade. The engineers had instructions to turn out a design equal to any on the market, and to leave nothing undone in the matter of quality.



A special analysis steel gave exceptional hardness and toughness. All working parts were so refined that they would be absolutely dependable, so that all parts would work smoothly, no matter how difficult the position in which the user might find himself. A study in heat treatment got the exact degree of toughness and hardness in the finished wrench. They determined to put a finish on the wrench that would be an index to its quality.

The result of all these efforts is the "Barcalo Model N Wrench." It is the equal of any wrench in the market. Every user is proud of the "Barcalo Wrench." The severest tests have been put on the wrench and it has stood up admirably, under all circumstances.

The Barcalo Model N Wrench, as well as their other wrenches and Barcalo Combination Pliers, are sold to hardware, accessory and kindred jobbers. The Barcalo line is in the stock of very nearly every western jobber at the present time.

Western sales for the Barcalo Mfg. Co. are handled by A. C. Riddel, Higgins Bldg., Los Angeles, and Earl Jones, with headquarters at 3000 Grove St., Berkeley, California.

The Haskins-Mooney Co. has been incorporated at Gallipolis, Ohio, with a capital stock of $12,000. The incorporators are B. V. Mooney, J. S. Haskins, F. A. Haskins and G. Mooney.

## RECALLS THE DAYS OF '49

George A. Legg, president of the Alpha Hardware and Supply Company at Grass Valley and Nevada City, California, has just retired from active management of the business after 32 years.

Not that Mr. Legg is in any respect inactive, for he is one of the keenest, most wide-awake merchants of the West, and the development of the Alpha stores and their steady growth have been a tribute to his active study of the hardware business. Mr. Legg is one of those rare men who is wise enough to realize that others may do the more active work while he enjoys the luxury and the fine things of life which his hard work has earned for him.

The history of the Alpha Company dates back to the gold rush of '49, when Mr. Legg's father was among the pioneers, arriving at Sacramento in the spring of 1850. He settled first at Omega, one of the early mining camps. Contrary to the rules of the Greek alphabet, the town of Alpha was a near neighbor of the town of Omega, and when it came to establishing a hardware business, Mr. Legg and his partner, George Shaw rather selected the first letter of the alphabet than the last.

The business was moved to Nevada City in 1870, and in 1888 Mr. Legg, Jr., took over the business when he graduated from high school. About fifteen years ago, the business in Nevada City was combined with Brady and Cassidy at Grass Valley, forming the Alpha Hardware & Supply Company.

The new Nevada City store which we picture herewith, was built three years ago. The company now operates stores at Nevada City, Grass Valley and Allegheny. There are over forty employes on the pay roll. The present management is divided between J. J. Cassidy, J. A. Curonow and H. G. Rowe. Mr. Legg still retains an interest in the business and will divide his time between Nevada City and the region of San Francisco Bay.

## "HOW TO SELL A SAW"

A book of value and interest has just been published by E. C. Atkins & Co. on "How to Sell a Saw." It is devoted entirely to the one subject, although practically all of the material can be applied to the general line of hardware.

The book is attractive, suitable for library use if desired for that purpose. It has a Castillian cover embossed in gold, is easy, interesting reading and has plenty of illustrations. Any retail dealer or jobber who is interested in increasing his sales is leaving a large stone unturned in his endeavors when he does not have one of these books to read and study.

CAPTAIN C. T. WOODWARD
President National Association Winchester Clubs

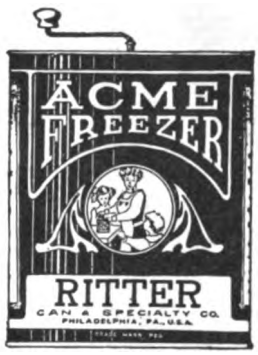
## WINCHESTER CLUB CONVENTIONS

During the past month and for the coming two months state and district Winchester Clubs all over the United States are holding their first annual conventions.

Interest at the far western conventions last month centered in the full line of sample items of the new Winchester tool line, which were shown to the dealers for the first time. Included were: Flash lights, fishing poles, skates, axes, hammers, screw drivers, bits, saws, planes, and general tools. The entire Winchester line when in production will include 3600 separate items.

Secretary W. J. T. Stockley, of the National Association of Winchester Clubs, was in general charge of each state convention. Other Winchester officials who attended the state conventions include: A. C. Moline, Service Department; J. D. Stevenson, Products Department; President C. T. Woodward, former president of the National Hardware Dealers Association, and Sales Engineer W. E. Freeland.

Very naturally while in the West C. T. Knight had general charge of the Western conventions and accompanied the party during September.



Following is a complete schedule of the meetings: Mountain States, August 31 and September 1; Southern California and Arizona, September 7 and 8; Northern California, September 14 and 15; Washington and Oregon, September 21 and 22; Minnesota, North Dakota and South Dakota, September 28 and 29; Iowa, October 1 and 2; Wisconsin, October 4 and 5; Illinois, October 7 and 8; Indiana, October 11 and 12; Michigan, October 14 and 15; Ohio, October 18 and 19; Pittsburgh, October 21 and 22; Philadelphia, October 25 and 26; Kentucky, October 28 and 29; North and South Carolina, November 2 and 3; New England, November 9 and 10.

---

Arthur C. Lake, who has for ten years been with C. H. Rice & Brother, 1502 E. 57th Street, Chicago, has recently purchased the hardware store of Rothrock & Steele, 1218 E. 63rd Street, Chicago. He was out of the hardware line for a year as secretary and treasurer of Kraus Brothers-Loewy Co., the largest cleaners and dyers in the city, but the hardware trade called him so strongly he had to return to it.

---

Walsh & Reed of Moorpark, California, have enjoyed a constant growth in their business, until now they have been forced to make alterations and enlargements to take care of the increased trade.

## NEW CATALOG COVERS MIRRO LINE

A splendid index to the quality of the Mirro line is the new Mirro catalog just off the press. It is distinctly high grade, beautifully printed and illustrated, and of a size convenient to handle.

Mirro Aluminum is the most recently developed product of the many manufactured by the Aluminum Goods Manufacturing Company, Manitowoc, Wisconsin. This company, while one of the pioneers in the aluminum goods industry, did not launch the Mirro line until 1917.

Backed by heavy and conspicuous advertising, Mirro utensils were an instant success, and are now handled by leading dealers everywhere.

Since the war, five new additions have been added to the Aluminum Goods Manufacturing Company's plants. These additions are assisting very considerably in bringing up production and meeting the enormous demand which has been created for Mirro ware.

## ANNUAL PICNIC FOR EMPLOYES

It is an annual event with the firm of E. G. Prior & Co., hardware house at Victoria, B. C., to entertain its entire staff of employes at a big day's outing and picnic. This year's outing proved to be the biggest in the history of the firm when nearly fifty of the happy Prior family spent the day and evening in games, dancing and fun.

A. E. Smith was chairman of the day and Secretary C. P. W. Schwengers acted as host and delivered an address to the employes on behalf of the firm.

## SAVAGE ARMS COMPLETE CATALOG

New catalog No. 61, issued by the Savage Arms Corporation at Utica, New York, is in reality a complete manual and guide book for the owner and merchant of arms and ammunition. Since the purchase of the Stevens Arms Co. by the Savage Corporation, the size, importance and stability of the Savage Co. is so great that the new catalog is worthy of most serious consideration and interest by the trade.

It is liberally illustrated, not only with plates of arms and ammunition, but of hunting scenes and diagrams of the different pieces and the parts of them.

Several pages of suggestions on the care and use of arms and the cleaning of rifles and pistols are added to make the catalog complete. It is a book that should be in the hands of every member of the trade.

The Co-operative Auto Supply Company has just been formed at Denver, Colorado, with a capital stock of $100,000. The company will handle accessories, with branches at Colorado Springs and Rocky Ford.

## AMERICAN AMMUNITION AT OYLMPIC GAMES

American marksmen maintained the reputation of the United States as a nation of shooters at the Olympic games recently held at Antwerp, Belgium, and no less important was the tribute which not only the American marksmen, but other of the competing marksmen, paid to American-made ammunition.

The Remington Arms. Co. reports that the big military team, which was allowed to select its own ammunition, shot with Remington Palma 180 grain .30 caliber Springfield cartridges. This was selected after an exhaustive government test last May. Others who used Remington ammunition were the pistol teams from the United States, as well as the pistol and revolver teams from Brazil and France.

## SIMONDS STEEL LABORATORY COMPLETED

Following out special plans for general advancement in research work, the Simonds Manufacturing Company has just completed an addition 40x50 to its research laboratory connected with its steel mills at Lockport, N. Y. Additional equipment, consisting of a 300 to 500 pound capacity special type electric melting furnaces, several electric heating furnaces and other tools and equipment, has been installed with a view of greatly extending facilities for carrying on development and research work. New formulas and methods for making special steels will be worked out at the enlarged laboratory under the direction of an expert metallurgical staff.

## DISSTON BRANCH AT SAN FRANCISCO

An announcement of interest to the California trade and of significance to the entire West, is the news that Henry Disston & Sons will again have a branch office and warehouse at San Francisco.

Although Disston saws formerly had a permanent home at San Francisco, the branch was discontinued some time ago, and the entire West has been handled from the Seattle office. After a visit to the sales conference at the factory early in the fall, Western Manager Jenkins returned by way of California and installed Lynn H. Minckler in charge of the new branch. The central location is at 144 Second Street.

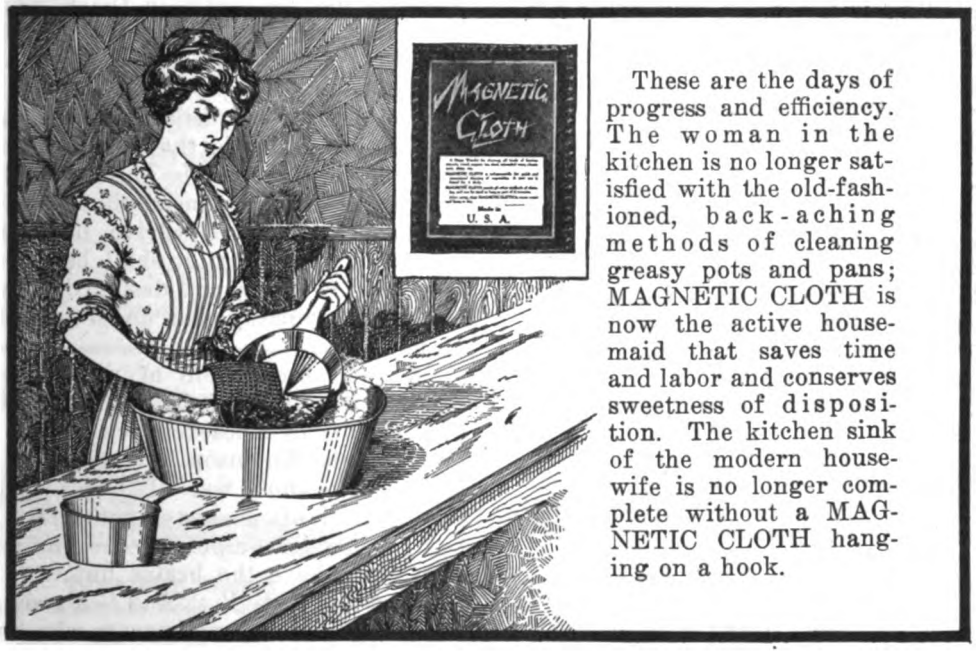
**Successful Campaign on Hack Saws**

However, it does not take a permanent branch with an office force for Mr. Minckler to sell saws or reach his hundreds of friends in the trade. His most recent and most successful campaign has been on Disston Chromo hack saw blades for both hand and power use.

The great saw makers produce a full line of all kinds and sizes of hack saws, and the volume of new business for these in the West has been remarkable. One of the largest sales is reported to have been made through Dunham, Carrigan & Hayden, who now carry a full stock in all assortments.

## THOSE WHO NEED NEEDLES

Perhaps you are one of the hundreds of merchants who are going to experience a rush demand for sack needles in connection with the fall harvest. In case of a shortage in your stock or a difficulty in obtaining prompt shipments it is comforting to know that a full line of sack needles is manufactured in the West.



Barr Bros. Company of Oakland, California, have manufactured needles and cutlery since 1873, and announce a full line of needles of all kinds and all sizes, including sacking, bagging, sail and baling needles. Every needle is warranted by the company. The sales department of Barr. Bros. Company has recently been reorganized and is under the direction of Fred H. Poss. Connections have been made with Hughson & Merton. Inc., at San Francisco, New York and Chicago, to handle the sales.

# MAGNETIC CLOTH

## The Most Complete Domestic Help Device Known

It instantly removes Grease, Burned Foods and all dirts from all kitchen ware. ALSO cleans Vegetables, New Potatoes, Sweet Potatoes, Carrots, Parsnips and such like. ALSO Tile work, Marble or Brown Stone Steps and many other things too numerous to mention. ALSO is used extensively for cleaning stained and greasy hands, for instance in machine shops, garages, etc.

The MAGNETIC CLOTH is as pliable as cloth, entirely as efficient as the best abrasive. Made to slip on the hand like a mitten. After using, rinse in warm water and hang up by the loop, to dry.

As a magic wonder this MAGNETIC CLOTH is demanded everywhere; its market is wide and insistent and it is a logical, inevitable profit-maker for the merchant who reads and heeds the mind of his trade.

# Plumbing and Heating

## THE PLUMBER'S OPPORTUNITY

Only about two and one half million homes in the United States have heating. It means that to figure the available work alone would take about ten and one-half years. And to install it the journeymen would labor close to 28 years.

There are 46,300 hardware stores in the United States with one-twelfth of one per cent properly plumbed.

There are 48,360 drug stores in the U. S. with less than two per cent properly plumbed.

There are 38,069 cigar stores in the United States of which 32,000 have no plumbing at all.

Over 36,000 confectioneries are more than 85 per cent inadequately plumbed.

Of 15,000 schools in the United States, over 32 per cent are not plumbed.

Of 7,500 hospitals, 1,500 are properly plumbed.

It would take from 3,000 to 4,000 years to do all the work at present available.

With 23,500,000 homes in the United States less than five million have any plumbing at all.

---

## THE CAPTAIN OF MY SOUL

Out of the night that covers me,
Black as the pit from pole to pole.
I thank whatever gods may be
For my unconquerable soul.

In the fell clutch of circumstance
I have not winced nor cried aloud.
Under the bludgeonings of chance
My head is bloody, but unbow'd.

Beyond this place of wrath and tears
Looms but the Horror of the shade.
And yet the menace of the years
Finds and shall find me unafraid.

It matters not how strait the gate,
How charged with punishments the scroll,
I am the master of my fate:
I am the captain of my soul.

—William Ernest Henly.

---

Work is the richest of all gold mines. It yields infinitely more than money when tackled in the right spirit.

## HOME AS A CHARACTER BUILDER

The happiest family in the world is the family that finds its happiness in the home. All altruism has its origin in the home; for it is there that cooperation and self denial are combined to promote the common welfare of the group.

The best investment that any father and mother can make is that involved in making their home comfortable and attractive. This does not necessarily mean that the home shall be elaborate and expensive in construction; rather it means that it shall be suited to the needs of the family and designed to cement the bonds of sympathy and understanding among its members.

A good illustration of what is meant by meeting the needs of the family is afforded by an anecdote of Roosevelt related by his sister Mrs. Douglas Robinson. When a child, as is well known, Theodore was afflicted with asthma. His father built an upper porch into which he put gymnastic equipment; then he said to his son, "You have the brains but not the body; now get the body." "And," his sister added, "he did." How many parents who are now regretting that their children have left home can attribute their leaving to so simple a thing as neglecting to provide them with some of the means of entertainment that children crave?

No parent ever ought to forget for a moment that it is in the home that character is built; and if parents wish to have a hand in the building of their children's character they must provide the right sort of workshop—a home. Surely it is the cheapest imaginable protection against dissatisfaction and disappointment in later life. A good home in which children will be glad to stay, in which they are free to entertain their friends and where they find a sympathetic companionship is a kind of insurance that comes pretty near to making happiness in old age secure.

---

Let us cooperate for greater production and increased prosperity, and let the fellow who is weak enough to cut prices at the expense of quality go to it.

# When Prices Will Come Down

(By Harry G. Nye)

I hope I am not a bull, not even in conversation. But I am a bull, as far as the market, and the United States, and future demand, and the immediate outlook, and the distant outlook, are concerned.

When will prices come down?

Not soon, and not much.

I am not a professional optimist. You know there are optimists, and optimists. Some men are optimists because they can't help it, and some men are optimists for revenue only—because it pays.

And then there is the third, and I think the best, class of optimists. They are the fellows who are optimists because they have their ear to the ground, and their eye to the east, and their hand on the public pulse.

That sounds like a difficult position for a man to be in, and keep his balance, but it is the only position a man ought to be in if he is going to preach optimism or pessimism.

So I try to keep my ear to the ground, and my eye to the weather, and my hand as aforesaid. I may be wrong, but at least give me credit for not basing my prediction on how I feel, but rather on what I see, or think I see.

A man has got to get a bigger view than he can by looking at the pigeonholes of one rolltop desk. He must look over the desk, and out of the window, and across the country, to get the right look.

That is the kind of a look I have been trying to take, and my opinion of the plumbing and steamfitting situation is that no one living today will see the time when prices will get back to pre-war basis.

But some fellows say, "There is going to be an adjustment some time. When is it going to happen?"

It isn't going to happen—it has and it is.

And, as far as we are concerned, it is adjusting upward instead of downward.

There have been some reductions in silks and textiles and some other things—but that hasn't made houses any more plentiful than they are, or stimulated industrial or domestic building any more than it is.

A man can live without silk, and he can even get along with last season's underclothes in a pinch. But the demand for houses, for offices, for shops, and for cars is too big to be affected by the collapse of Japanese credits.

Some folks say there is bound to be some sort of slump, even a slump in building prices, and that lumber is a little off already.

But suppose there is—a slump is going to help us instead of hurt us—because we are in a little different position from the manufacturer of silk shirts and pink pajamas.

Demand in our line is large—but it is not nearly as large as it will be if there are some reductions in the cost of building labor and material. I don't look for much in that line, but, if it comes, and the people who would like to build and are holding off on account of the cost, come into the market, I look for us to be twice as busy as we are.

We are pretty well blessed with business as it is. In talking recently with the president of the largest tubing company in the world, he made the statement to me that, while he looked for a serious depression sometime, it would not affect him, because already he was practically sold through 1923.

The same conditions exists with the big porcelain bath tub manufacturers.

There never has been such a tremendous need for building and never such a tremendous necessity for extensions in all public utility corporations.

For years there have been no repairs to any material extent on the railroads—and now the railroads are in the market and are sure of the money. If you don't think so, look at your next freight bill.

I don't say there are going to be any great reductions in basic building materials in the face of such demand—but I do say that, if they do come, it is going to help us rather than hurt us.

I don't say there are going to be any material reductions. There have been a lot of fellows sitting around now for several months waiting for things to come down—and they are getting blisters from doing it.

If things come down a little they are going ahead—and I think they are about ready to go ahead any way. I think as soon as people become aware of the fact that prices are not going back to where they were before the war that we shall get a wave of prosperity such as we have never heard of.

I am going right ahead with my business, believing that there is no chance of a slump.

But, if it does come, it is going to be just enough to accelerate building. I think that is the position of our line—and it looks to me like a good position to be in.

## WORKING UNDER "BACK PRESSURE"

The other day I was over watching the engineers testing out the new engines.

They put on an indicator card and so adjusted the valves that the steam would enter each end of the cylinder at just the proper time, so that at no period would there be steam entering both the sides of the cylinder at the same time, creating what they called "back pressure."

In other words, it is the height of extravagance to waste steam by permitting it to exert its pressure against both sides of the piston head at the same ime.

And then I got to thinking how this applied to the business in general and how many concerns failed entirely or made but little progress because they were constantly working under back pressure.

Every time the force of the organization, which force, of course, costs the company a heap of money in salaries, expenses, etc., begins to work against itself, there is back pressure.

Jealousy is back pressure.

Gossip is back pressure.

Lack of cooperation between departments is back pressure.

Back pressure differs from friction inasmuch as friction is the loss of power due to resistance from the natural forces of gravitation, adhesion, etc., which natural forces cost nothing to create.

But back pressure is where you actually spend money to produce one force to work against another force which also costs money to create.

If we could only get an indicator card upon the human forces and ascertain as easily as we do with the steam engine where back pressure exists; and, if when the back pressure is discovered, we could remedy the trouble by a little regulation of the valves, that would be some scientific management.

## SOME PLUMB MAXIMS

To serve my customers, I must have an adequate supply of staple articles.

To save myself, I must convert into cash any slow-moving items and surplus stock.

Delivery is more important than price. I must not be tempted by bargains to buy anything I may not find readily saleable.

It is better to pay the price for what I need when I need it, than to place future shipment orders unless it is necessary to get delivery.

I should sell whatever I buy for a fair profit over the cost of doing business. I must not allow myself to be misled by the clamor for lower prices into sacrificing a fair profit for myself or into failing to stock articles which are actually selling.

## MANUFACTURERS MONTHS BEHIND

Editor HARDWARE AND PLUMBING WORLD:

We have had advances in enamelware, pottery and a contemplated advance in soil pipe. As these three branches constitute the main cost of building houses, you can readily see that prices are not going to be cheaper in building construction.

Material is higher and hard to obtain, owing to conditions of the railroad, and labor remains high with no prospects of efficient labor being secured.

We are still two months behind in our production, and orders continue to come in as in the past. The manufacturers of enamelware are ten months behind their deliveries. Yours very truly,

THOMAS SAVILL'S SONS,

Philadelphia. R. G. Savill.

The Sanitary Plumbing Company at 223 East Third Street, Long Beach, California, will henceforth handle heating appliances and do a jobbing business also. Henry Robinett is the proprietor. Associated with him is W. R. Corrin.

## HE PROFITS MOST WHO COVETS PROFIT LEAST

A business can be built in a year, in a month, even in a day; or the building of a business can command the greatest efforts of a lifetime.

Craft, cunning, shrewdness, if diligently practiced, may bring a result resembling success; but the constant application of sincerity, experience, and craftsmanship build for a success that all others can but imitate and envy.

A great thinker once said, "A business is but the lengthened shadow of a man." Whatever is your aim, your ideal—rest assured that it is known to all with whom you deal.

Let no man be mistaken. Just as his true character will be known to his friends, so will the dominating idea behind his business be apparent in every transaction.

The business that, spurning opportunties for mean profits, devotes its entire energies to the development and maintenance of a reputation and quality, often envies the seeming progress of a sharp-trading competitor.

But such a business has none to envy. As by natural right, the superior quality of its product, honestly maintained, brings to it the friendship of each user. This friendship, multiplied again and again, builds a Good Will that is the greatest reward in business.

A business carrying the Good Will of its customers has little to fear. Temporary set-backs and interferences it may have, but as long as its ideal is maintained, it will rise above small mistakes and errors.

Let the directors of such a business keep their greatest asset and duty ever in mind, and profits will be satisfactory.

Look at the businesses that have had more than ordinary success. Who are they? They are the firms that do more than their duty, that give more than agreed, that work for quality and service rather than for profit.

For it is the rule that he profits most who covets profit least. —Disston Crucible.

## TO CLEAR UP A LEGAL MISUNDERSTANDING

(Copyright, by Elton J. Buckley.)

There is considerable confusion and misunderstanding among the trade over a recent decision of the United States Supreme Court, again involving the rights of a seller of merchandise to fix the resale price. The case was that brought by the United States against A. Schrader's Sons, the Ohio manufacturers of automobile tire valves, pressure gauges, etc. At first glance it looks as if the decision was inconsistent with the same court's decision in the Colgate case, which affirmed the right of any seller to choose his own customers, even to the point of cutting customers off because they would not hold a certain resale price.

The Schrader decision is not, however, inconsistent with the Colgate decision and does not upset it in the least.

The Schrader concern was indicted in Ohio at the suit of the United States Government, charged with requiring tire makers and dealers to execute uniform contracts concerning resale prices, and with refusing to sell those who did not enter into such contracts and hold the uniform fixed resale prices. This was claimed to be a restraint of trade and a suppression of competition.

The first court that took a whack at this case threw it out because it thought the Colgate case decided that such a case could not be brought unless there was a monopoly or an attempt to create one, through the plan to limit prices. The Government appealed to the United States Supreme Court, which reversed the lower court, by deciding that such a case could be brought. The indictment was sustained, and the Schrader concern will now have to stand trial. Very probably under the law as it is now fixed, it will be convicted.

The United States Supreme Court's decision in this case merely adheres to the decisions in several earlier cases, and does not touch the Colgate decision at all. So it is still the law that a seller may refuse to sell any buyer who fails to maintain the price which the seller thinks should be maintained.

The distinction between the two cases lies in the contracts which the Schrader concern compelled its customers to sign. Anybody handling the Schrader goods had first to sign an agreement not to resell except at certain prices. Once this agreement was signed, the Schrader Co. would sell, but not till then. If the customer later broke the contract, Schrader & Son would not try to compel him to keep it, but would simply refuse to sell him again. The only part of the scheme that was wrong was the contracts, for the Supreme Court has decided in many cases that a seller can do nothing which will interfere with the perfect freedom of the buyer who has bought goods and paid for them, to resell them in his own way and on his own terms. A contract entered into by the buyer in advance, to resell only on the sellers' terms—if such contract is good—ties the buyer's hands as to resale, restrains his right to compete with his rivals and establishes a real restraint of trade. On the other hand, in cases like the Colgate case, the seller doesn't tie his buyer up with any contract at all. He sells without any string to it, but indicates, in some way, what price he thinks the buyer should get when he resells. The buyer is free to get that price or not, but if he doesn't get it, the seller will refuse to sell him any more, and he (the seller) will also be within his legal rights if he refuses to sell anybody else who sells him. All this is settled and fixed forever unless the United States Supreme Court reverses itself.

The Schrader concern was exceedingly foolish for using the contracts it did. They could not be enforced, anyway, except by refusing to sell the cutter any more goods, and that, which was the only effective thing in the scheme, could have been done anyway without the contracts. In other words, by the introduction of something entirely useless, they made the whole plan illegal.

In order to make the entire situation clear, let me repeat a little: Any man with goods to sell can legally say to his buyer, "I think you should resell these at not less than $1," and if the buyer ignores this and resells at 90 cents he can refuse to sell him again, or to sell anybody else who sells him.

But he (the seller) cannot put his buyer under contract to resell at $1 or more, for that is restraint of trade.

# Advice To Voters

(By Harry G. Nye)

After spending a lot of time, money and ink, the two leaders in the Political League have named their batteries and lined up for the championship game for the Presidential pennant—to be followed by the world's series with the League of Nations later. Manager Hays, of the Elephants, announces that an unknown phenom named Harding will slam 'em over the pan for the Republicans, with Kid Coolidge of Massachusetts on the receiving end.

The Mules will pitch the well known moist ball artist, Cox, with Roosevelt who comes from a family of great players, collecting his benders. It looks like a good game—Mules, Elephants, with plenty of peanuts and red lemonade on the side.

Far, in fact entirely removed, be it from us to discuss the merits of the respective teams or pitchers. Occupying a distinctively bleacher seat in this contest, we wish only to admonish a few of our fellows on how to act so that we may not be ejected from the grounds or soaked on the bean by the indignant pop bottle thrown by the infuriated populace.

The grandstand seems to be pretty solid for Harding, but over here among the proletariat there is going to be more difference of opinion—and difference of opinion in the bleachers sometimes means bloodshed, when in the grandstand it would mean only an occasional slap on the wrist.

Now, a reasonable difference of opinion is good for us; but it doesn't pay to get excited. Our advice to the ordinary business man in these times would be to munch our peanuts quietly and gargle our throats with our pop without undue noise, have our opinion without being too insistent about it, and, whichever side we are for, or against, to accept the result of the game with decorum and go back to our shops after it is over determined to make the best of it, even though we may be inwardly convinced that the country has gone to the demnation bow-wows.

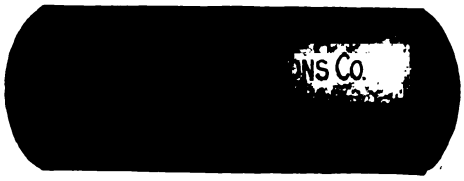
There has been a good deal of complaint by convention orators in the recent past that business men do not take enough interest in politics, and that may be true; but there have been some glittering exceptions where they have taken more interest than was good for their own good. We have always put down in our own individual mind as the prize chump the man who quarrels with his customer over politics. A man ought to take a reasonable interest in the game, but there is no sense in standing up and waving one's arms and crushing in the lid of the man next to us, especially if he is the man on whose friendship our business welfare depends. Of course, a man ought to have the courage of his convictions; but a man who carries a six-shooter can have the courage that goes with it without shooting up the neighborhood and the neighbors, just to show that he has. Someone has said that the fellow who invented the Colt made all men equal; but that doesn't mean that, just because we have a Colt, we have to change somebody into a sieve every few minutes just to show that it is in good working order.

So, have your political convictions, but don't get pugilistic about them. "The man convinced against his will is of the same opinion still," and added to it he has the opinion that you are a radical, and that he doesn't like you, and that he would rather give his business to somebody else. If you want to talk politics go out in the back yard; if you want to talk business stay in the shop and talk shop. The customer is likely to be much more interested in what you think about stop-cocks than what you think about Jimmy the Same, and in what you think about couplings than what you think about all the Hardings in the world and Marion, Ohio.

And we don't believe that the country is going to the aforesaid bow-wows even if Cox or Harding does win. In a hundred and fifty years of history the country has shown what it can stand, by what it has. Your fathers will tell you that there were a lot of people who were convinced that the nation would never go through the seventies—but it did. We've had wildcat money and wildeyed reforms and come through. We've had war and peace and survived.

A few years ago we all had to dig down and buy a bale of cotton to help the starving cotton-growers—but the cotton-growers seem to be doing pretty well now, although, of course, they have to turn around and spend it all for fertilizer immediately. Why, even the raisin-growers a few years ago were wondering what we were going to do with all the raisins they raised. Well, you know what we are doing with them.

So, keep your temper, vote your ticket, let your neighbor have his opinion, bum though it may be. Hang out the "Business as Usual" sign, and get set to take care of an unusual business, whichever way it goes.



---

The entire Everhart family are cooperating and making a plumbing business at 3902 East First Street, Belvedere, Los Angeles, a huge success. Mr. Everhart is a master plumber, and in his business is assisted by his son. Mrs. Everhart keeps her weather eye out for the office details.

## ELIMINATION OF WATER HAMMER AND PULSATION FROM HEATING SYSTEMS

While a certain amount of noise from a heating system may not be especially objectionable in the case of a manufacturing plant, it may be a serious matter in connection with a church, school, library, theatre, hospital or office building.

Water hammer and the pulsation of steam in the supply and exhaust pipes of engines are particularly objectionable.

It is not so very many years ago that water hammer was thought to be a necessary accompaniment of a steam-heating system. While not common at the present time, owing to a better understanding of its cause, it must be carefully guarded against in the design and installation of all heating systems of this kind.

The cause of water hammer, in steam and overhead or "dry" return pipes, is due to the mingling of steam with water at a somewhat lower temperature. This causes a sudden condensation of a certain volume of steam, thus forming a vacuum in the space formerly occupied by the steam, which is instantly filled by water and steam rushing together at a high velocity and producing a loud report.

If there is a considerable amount of water in the pipe, the momentum which it gains at this time is sufficient to drive it to the end of the line, or until it reaches an abrupt turn where the force is sufficient to strike a heavy blow, sometimes resulting in the rupture of a fitting.

This agitation of the water causes a more intimate mixture with the steam, which tends to produce a repetition of this action in rapid succession.

### Reduce Steam Contact

The remedy for water hammer is evidently to reduce the area of contact of steam and water to a minimum and to prevent steam from coming in contact with water at an appreciably lower temperature.

The first condition is secured by proper drainage, using sealed returns, wherever possible, and employing pipes of ample size well graded toward the boiler when overhead returns must be used. All pockets should be eliminated for the accumulation of condensation, either by changes in the piping or by special drips.

The second condition may be avoided by the prevention of "short circuiting;" that is, by inserting siphon loops wherever it is necessary to drain a pipe into another carrying a slightly lower pressure.

The differences in pressure just referred to are too small, in most cases, to be indicated by a steam gauge, and are due to variations in distance from the source of supply, too small pipe sizes, etc. Drip connections of this kind, without siphon loops, admit just enough pressure to hold back the cooler condensation from more distinct returns and keep it surging in the pipe, thus producing ideal conditions for water hammer as previously described.

If a siphon is inserted at the radiator on the line nearest the boiler, dripping that radiator directly into the return main, any slight difference in pressure will be balanced by a variation in the water level in the two legs of the loop. Furthermore, the area of contact between the steam from that radiator and the cooler condensation from the radiator is reduced to the sectional area of the drip pipe from the former.

This same principle will occur in many different forms in a large plant and should be applied whenever there is a possibility of short-circuiting.

Another cause of surging and water hammer, which is sometimes found in low-pressure gravity systems, even though sealed return mains are used, is the variation of boiler pressure. In plants of this kind the steam is frequently allowed to drop in the middle of the day, and the fire is then started up rather briskly.

When there are long runs of piping the rising pressure does not equalize evenly in all of the branches, which produces an unbalanced condition and sets the condensation to singing in both the overhead pipes and the sealed returns.

This is more likely to occur in institutions, industrial buildings, etc., where the piping system is extended, than in dwelling houses.

The most reliable remedy is to stabilize the steam pressure by raising the boiler pressure to a point 5 or 10 pounds above that carried on the system and reduce by means of a regulating valve. This confines normal pressure fluctuations to the boiler and maintains a steady pressure on the piping system.

### Noise From Pulsation of Steam

This is more or less frequent in combined power and heating plants. An engine may be well adjusted and run smoothly, yet adjacent pipes may acquire a regular vibration or swing, which, in some cases, may be communicated to the entire system of basement piping.

This form of vibration is due to the pulsating flow of steam through the pipes, which is a result of the periodic admission and cutting off of the steam at the engine. These pulsations, although of small magnitude, are applied with such regularity that a considerable swing to the pipe is maintained. Any attempt to stop this by anchoring will simply transmit these vibrations to the building construction.

While conditions of this kind and their elimination, strictly speaking, come under the charge of the power engineer, still in many cases both the high and low pressure piping is installed by the heating contractor and he is usually the one called upon to remedy all

Digitized by Google

noises, whether they relate to the power or ventilating equipment.

The only practical method of eliminating vibration due to pulsation is to employ some means which will produce a steady flow of steam through the pipes.

**Equalizing Chamber**

This may be done by the introduction of a receiving or equalizing chamber in the supply branch to the engines, placing this as near to the latter as practicable. This should have a volume 10 to 15 times the combined volumes of the high pressure cylinders running at one time, depending upon the length of the pipe and the number of turns.

The longer and more crooked the pipe, the greater should be the volume of the receiver. In addition to this, each engine should have an additional separator having a volume about 3 times the high-pressure cylinder, placed close to the throttle.

**Exhaust Pipe Vibration**

May consist of mechanical vibration in the pipe itself and air vibration due to the intermittent discharge of steam into the atmosphere. This condition may often be improved by a slight change in the valve setting so as to delay the release at the end of the stroke and so exhaust the steam at a lower pressure. If a single engine is to be provided for, and the outboard exhaust pipe can be made with a minimum of bends and of ample size, there is likely to be but little trouble. With two or more engines exhausting into the same pipe, vibration is much more likely to occur. In this case the branches from the different engines should be connected with the exhaust header, or horizontal portion of the main, at an angle by means of Y branches. This portion of the main should be from 25 to 30 per cent larger in area than the combined areas of the branches connecting with it, reducing again to normal size for the vertical rise through the roof. This has the effect of a receiving chamber.

---

Victor Mattson at Monroe, Washington,, announces that henceforth he will carry a complete stock of electric washing machines, vacuum cleaners and lighting fixtures in connection with his plumbing business.

## A WORD TO THE WISE

Order your winter requirements **NOW** so as to insure delivery. Bear in mind that there will again be a shortage of torches and furnaces later. Also consider that orders are filled according to the date they are received.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

# Quick Turnover and Good Profit

**Compare aluminum with other metals from which cooking utensils are made. The advantages of aluminum are instantly apparent. It has durability without weight, and is therefore easy to handle. It takes heat quickly and holds it long.**

**There is a merchandising advantage in stocking VIKO, The Popular Aluminum. The line is complete. It fills every stock need. The utensils are practical in design, and sturdily constructed. Viko is made from sheet aluminum, not cast or spun. The excellence of Viko quality combined with the popular Viko price makes for quick turnover and good profit. For dealer proposition**

Hardware, Furniture and Implement business in one of the best irrigated sections of the Sacramento valley. Stock will invoice between $35,000 and $40,000. A good business with a big future. Sales for the first six months of 1920, $50,000. Buildings for sale or lease. Address C. & H., care HARDWARE WORLD.

**FOR SALE**

One wanted to sell Coal, Gas Ranges, and ness in Rocky Ford, Colorado, one of the best towns of its size in the country, located in a prosperous irrigated section. Business in flourishing condition and increasing each year. Stock clean and bought at right prices. Business is clearing big money over and above salaries of proprietors. Low rent. Stock and fixtures will inventory about $17,000. No bonus asked. Proprietor wishes to retire. Anyone interested write for further particulars. Address Butterfields, Rocky Ford, Colorado.

**WANTED**

Someone who likes to do general shopwork, such as repairing tinware, making dryer pipe, plumbing, setting up machinery and helping in the store. Want someone who takes an interest in these things and is glad to do it. We live in a town of 250 people, with good school, churches, good surrounding farming country and good climate. Everything is congenial, but we would like to have someone who is a hustler and will be glad to look after the interests of the trade. Write, advising what salary is expected. Address S. & C., care HARDWARE WORLD.

**TRADE RHYMES $1.00**

Any advertiser can have a three verse trade rhyme or five two-line slogans sent them on approval by investing $1.00. Send any suggestions or circulars to (Reegtherhymer) H. Summer Geer, Studio No. 62, 209 Dyckman St., New York City. Suggestions selected and used $1.00 each.

**FOR SALE**

The best paying Hardware and Implement business in Fresno County, California. We make this statement with the full knowledge that such an assertion sounds broad, but evidence will be available to really interested parties. Address Hardware, care HARDWARE WORLD.

**SALESMAN WANTED**

High grade salesman calling on wholesale and large retail trade in Oregon and Washington to sell several leading factory lines, on commission. Socket Wrenches, Electric Lamps, Blow Torches, Towel Bars, Metallic Gas Tubing, Automobile Tubes, etc. Good opportunity for the right man. Add. H. G. E., care HARDWARE WORLD.

**POSITION WANTED**

As assistant manager or director of a housefurnishing department in a retail or department store is the position I would like. Nine years' experience should be sufficient to guarantee my ability to fill the position. Twenty years as a road man, visiting this same trade, has kept me in touch with the line specified. Salary no particular object, but a living remuneration expected for my services. Address G. S. H., care HARDWARE WORLD.

**FOR SALE**

Hardware Store, clean up-to-date stock hardware and household utensils. One of the best locations in San Francisco. Excellent lease, cheap rent. Ten to twenty thousand will handle. Address T. K., care HARDWARE WORLD.

**FOR SALE**

Hardware, Electrical and Sporting Goods store. Established 38 years in one of the busiest growing sections of San Francisco. Owner wishes to retire. Bargain for cash buyer. Address Box 2744, care HARDWARE WORLD.

**POSITION WANTED**

As manager or assistant manager of a wholesale hardware house in a western state, age thirty-three, thirteen years' experience. Have worked in all departments from bottom to top; warehouse, stockroom, filling, packing, checking, shipping, retail, traveling, pricing and buying experience. Can handle men, am congenial, sober, etc. Correspondence solicited. Address F. B. M., care HARDWARE WORLD.

**FOR SALE**

Hardware, Furniture and Implement business in one of the best irrigated sections of the Sacramento valley. Stock will invoice between $35,000 and $40,000. A good business with a big future. Sales for the first six months of 1920, $50,000. Buildings for sale or lease. Address C. & H., care HARDWARE WORLD.

**FOR SALE**

Hardware and plumbing stock and business; new, clean and up-to-date, in a good, live town of about 20,000 population in Southern California. Desirable place to live. $13,000 quick sale will handle. Address Geo. L. Wing, Banning, California.

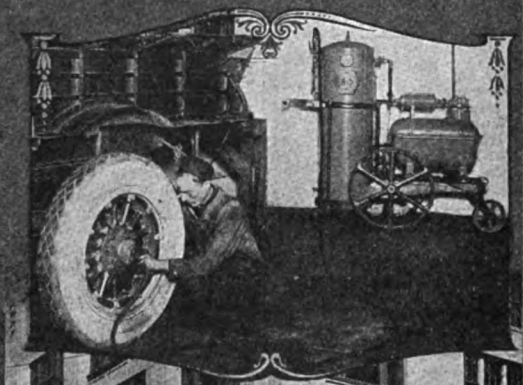
# BLACK & DECKER

## No. 46 ELECTRIC COMPRESSOR

*"Compact and Reliable"*



EVIDENCE

The S. S. Pierce Co., Boston, Mass., is one of the largest grocery houses in the country. They operate 45 pneumatic tired trucks and 30 automobiles, the inflation of which is being taken care of entirely by one Black & Decker No. 46 Electric Compressor (Portable Automatic Tank Outfit).

The picture below shows their fleet of pneumatic tired auto cars. The S. S. Pierce Co. have their own fleet station, of course, and twice a week at night every tire is tested and any registering less than full pressure are brought up to full inflation with the Black & Decker outfit as illustrated.

Mr. W. M. Clark, Superintendent of the S. S. Pierce Co. fleet station says:

"The Black & Decker No. 46 Outfit is absolutely satisfactory in every respect and does not give us a particle of trouble."

# Always keep a Can in Your Tool Kit

THE car-owner who fully **understands** the inconvenience and possible **dangers** of leaks in the water cooling system, always carries a can of "X" Liquid.

A leak in the radiator usually happens unexpectedly. Wherever one happens to be, it is best to have on hand the only **scientific** product that will make a **permanent repair** in a few minutes.

While the careful car-owner always carries along a can of "X" Liquid, the man who is still **wiser,** keeps "X" Liquid constantly in the water.

He then has the satisfaction of knowing that a leak can **never happen!** The "X" Liquid combines with the water, circulates freely, and repairs the leaks **before** they give trouble.

Furthermore, the same "X" Liquid that repairs leaks, also loosens the Rust and Scale from the cooling system walls. And so long as "X" is present, no **new** Rust or Scale can form. It works perfectly in alcohol or other reliable anti-freeze.

* * *

THE confidence of over 3,000,000 car-owners in "X" Liquid has been built up by repeated demonstrations of its value in repairing old leaks and preventing **new** ones. These car-owners know that soldering is risky, uncertain, and unscientific — whereas the "X" Liquid process is quick, safe, certain, and economical.

Whether a cooling system springs one leak or one hundred—whether these leaks are in the radiator, pump, waterjacket, gaskets, etc., "X" makes a **permanent** repair that stands 2000 pounds pressure.

Not alone does "X" save money on leaks; but by eliminating and preventing Rust and Scale it **improves cooling** and helps to get better **engine** performance.

### *Not a Radiator Cement!*

Don't confuse "X" Liquid with cements, flaxseed meals, or other "dopes" in powder or liquid form. "X" is a patented **scientific process.** It is used by the U. S. Government, Standard Oil Co., American Tel. & Tel. Co., and others whose standards are equally high. For safety's sake see that the big "X" is on every can.

### *To Dealers!*

It is recognized as good business to **concentrate** your capital and your efforts. Sell the one product that you are satisfied is **best** for your customers.

Over 25,000 dealers sell "X" Liquid. Many sell "X" exclusively. They find that it is not only the most satisfactory to sell, but leaves them a **good profit.**

### *Stock the Special Assortment!*

This assortment is a favorite with dealers everywhere. It consists of twelve 75c cans and six $1.50 cans of "X" Liquid. One $1.50 size can is included—FREE. This assortment costs $12.00. Sells for $19.50. Can be turned over many times a year. Ask your jobber, or write direct to us.

# Who Buys Dexter Washers?—No. 1

## The Farm Woman

THE farm woman is a keen judge of values. With a hundred other details requiring attention, the chance of "cutting washing time in two" strongly appeals to her. She is quick to appreciate the time and labor economy of the Dexter Double Tub—a complete washing unit which requires no stationary tubs or other special equipment. She has the crop money, too—she is one of your finest prospects for this popular, money-making Dexter model.

### The Dexter Double Tub

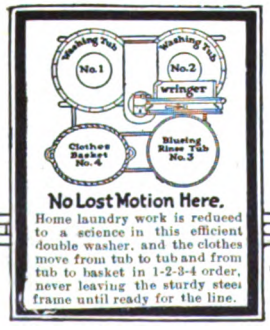
has complete washing gearing in both tubs—the equivalent of two washers in the space of one. But you can sell it for less than some single tub models.

It washes, rinses and wrings by power—all at the same time if desired.

Its sturdy wood tub and steel frame construction make it almost indestructible. It embodies only the finest of materials and workmanship.

Equipped for belt or electric power; equally practical for farm or city use—for large or small families.

### The Dexter Line



is complete. A large variety of models—electric, belt or hand power—enable you to meet every washer requirement. You need not carry various makes of washers or bother yourself with complicated matters of ordering, shipping and billing.

There is a comfortable margin of profit in Dexter washers that justifies concentrated sales effort—and you turn your money more often by having one complete line than various single numbers.

All Dexter washers can be furnished with 32-volt motor for use with farm lighting plants.

Our sales plan helps you interest your farm prospects in Dexter Washers and brings them in to see your demonstration. We have a special series of mailings for "The Farm Woman," "The Practical Housewife Who Does Her Own Washing," "Mothers Who Must Wash Frequently for Little Folks," and "Men Who Weigh Values."

Let us tell you how we are handling these special lists to make money for our dealers—also outline our attractive exclusive agency proposition.

**No Lost Motion Here.**

Home laundry work is reduced to a science in this efficient double washer, and the clothes move from tub to tub and from tub to basket in 1-2-3-4 order, never leaving the sturdy steel frame until ready for the line.

The new Dexter Catalog, fully illustrated and conveniently arranged for the use of Dexter dealers, is just off the press. You'll want it for reference, whether you sell Dexter washers at present or not. Shall we send you a copy?

# A MANILA ROPE for EVERY PURPOSE

**The Whitlock line of Manila is unique; it offers to Jobbers and Dealers a Rope to meet every competition whether on quality or price—and to users a rope suitable for any purpose.**

**Our line consists of three grades of Manila Rope, each 100% pure—we make no mixed Manila—as follows:**

The Rope that Endures
WHITLOCK
ALL-MANILA

## WHITLOCK ALL MANILA

This is strictly a quality article guaranteed superior to Government Standards in quality of fibre, yardage, strength and tare. It represents "The Utmost in Rope Value," and is worth all it costs.

ATLANTIC
PURE
MANILA

## ATLANTIC MANILA

A high grade rope in every particular, made in the same careful manner as our Whitlock brand. It enables a dealer to meet other makes of rope offered as first grade but at a cut price, and will usually prove equal or better value.

We guarantee the yardage and breaking strength to equal Government Standards.

Merchant
100%
Manila

## MERCHANT MANILA

Distinctly superior in appearance, strength and wear to the Hardware grade—whether made of New Zealand hemp or a mixture of Manila and other fibres—to which dealers have been accustomed.

100% pure Manila and made according to Whitlock Standards, it represents a saving in first cost and in many cases answers the purpose of our other grades.

**Whitlock Quality can be bought only with our trademark stenciling and guarantee tags, but on the other two grades distributors may use a brand of their own choosing, if preferred.**

**Each grade is guaranteed by us to give satisfaction and is warranted as to material and workmanship.**

***Either you are satisfied or we are not***

# DISSTON

## SAWS AND TOOLS

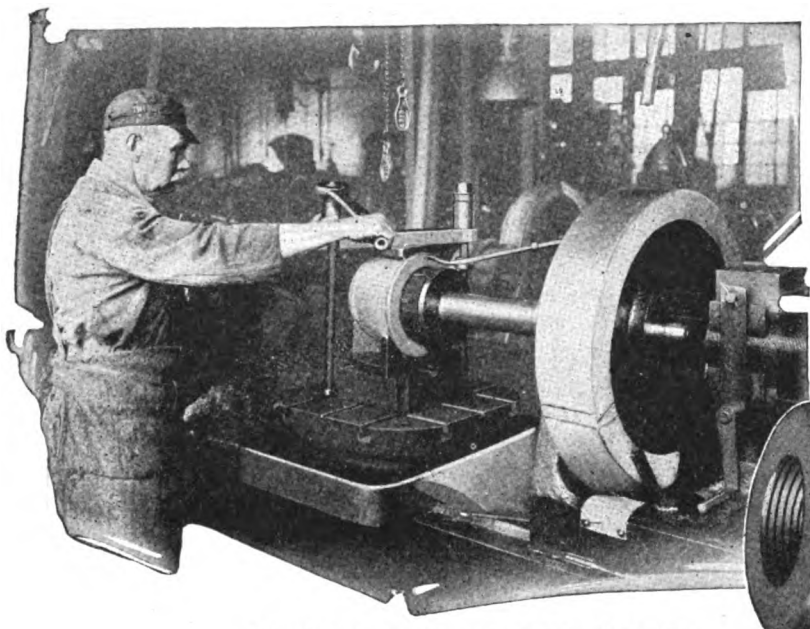
## Every Home Needs Some of These Tools

The day of useless gifts at Christmas time has passed. Most people choose articles of practical value for their presents.

And what is more valuable than a good saw or tool? With good tools any man can do practically all the repair work around his house.

Most home workers find a lot of fun in doing their own work, too—in sawing a tough, knotty board with a saw so keen and well balanced that it bites its way through with little effort.

Even driving home a screw gives pleasure, providing the screw driver has a handle that will not turn on itself or slip—one that fits the palm.



Disston advertising throughout the country is telling the home owner the advantages of owning the best tools. Such papers as The Saturday Evening Post, Popular Mechanics and the Farm Journal are reaching hundreds of thousands of homes. Link your arguments with these. The home owner wants the best for his home.

And this is a mighty good time to help him choose wisely—choose things that are useful and things that are the best in the line.

**HENRY DISSTON & SONS, Inc.**

*12-inch tapping machine used for tapping 12" to 8" tees, elbows and angle elbows.*

*The man in the photograph is tapping an 8" cast iron 45 degree angle elbow.*

*Look for the* **G** *on all cast iron fittings*

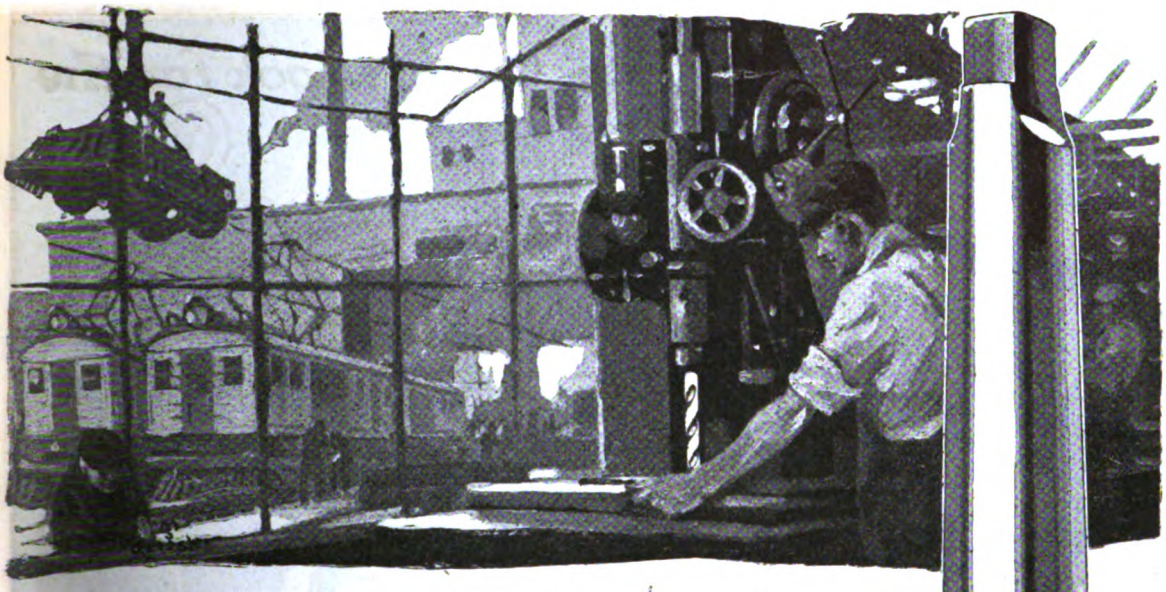
# "G" Fittings must be right!

Unlike most makers we are big users of our own pipe fittings. Fact is, that's why we started making fittings. We had to have fittings for our automatic sprinkler systems and other industrial piping equipments—fittings that were 100 per cent right. So we got busy making our own. "G" fittings are the result.

You'll find no "come backs" on these Grinnell Perfect Fittings.

Every single "G" fitting is twice inspected—once in the blank—once after threading.

Why not satisfy your customers with fittings made to meet our high standards?—Satisfied customers are the foundation of successful business.



In addition to fittings and valves we are prepared to cut and thread pipe to sketch.

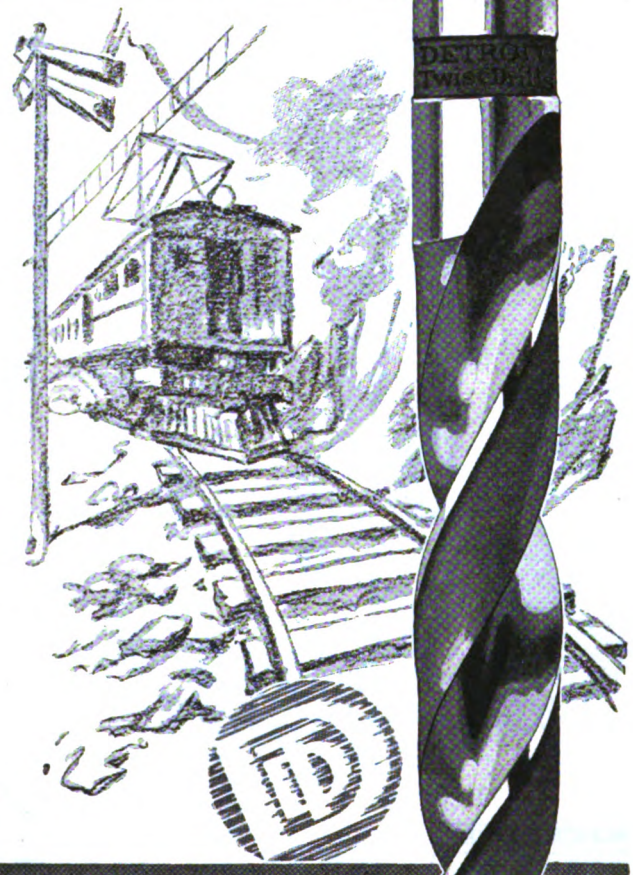
## Relation of Holes to Modern Marvel—The Electric Locomotive

A glance at the construction of an electric locomotive—the Z bars and the angle irons—the center channels and the cross-sills—and the steel plates which form its structure—and the gusset plates, the knee braces and the rivets which strengthen its construction—will reveal the myriad accurate holes required to assemble it.



It is interesting to know that the importance of accurate drill holes is emphasized not only in our modern units of transportation, but also in almost every utility that contributes to any great extent to the comforts of our daily life.

And the manufacturers of electric locomotives, which must be built staunchly to resist effectively the continuous stresses from coupling, use Detroit Twist Drills because these drills give more accurate holes with less regrinding and with less cost for power

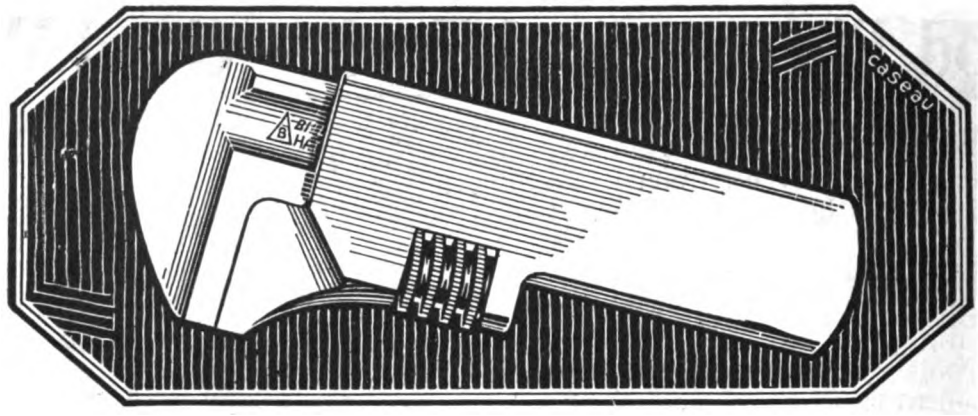
# Good Plans—Good Tools—Good Work

All three are essential parts of a satisfactory job. We emphasize "Good Tools" because they are our share—and yours. When a tool-fan comes into your store, watch his eye light up when you show him your line of Millers Falls Tools. Be he an amateur or seasoned workman, he recognizes evidences of good workmanship in Millers Falls Tools—carefully cut gears, well-polished wood and metal, the right balance of the whole tool.

Our series of advertisements in The Saturday Evening Post—two of them are reproduced here—are bringing home to craftsmen the **human** things about their drills and braces; their responsiveness; the way they help to gratify the instinctive desire to make things.

Emotion—the human interest in anything—is the real stimulus to action. It is stimulating Millers Falls sales — **your** sales, if you stock and display Millers Falls Tools.



"How to Sell Tools" is interesting reading. Ask us for a copy.

# For Christmas Hospitality, Mirro

Full worthy the steaming, fragrant beverage proffered the honored Christmas guest is this Mirro Aluminum Coffee Pot. It is bright and shining as a frosty Christmas morn. Coffee poured from its silvery depths takes on added temptingness.

Being of the Mirro family, it is durable, too, of course. All Mirro Aluminum is sturdily constructed. It will wear a lifetime.

And the Mirro features of convenience are unique. You do not find them in ordinary aluminum ware. Note, for instance, the features of this Mirro Aluminum Coffee Pot:

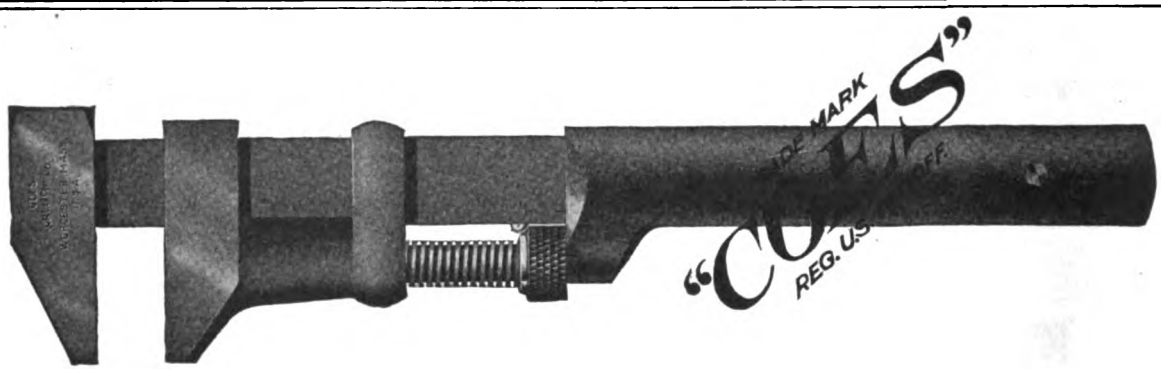
(1) The sure-grip, ebonized, detachable handle which insures comfortable handling and easy pouring. ☆(2) Handle sockets are welded on, as are also the spout (3), and the combination hinge and cover tipper ☆(4).

☆(5) The rivetless, no-burn, ebonized knob. This, with the other star features 2, 4 and 9, belongs exclusively to Mirro.

(6) Flame guard protects handle when the pot is on the stove. (7) The famous Mirro finish. (8) The rich Colonial design. ☆(9) The well-known Mirro trade-mark, stamped into the bottom of every Mirro utensil, and your guarantee of excellence throughout.

Remember, this trade-mark is a symbol of master-craftsmanship acquired through nearly thirty years' experience in the making of better aluminum ware.

Look for Mirro Aluminum everywhere at the leading stores.



Send for miniature catalog.

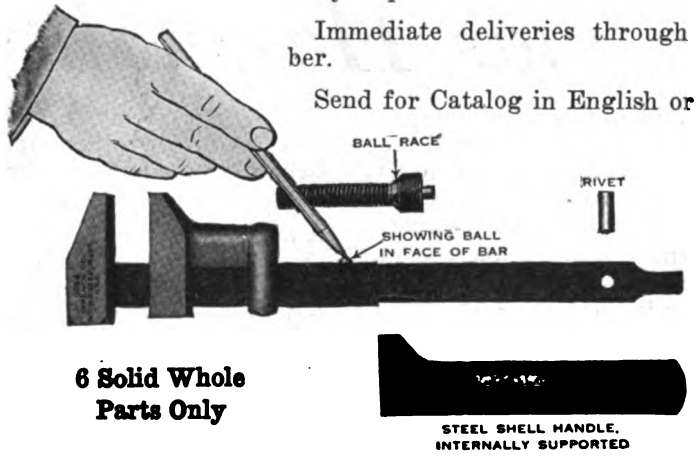
# MIRRO ALUMINUM
## Reflects Good Housekeeping

*The advertisement reproduced above will appear in the Christmas issues of the Ladies' Home Journal, Woman's Home Companion, Good Housekeeping, and McCall's Magazine—full page size in each.* More than five and a half million women read these magazines. They are [illegible] who hold the purse strings, and do the buying, for as many families. Naturally, they will be influenced in their purchases by Mirro advertising

# Sell This Wrench to Mechanics

Recommending the Proper Wrench for certain work is as important as selling the Right Key with a lock—neither will answer unless they fit.

It is therefore advisable to suggest that for difficult work in damp places, or where the tool will be exposed to heat, water or insects—a COES "STEEL-HANDLE" WRENCH will best answer all the requirements.



Remind mechanics that the COES "STEEL-HANDLE" Wrench is the simplest and strongest All-Steel Screw Wrench ever constructed.

This entire wrench is made with six solid whole parts only, as shown below.

These parts are put together in a manner which insures such rigidity and security that giving way or coming apart under severest working pressure is practically impossible.

Immediate deliveries through your Jobber.

Send for Catalog in English or Spanish.

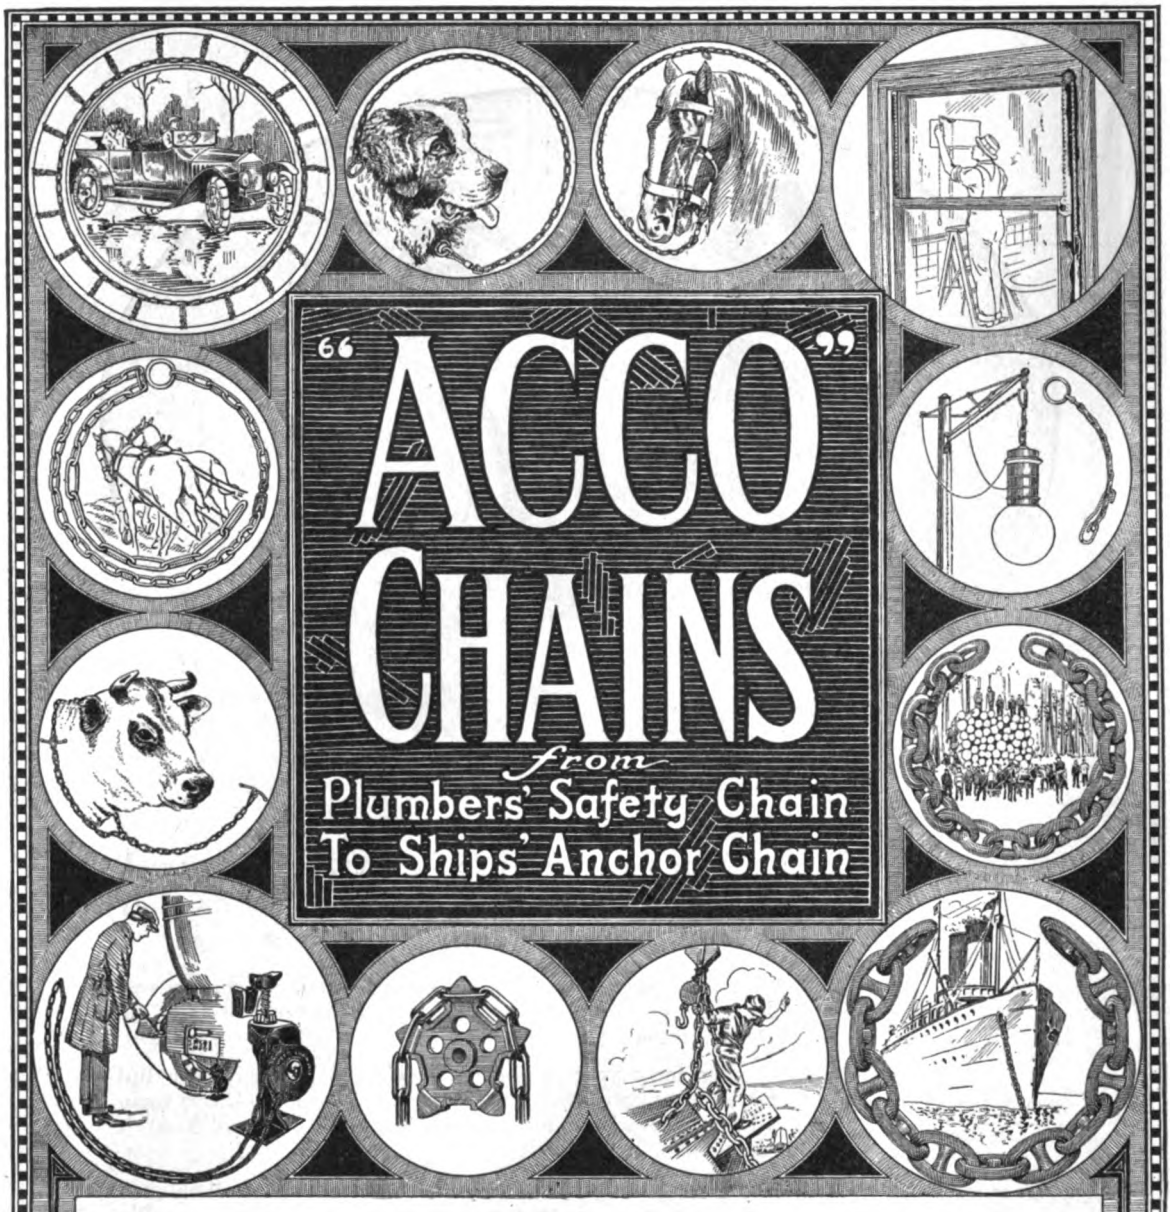
## You can measure 'most anything with Starrett Tools—except the satisfaction they give the men who buy them.

That's what counts in a sale—satisfaction. It brings buyers back to your store again and again, and changes "drop-ins" to steady customers.

For forty years, Starrett Tools have been giving a full measure of satisfaction. Machinists, toolmakers—every man who uses precision tools knows Starrett Tools and Starrett Hack Saws.

They never get a chance to forget them, for Starrett national advertising is a constant reminder. That's why there is a steadily increasing demand for Starrett Tools and Hack Saws. The business of Starrett dealers is always growing, because the Starrett service brings buyers right to their stores.



"The Tools Mechanics Buy" is full of good tips about winning friends through selling Starrett Tools, and it's snappy, interesting reading, besides. Write for free copies for yourself and your clerks.

# Putting High Powered Publicity Behind a Big Selling Opportunity

FROM the Atlantic to the Pacific, thousands of Mueller merchants in practically every state in the union are profiting, and profiting **big,** by an unparalleled selling opportunity.

High fuel costs and fuel scarcity have awakened people everywhere to a keen realization of the necessity of efficient heating systems.

And because the Mueller, the "Big 3," Pipeless Furnace, has proved its heating efficiency and big fuel saving under every test, it is the logical choice of thousands of home owners who are replacing antiquated, fuel-wasting stove heaters with this modern heating system.

Three big, exclusive construction features, the "Big 3," have definitely established Mueller superiority — have made it famous throughout the country.

Mueller advertising in big attention-compelling advertisements, is driving home these three vitally important features and giving the Mueller a supremacy which means greater sales and more profits to every merchant who handles the

# Just Step Inside the Factory

Here are some of the immense presses, in fact they are the largest ever made for this class of work. They stamp out the sheet steel parts for Nesco Perfect Oil Cook Stoves.

Further back are more larger presses and many smaller ones, also pipe cutting and forming machines and various electric welding machines. Many machines were specially designed and built up for

## NESCO PERFECT

## Oil Cook Stoves

just to make as near perfect as possible the particular part of the work assigned to them.

In a small space is a battery of eight presses with conveyors and chutes to carry parts from one press to another. Here are made the wonderful burner bowls. They are seamless of course. Precision is an essential; for example, the feed hole is placed within a small fraction of an inch, a final extra operation on the top makes the surface smooth and even all round so that the chimneys will properly seat. In fact, every operation has been studied out to a nicety and is kept exactly right.

That means a finished product that goes out to you and from you to a customer without any come back kicks.

Start now to place your order for your 1921 requirements. Today is none too early.

Ask your jobber for full particulars about Nesco Perfect Oil Cook Stoves.

# People are Going Into Winter Quarters

With the advent of Fall, people begin on those little odd jobs around the house preparatory to making themselves comfortable and secure for the winter.

This is the time to let your customers know that you carry Sargent Cylinder Day and Night Latches.

It is surprising, when you think of it, how a small article like a latch, when properly merchandised, will boost turnover.

Think of all the doors in your neighborhood which have insecure fastenings—not only those on dwellings, but store doors and apartment doors. Every one is a sale if you go after it.

For safety, security and strength, Sargent Cylinder Day and Night Latches have no equal. They have many special features, chief of which is the PUSH BUTTON STOP, found only in Sargent Day and Night Latches. They are simple, convenient and safe, and there is no possibility of their getting out of order by forcibly closing the door.

Make Sargent Day and Night Latches your standby. Keep them before your customers, and before your salesmen as well.

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

**People are getting more particular every day. If they find you can't supply just what they call for, they resent having a substitute offered. Especially is this true in the case of standard, well-known goods that have been acknowledged leaders for a generation or more.**

A reputation for giving the customer exactly what he asks for is one of the biggest business-building assets you can have.

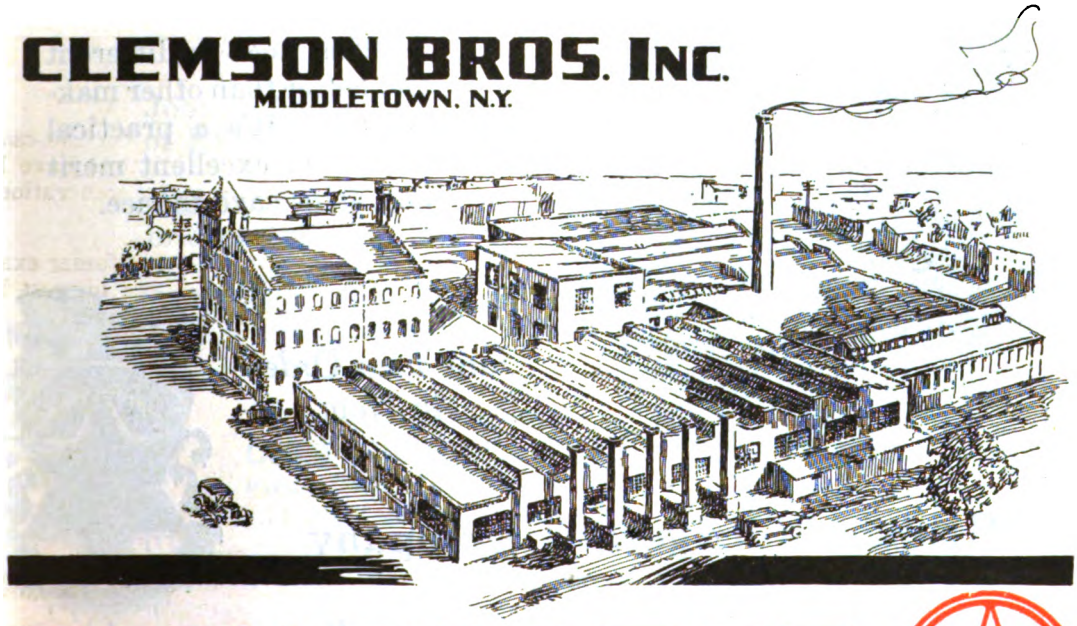
STAR HACK

Digitized by Google

# wouldn't take anything but Star Hack Saw Blades"

And the better known the standard merchandise you carry and the higher its quality, the stronger that appeal will be.

Few items in your whole stock are better known than Star Hack Saws, which have been the standard since 1883. In city or country, large store or small, these famous saws in the green box are often the only brand carried, so much higher are they in quality and so much more readily do they sell than any others made.



Now Star Hack Saws are sold by the factory that has made them since the beginning. And it goes without saying that the factory that makes an article is in the best position to tell you how it is made, how it should be used and how to sell it.

Our Sales Promotion Department is at your service to help you push Star Hack Saws with factories or individuals in every way possible.

And our national advertising on Star Hack Saws, which has made them known to users everywhere, will be continued in a bigger way than ever the coming year.

In ordering through jobbers be sure you get "Star." Inquiries or direct orders should be sent to this office.

# This Jams the Door Snug to the Door Jambs

**IT'S THE BALDWIN REFRIGERATOR LOCK**
**"BALDWIN" PATENT AND DESIGN**

It's the best Refrigerator Fastener made—squeezes the door tight to the refrigerator, and in combination with the rubber insertion which we put around "Baldwin doors," makes an absolutely tight joint.

Photograph shows the plain polished Nickel style, used on our "Snow White" Opalite Glass and "Sanitas" Porcelain lined and some other styles.

Made in Roman Gold finish, ornamental design for the more moderate priced goods.

This Lock is different and better than other makers use. It's a practical feature of excellent merit and helps save the ice.

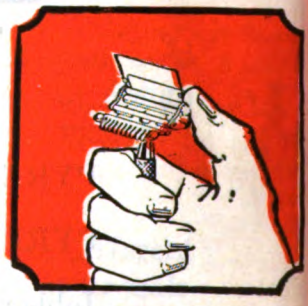
# 6 simple suggestions that many dealers are using to increase Christmas sales

***Modern Christmas shopping season a tremendous sales opportunity for dealers. A plan that works***

THE reason that the great American Christmas shopping season comes and goes before many dealers realize it, is because they do not look ahead far enough, plan the whole thing out—*and then carry out their plan.*



The Christmas season is by far the biggest retail event of the year. In many lines 25% of the entire year's business is done in these six weeks.

The big department stores know how to prepare for Christmas. They get themselves organized especially for it, down to the last cash-girl. Entire new departments are opened up, a whole army of extra people is trained, and windows are made especially interesting—everything from top to bottom is rearranged and reorganized—to make the most of the Christmas opportunity.

*Every* merchant, large or small, can apply the same principles to his own Christmas selling.

Here are six proven suggestions that can be put into effect right now:

***One***—Go over your stock and select those items that have the greatest gift-value. Concentrate on them. Announce your store in local newspapers, by mail and with store signs, as "The Gift Shop—something for everybody."

*AutoStrop Razors sell themselves when the salesman knows how to demonstrate them. Show the customer how the blade opens for cleaning like the leaf of a book—how the same lever that releases the blade also adjusts it for close, medium or light shaving*

***Two*** — Make your Christmas windows the talk of the town. Do them so well that the newspapers will speak about them. Make shoppers stop and look—it's the first step toward getting them into your store.

***Three*** — Women are the biggest Christmas buyers. See that your whole store particularly appeals to them.

***Four***—Christmas is the season for demonstrations. There are more people in your store to demonstrate to.

***Five*** — Mail circular letters or printed circulars to a selected list of customers and prospects—especially women.

***Six***—Don't forget the value of Christmas decoration. Use holly, Christmas bells, trimmed Christmas trees. There is genuine selling value in a Christmas atmosphere.

Digitized by Google

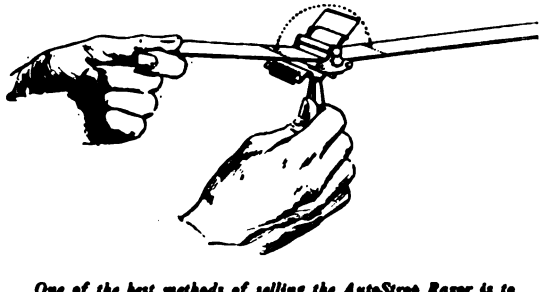
### *How to make the AutoStrop Razor a real part of your Christmas sales plan*

There is not an item in your entire store with greater gift possibilities than the AutoStrop Razor. Now is the time to push the De Luxe gift sets as Christmas presents. No matter what Christmas shoppers come into your store for, demonstrate the AutoStrop Razor—to men, to women, to boys.

### *The selling power of a real demonstration*

Show the customer how the AutoStrop Razor strops itself, how it is adjusted instantly for a light, medium or close shave, how easy it is to insert a new blade when a new blade is desired.

It was demonstrations like this that enabled a dealer out in Iowa to take in $6,000 in less than two years selling AutoStrop Razors.



A dealer in New Jersey has made his store known for miles as "Razor Headquarters." He offers an AutoStrop Razor free to anyone who can make the simple stropping mechanism cut or injure the strop while restoring the edge.

A dealer in Pennsylvania speeds up sales not only by demonstrating but by displaying together those articles that are used together. In his show windows he displays AutoStrop Razors, shaving brushes, soap, mugs, blades, even talcum and shaving lotions.

These are practical business-building ideas that have proved their worth with other dealers. They will help a lot toward making your store stand out in the community—toward giving it a personality that will attract customers and hold them.

Write for our merchandising plan and other dealer helps. We can help you to duplicate the successes you have just read about.

AUTOSTROP SAFETY RAZOR COMPANY
New York Toronto London Paris

*One of the best methods of selling the AutoStrop Razor is to get the customer himself to strop the razor on its own specially prepared strop. Let the customer slip the strop through the razor head—let him give the razor a few strokes on the strop—in short, let him see for himself how easy it is to have a "new" keen edge for every shave.*

# AutoStrop Razor
## —sharpens itself

*On razors, strops, blades, etc., hereafter manufactured by us we shall apply the trade mark "Valet" in addition to the trade mark "AutoStrop" as an additional indication that they are the genuine products of the AutoStrop Safety Razor Co., New York*

# UNIVERSAL

*"The Trade Mark known in Every Home"*

## Home Needs

## Out With the Old Stock In With the New

IT ISN'T NECESSARY to put dynamite under "Universal" Goods to move them. They never become members of the Old Settlers Fraternity. They are quick to move when their price is in sight. You know that. But sometimes "Universal" Home Needs that should be working in homes are loafing on store shelves. This is largely because they are not displayed. Often they are hidden by goods that are less attractive, less in demand and on which there is less profit.

If you have any "Universal" stock that seems to have forgotten its way out of your store, tidy it up and let it be seen by the holiday shoppers. You cannot go wrong by showing or selling anything with the "Universal" Trade-mark. Move every "Universal" article out of your store—that's the best way to make room for more.

"Universalize the Home." That's the big idea promoted in "Universal" advertising. It is helping dealers to put "Universal" goods into every home, everywhere.

# Which Way Do You Handle Nails?

MANY a Hardware man has his hands all "Scratched up" getting nails out of a keg—others have grown tired chasing to a bin and using a nail claw—wasting their own time and keeping customers waiting.

The quickest and easiest way to sell nails is with a scoop and an "ECLIPSE" Sectional Revolving Ball Bearing Nail Bin which is

**Used by More Than 9,000 Stores**

The "ECLIPSE" is built with individual revolving sections. Each section works independently of the others and revolves upon ball bearings. The slightest touch will turn any section, even when loaded to full capacity.

This strong all steel fixture holds from 15 to 25 kegs of nails (according to size), and occupies only 4 feet diameter floor space.

Each compartment holds better than a keg of nails, and saves both time and nails in waiting on customers.

The "ECLIPSE" is also a fixture that you will be proud to have in your store.

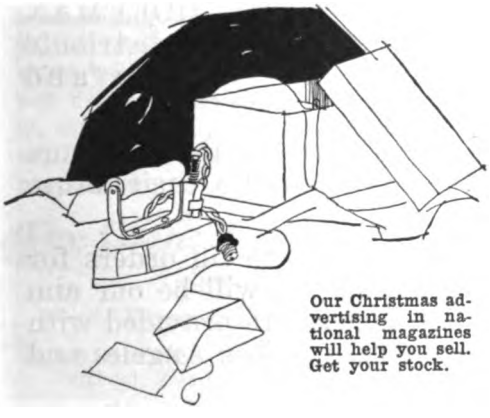
# Quick Sales—Small Investment

Be ready for two of the best sales propositions for every hardware dealer right now. National advertising will create increased demand for Domestic Electric Irons—Christmas business is profitable. Clark Heaters are good cold weather sellers. You'll do the business if you have the stock.

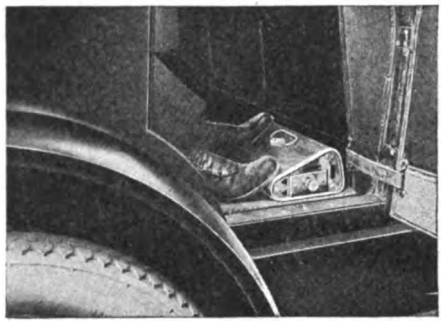
## DOMESTIC ELECTRIC IRON



The electric iron that keeps in serviceable condition is what every dealer wants. The Domestic meets every requirement. Well constructed of the finest material—it is made for work.

Add to your reputation for handling quality products by recommending the Domestic to your trade. The Domestic soon sells itself—it has the name of delivering long, efficient service.

Build holiday trade with the Domestic in Christmas gift box—no extra charge.

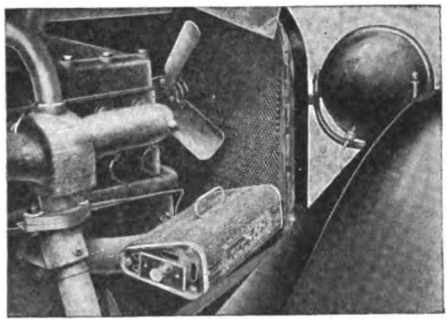


Send for display cards, folders and electros—all furnished free.

Order from your jobber, or from us. In cases of six—two cases make shipping weight.

Our Christmas advertising in national magazines will help you sell. Get your stock.

## CLARK DOUBLE PURPOSE HEATER



In the Car to Keep Passengers Warm

### Double Use Means More Sales

The efficient, economical Clark Heater is well known for its comfort in cold weather driving. The autoist will find additional service in the elimination of cold weather starting troubles. Take heater from car and place under the hood on opposite side of engine from carburetor, when car is standing in garage or street. No waste of oil or gas in "warming up."

Increase your sales on heaters this season by telling your customers about this additional use. Order now from your jobber and be ready for the first cold days.

# A Razor That Shaves

# HIM

*There Is a Genco Razor for Every Kind of Beard and Skin*

MEN have learned from experience that the same kind of razor or razor blade will not shave every beard and leave the face cool and comfortable.

They know that a man with rugged skin requires an entirely different razor from the man with tender skin.

There used to be a lot of guesswork in razor buying and selling. Securing the proper razor was considered more or less a matter of luck. Customers were often dissatisfied when the razor they bought would not shave them with comfort. They blamed the dealer.

Now razor buying and selling has changed. Dealers carry the GENCO LINE and are in a position to sell more than razors. They can assure each customer that he is to secure satisfactory shaving service.

And the Dealer is backed by the Maker's Guarantee:

## "Genco Razors Must Make Good or We Will"

Handsome Genco Display Cabinets are supplied with assortments of Genco Razors in which are included a wide variety of styles and sizes—*"a razor for every kind of beard and skin."*

A brief but thorough clerks' selling chart is packed with each cabinet to assist the clerk in selling each customer *"the razor that will shave him."*

**Order a Genco Assortment today.**

Good Housekeeping — Farm Journal

*The fall page advertisement here reproduced will appear in October Ladies' Home Journal*

OUR policy of active co-operation with Simplex Ironer dealers in promoting the sale of these reliable, pioneer ironers, is extremely liberal. We use care and discrimination in the selection of dealers and then back them "to the limit" in realizing real profits.

The gigantic Simplex National Advertising Campaign, never ceasing, is establishing consumer preference for the Simplex that prompts easily-made sales to satisfied customers.

Write for particulars. Our plan of Dealer's Co-operation builds business for the entire Household Appliance Department.

# The Tire With the Really Scientific Tread

For years motorists have been seeking a tire which would really give greater mileage. Gates Super Tread Tires are constructed on entirely new scientific principles. The tread is so broad that the proper road contact is gained with less bending of the sidewalls, and the road wear is distributed over a greater surface. This means longer wear for the tire. It is easy to demonstrate to motorists why the Super Tread Tires will give longer service.

## Gates Tubes Are Built for Greater Service

Motorists are demanding greater service from tubes—the kind of service that Gates Tested Tubes give. These tubes are guaranteed 800% stretch, which means greater toughness and longer wear. The Red Tested Tubes are cured with antimony, which insures against deterioration and bloom. Their thick, even walls and reinforced valve base insure longer life and freedom from blowouts.

# FACTS
## Worth Remembering

In ordering Window or Fly Screen Cloth from your Jobber don't forget these vital facts:

The amount of **service** and **satisfaction** your customers get out of Screen Cloth depends almost entirely upon the materials used and the methods employed in the making. The label which identifies every roll of the "Perfect" Screen Cloth is your guarantee of the best materials, accurate mesh, the proper width and a full 100 lineal feet to every roll.

That's why dealers buy all of our wire products, Screen Cloth, Hardware Cloth, Poultry Netting, Fly Traps, etc.

## The Only Screw Holes in the World

### The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

# Kleen-a-Pipe in Two Minutes

Demanded by every housewife because it works instantly. No mixing. No delay. Just shake the fine powder into the drain pipe and turn on the faucet.

Removes wood, paper, cloth, grease, etc., without fear of injury to the plumbing.

Don't call the plumber. Keep a handy can ready for instant use. Positively prevents stoppage if used frequently. It cleans, protects and disinfects.

**Your jobber sells Kleen-a-Pipe. Home size cans, $1.00. Packed 2 dozen to the case, $14.40. Drop shipments in 5 case lots, $13.40 each. Freight prepaid.**

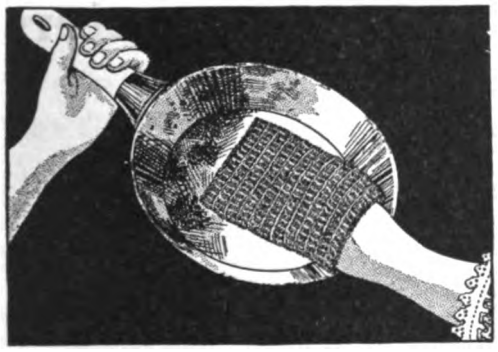
# Another Big Help for Duplex Dealers

A new dealer's help that really helps. The Duplex Dealer's Bulletin—a publication devoted entirely to dealers' problems, will be sent you shortly.

Just a few tips on what you are going to get—a good sales letter each month to be sent out to your prospects—suggestions for your store advertising—window displays—in fact, every sort of help we can give you to increase not only the sales of Duplex Fireless Stoves but of all your lines of merchandise.

Duplex national advertising is opening the way to increased sales. The Bulletin will show you how to close them.



If you are not a Duplex Dealer—write today for our new dealer's proposition, and tell us to put you on the mailing list for the Bulletin.

# A MARVELOUS WORLD'S RECORD

## With Peters Cartridges

### THE FIRST 15 SHOT POSSIBLE

For the first time in the history of the United States Revolver Association a 15 shot possible has been made. This World's Record was made by T. K. Lee in Match 32 of the recent U. S. R. A. Indoor Team Matches.

But this is only one of the records that he established in this series of matches; he also made **record average** for 33 matches—143—636—25 possible scores of 50—next highest competitor making only 6. Ran 24 consecutive 10's.

Mr. Lee used Peters .44 S. & W. Special Mid-Range Wad Cutter Cartridges.

None of these records have ever been equalled by any other ammunition, and all are records by a wide margin.

# *A Good Rope—*
# *Seaport Manila*

P
Trade Mark

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

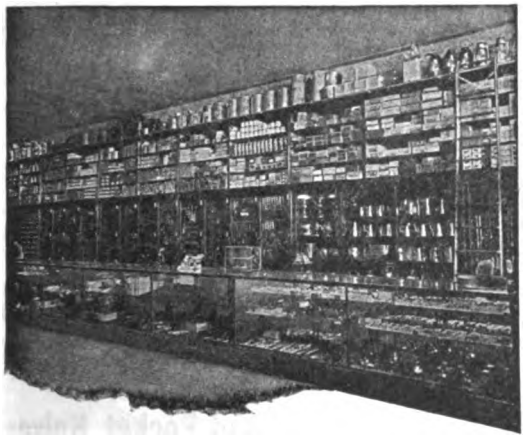
# SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire Preventing

Home Protecting



Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.
Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.
Send for Price List and Descriptive Statement.

# What's In a Name

Enough—plenty — SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore. Brunswick Balke (Pool Table Mfgrs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. **HERE AND NOW.**

"On and above the fact that **GEM BRUSHES** possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name **G-E-M**, connected with shaving things particularly, spells **SUCCESS** from every stand-point necessary and essential. **GEM BRUSHES** represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is **BUYING POWER**, they will ride forth with confidence of our trade to reach all points which is **ULTIMATE CONSUMER** via stations called **DEALERS**, through the transfer points called **JOBBERS**. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because **GEM** exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in **GEM BRUSHES**.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. **GEM BRUSHES** not only will sell on account of name, but, be backed up in use with real quality and service.

**GEM BRUSHES** will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that **GEM BRUSHES** are in a class alone, **GEM BRUSHES** are manufactured to sell no cheaper than good brushes can be produced.

**GEM BRUSHES** is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results **GEM BRUSHES**.

(Signed) THE GEM SAFETY RAZOR CORPORATION.

# PILOT BRAND

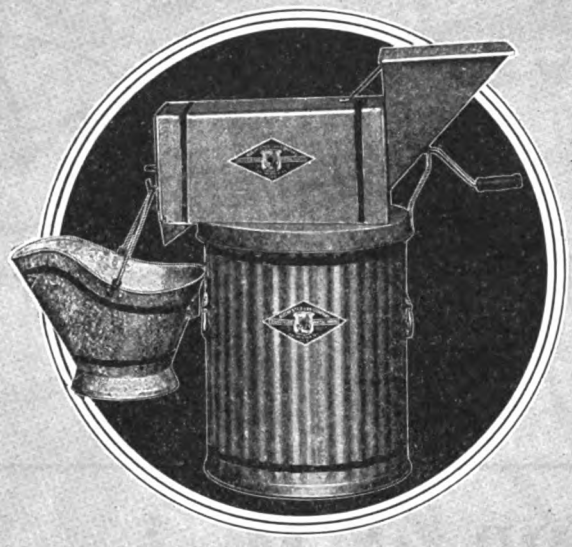
# What's Missing On This Hack Saw Frame?

There's one thing missing on this LOW-PRICED Hack Saw Frame—and it's the one thing that is missing even on HIGH PRICED Frames of this type.

It's the wing nut that's missing. You, as a dealer, know that the saw on a cheap frame is adjusted by a wing nut. Only in the high-priced frames of this type is the saw tightened by turning the handle—with one exception, the Pilot Brand.

**PILOT HACK SAW FRAMES ARE THE ONLY POPULAR-PRICED FRAMES ON THE MARKET WITH THE HANDLE ADJUSTMENT FEATURE!**

As a dealer you have only to ask any mechanic who comes into your store which he prefers, a hack saw frame whose blade is adjusted by a turn of the handle or by a wing nut, both frames selling at about the same price. You will then know why it is so easy to sell Pilot Handle Adjustment Hack Saw Frames in competition with the old type with the wing nut adjustment.



Ask your jobber for prices—or, better still, send your jobber an order today.

# What About Those Five Minutes?

NOT minute-men.

But last minute chaps.

Who use their "Big Ben" only to make sleep seem sweeter.

Roll out of the wrong side of the bed, give the cold bath the absent treatment, substitute a gulp of coffee for a nourishing breakfast and instead of an invigorating morning walk, run after the trolley car with half their clothes struggling to get aboard their bodies.

See them rushing around the corner panting for breath and at the same time panting for an alibi that will get by the boss. Even attempting to give the time clock mental treatment so that it will register five minutes earlier than its face announces.

"Oh, why be fussy about a few minutes in the morning? I do my work whether I come in early or late. What could I do in five minutes in the morning anyway?"

Well, if Napoleon could have had five minutes at Waterloo probably he would have conquered Europe. Many a business deal has fallen through just because of five minutes. There aren't such an awful lot of five minute periods in a whole day.

But really, it's the principle of the thing that's most important. I've seen more splendid fellows on the way to be executives turn and go the other way because of their lack of punctuality than I could count on more fingers and toes than nature gave me.

If you want to make a practice of always arriving at the store exactly five minutes late and can get away with it—stick to it and be punctual in your unpunctuality.

But since the man for whom you work has set a certain time for your arrival and since you by accepting a job on those terms have virtually made a contract to be there at that time—stick to that.

Dame Opportunity is said to knock but once at any man's door. A good deal of her knocking, I've found, is done during the hours we're supposed to be in a place—and are not.

Some day something is going to happen in that first five minutes that could change your whole career for the better.

## UNDERSTANDING THE WOMAN BUYER

The distinctive difference in the appeal to men and to women is expressed accurately in the following sale of two hats:

Seen in a millinery establishment: A woman was undecided which one of three hats before her she would select. The saleswoman tactfully said, "Madame, this one is especially becoming to you and as it is an exclusive model you will not find a duplicate of it in the city." She hesitated not a moment—the hat was hers.

Seen and heard in a men's furnishing store: A large man, apparently of means, was deciding which one of the many of the present season's styles looked the least freakish on him. The salesman tactfully suggested that one particular style would be adopted and worn by the most men in the city. The man gratefully accepted this hat.

Mr. Hardware Dealer, do you recognize this vast difference that exists and use it when determining the kind of publicity needed?

Women can be divided into two groups—bargain hunters and women who desire nothing but the best.

Women's second nature is to shop around. She may definitely have made up her mind what she wants and where she is going to purchase it. But that place is usually the last on her list. She customarily makes an exhaustive investigation of what the market offers in the way of competition, so she can sigh and say:

"Oh, well, there really isn't another thing in the town I would have."

There are not a hundred women today who go direct to the store and lay down their money on the counter in exchange for a desired product. This is not so much because of the instinct of bargain hunting as the satisfaction and confidence in knowing there is nothing better to be found.

The human element is necessary, for without it you do not gain the attention of the women. So it is with everything in her life. In politics she cares little or nothing about the platform of the nominee, but if one man promises better schools for Johnny or Mary, shows he has an understanding and a heart for orphans or any other worthy cause, do you think she would stop to think whether he were Democratic, Republican or Socialist? No—she is voting for the man.

So it is in selling campaigns—she is interested in advantages that better home and family conditions. You can count upon her attention when you advocate—

Service
Beauty
Comfort
Efficiency in Home
Better Management

and short-cuts to housekeeping. Forget the dollar mark and the women will not forget you.

## SELLING A RANGE ON THE MAIL ORDER PLAN

Editor HARDWARE WORLD:

One day last week I tried to sell one of my customers a range on the mail order plan. I showed him a perfectly good photo and a full description of it. I gave him the names of several who had tried the range and were well pleased with it, and in addition to all this, told him that I would give him my personal guarantee that it would be satisfactory, and if not, he would be under no obligation whatever to take it.

He seemed very much pleased with the description and the price and was ready to close the deal, when I suggested that he pay me for the range, and I would order it at once. To my utter astonishment, he became very indignant at me suggesting such a thing, and very bluntly said, "What do you take me for; do you think that I would be fool enough to pay for an article before I get it?"

He then asked me if I didn't think he was good for his obligations and remarked that he had traded with me for ten years and had owed me as much as two hundred dollars at a time, and had always paid me. He said I had questioned his honor. All this time I was trying to explain that I was selling him the range at a very small profit, much smaller than I could if I carried it in stock. He didn't seem to hear a word I said. Finally he walked out of my store, saying that he was done with me forever, and that I would never get another dollar of his trade.

I lost his friendship of many years' standing and his trade, because I wanted him to deal with me, his friend, the same as he had been dealing with the mail order houses. But he wouldn't do it, he wouldn't trust me as he would them, and they rank strangers. I found out later that he ordered a range from a mail order house, sent them a money order for the full amount, and is now waiting their pleasure to send him the range when they get ready, or write him that they are temporarily out of that particular kind, and suggest he select another, and at the same time using his money until the transaction is closed.

Why is it some people have more confidence in strangers than they have in their friends and their neighbors, who have always accommodated them every opportunity?

Yours truly,
HAMP WILLIAMS.

---

A tactful clerk, who takes a real interest in folk, and who splices folk and goods together as a sailor would splice a rope, shows to the best advantage against a "good" hardware background. It needs a warm, sunny personality to move cold goods.

# How Salesmanship Is "Born"

HOW often you hear the remark made about some go-getting chap that he is a "born salesman." It generally means that the fellow seems automatically to have the knack of disposing of his goods to other people, in exchange for their money, and has distinguished himself along that line to such an extent that good old time humanity immediately jumps at the idea that such ability must be "born" in him.

Simply another evidence of the prevailing belief in that infamous old time law of limitation that has done so much to retard the development of efficiency in the human race. If the "other fellow" who witnessed the success and efficiency of this "born salesman," would grasp the true thought and idea that should come from such an example it would be an inspiration to him to do likewise, instead of furnishing him with a depressing thought—that he could not emulate the example because the other fellow got his from Providence.

Because the fact of the matter is that nine hundred and ninety-nine times out of every thousand, that "born salesman" is personally responsible and deserves personal credit for what he is and for what he can do. It isn't heredity that helps him to "bring home the bacon"—it's determination; it isn't luck—it's pluck; it isn't magnetism, or hypnotism, or mesmerism, or any other "ism" that helps him to deliver the goods; it's a good old contagious enthusiasm and pep and punch and optimism and common sense. And that bundle of assets has this "born" stuff backed off the boards, and don't you doubt it for a minute.

And there is nothing on earth that makes a thinking man so all-fired mad as to see some fine example of what brains and courage and enthusiasm and punch will do for a man, and then have the short-visioned folks look at him in wonder, and declare that he was "born that way."

The man who is successful in disposing of the commodities he has for sale in an unusually effective way, is a salesman; and so is the preacher who puts his line across with his congregation; and the lady who succeeds in convincing her social whirl of her particular high qualifications.

Every human being has something to sell, whether it is man or woman, boy or girl, child or grown up. As we make our way through life we are constantly engaged in the game of "selling something" to the rest of the world, and therefore the fundamentals of salesmanship are in reality of interest to all of us. We are all trying to "sell ourselves" to those with whom we come in contact, in the best possible way. We want the "other fellow" to appreciate our best points, to grasp the best possible opinion of us.

Therefore, it is worth while for all humans to understand that salesmanship of the more successful order, is seldom the result of a kindly heritage. Salesmanship may be "born," but it is born of honesty, dependability, ambition, vision, courage, enthusiasm, energy, punch, and sticktoitiveness.

And all of us, who have the desire, can fall heir to that splendid heritage.

---

Die when I may, I want it said of me by those who knew me best, that I always plucked a thistle and planted a flower when I thought a flower would grow.

—Abraham Lincoln.

Organization is the art of getting men to respond like thoroughbreds. When you cluck to a thoroughbred he gives you all the speed and strength of heart and sinew he has in him. When you cluck to a jackass he kicks.

Digitized by Google

# Blisters and Callouses

**Troubles Are the Blisters of Life, Callouses Another Name for Ripe Experience**

(By Harry G. Nye)

If there is one thing more than another for which a man ought to thank the Lord, it is that once he had the opportunity to be a boy, and an American boy at that. A man may envy a king upon a throne, or a millionaire with his money, or some other more or less lucky or successful bird.

But a boy has no reason to envy anybody. Except for parental authority, which doesn't seem to bother an American boy very much, he is a king himself; and a boy can have a lot of fun on very little money, so the millionaire has little on him.

When a man grows up, and achieves what his neighbors call success, he has a sneaking idea, which in time becomes a fixed conviction, that the only time he was ever a real success was when he was a kid. Those were the days! Those were the days when he had the nerve to stand up and fight for his rights and to avenge his wrongs. Those were the days when nothing looked too large to attempt. And those were the days when the world seemed made for us, and not we for the world.

And a fellow has to be considerable of a fellow to be a success as a boy. We yaps who groan about the competition of business have a snap compared with holding your own with the neighborhood gang. If a boy is a baby they will run over him, and if he is a bully, they will hate him. But if he is normal, never seeking or evading a scrap, ready to do his share, and to take it, he will be a prominent and respected citizen of Boyville, will get his share of amusements and marbles, and will lead a generally satisfactory life.

### Remember Boyhood Lessons

Recalling and realizing these simple principles of boyhood success, I wonder why they couldn't be applied to the conduct of man life? There is many a moral lesson concealed in what fond parents may consider a most immoral scrap, and much philosophy in a stubbed toe. A boy learns to take bumps and bruises as a necessary part of boytime adventure; but many a man gets his bumps and bruises in business and thinks he is especially accursed.

If I learned anything in connection with the blessed privilege of being a boy, it had to do with blisters. I was always having blisters. It seemed that I paid for every joy with a blister somewhere. If I chopped down the saplings to make a shanty, there were blisters on my hands. If I slid down a cellar door, more blisters. And every new pair of shoes was paid for with blistered heels. I found that if you wanted to have fun, you had to go ahead and not mind the blisters.

But I made another great discovery; that you seldom have many blisters in the same place. For, if you blister a spot often enough and painfully enough, in time it becomes a callous. And you could slide around the world on a callous without hurting your hide. I came in time to see that, while blisters are the necessary and inevitable accompaniment of pleasures, they are also the stepping stones to callouses and immunity from blisters in the future.

### Callouses Honestly Earned

If a boy received his callouses direct, without the blisters first, he hardly would appreciate them. But, having honorably earned them, via the blistered heel and hand, he realizes their value and cherishes them accordingly. Did you ever see a boy who wasn't proud of his callouses? They are the marks of a long and honored line of blisters fairly earned and endured. A baby never has blisters; it takes a real boy to have real blisters and to have them in such quantity that they ultimately blossom into callouses.

Troubles are the blisters of life, and callouses but another name for ripe experience. He who is irritated by blisters keeps them irritated and never achieves a philosophy that becomes a mental callous to protect him from the little calamities of the future.

When a man breaks faith with you the first time, you are surprised and pained; but when many men have done it, as many men inevitably will, you will develop a special callous to keep it from hurting, and a special caution to keep it from happening.

It is the muscle that is exercised that grows, and the sorer it is at night, the stronger it is in the morning. Men do not get bigger by luck, but bigger by overcoming hard luck. A blister may be a blessing that will save us from a wound some other time.

So be a boy; take the blisters of business as a boy takes the bumps of boyhood, firmly believing that they are hardening you for the hurts of life.

# The Power of Suggestion

**You Can Profit by These Sales Suggestions in Either a Small Town or a Large City. Human Nature the Same in Every Locality.**

"Most of these trade journals make me tired," exclaimed Joe Carson, as he cast aside the magazine he had been reading. "They are full of stuff about the big stores in large cities, and you very seldom read about what happens in the small town stores. Why is it, Harry?"

Harry Wilson, a genial traveling salesman, smiled at the question of his friend, the store salesman. After lunching together, Joe had sought to spend the rest of his hour in reading a trade journal; but he gave up in disgust and appealed to Wilson.

### Human Nature the Same in Small Towns

"You're wrong, Joe," Wilson was pleased to see the interest which his young friend showed in such matters. You seem to think like many other fellows that what is true in some stores is not true in others. But you must remember that human nature is pretty much alike all over the country, and what appeals to people in one locality is just as likely to make a hit elsewhere.

"That is why you often read of the big stores. They are up on their toes to keep abreast with competition and naturally their methods of business prove interesting. The small town store can carry out the same plans by slight alterations or by twisting them to meet local conditions. Hence the results will be in proportion to the amount of effort expended along these lines. And you obtain these ideas by reading about what other stores have done."

The conversation was interrupted by the entrance of a customer.

"I want a pocket knife," said the man, as Joe advanced to meet him.

He looked at several different kinds and departed soon after with a two-bladed knife of the cheaper variety.

"How did it happen?" asked Wilson, a moment later.

"What, was there something wrong with that sale?" Joe became interested.

"Yes," replied the traveling man, "you didn't sell that man what he should have bought. You let him go with a knife of doubtful quality, and in the end it will probably prove dissatisfactory."

"But he wanted it," persisted Joe.

"Of course, it is natural for anyone to select an article because of its price. But when that item fails to give satisfaction the customer seldom remembers what he paid; instead he blames the store for selling him something worthless.

### Don't Try to Force Your Views, but Lead Your Customer's Thoughts

"That is where the salesman must step in. He should see that quality receives recognition in every transaction. Yet it must not appear that you are trying to thrust a certain thing upon the buyer against his wishes. Try to lead his thoughts around to the point where he sees for himself that what you have suggested is best. Never try to force your opinion; it immediately causes antagonism. But by using suggestion in a tactful way many customers will accept your opinion because you let them convince themselves.

"In the deal you just made with this man you allowed him to control the transaction from the very start. I do not know him, but I judged him to be a man of reasonable means."

"Yes," agreed Joe, "Mr. Walton has money."

"That is but another reason why he should have bought a better knife, Joe. A man in his position will seldom quibble over a slight difference in price. Such customers are willing to get the most for their money. And you know the best is always to be preferred, because quality overshadows the price.

"Now when Mr. Walton asked for a knife you allowed him to make his own selection and naturally he was actuated by the prices. But suppose you had taken one of the highest grade knives from the case and showed it to him at the same time you lead his thoughts away from price. He would have failed to consider a cheaper article, at least not immediately, and in the meantime you could talk on the superior points of the knife you displayed.

### Knife Selling Suggestions

"After you explain that the knife you suggest has drop forged blades, pure stag handles and brass lining, besides it bears a trade-mark of national reputation and is fully guaranteed, I'm sure he would never consider the price, because you appeal to his sense of judgment instead of allowing price to be the controlling factor.

When a person sees why a thing is better, he will buy more readily than if he cannot see any difference between articles of the same kind.

"The average man considers a knife as a knife and seldom stops to learn if there is a difference. But a store salesman should make it a point to explain matters for the benefit of the buyer.

### Opportune Time to Make Suggestions

"As it happened the man chose for himself and after he made his selection it would have been hard to change his desire. So the proper

Digitized by Google

time to use the power of suggestion is before the customer has time to exercise his right of selection.

"You see, it is easy enough to sell down the scale of quality, and it is hard to go up. But if you start with the highest, you run a good chance of making a sale; or if you fail to sell the best you can always come down to meet the demands of anyone.

"The idea is to suggest without attemping to force a sale, and at the same time let the points of superiority predominate in your talk. When the buyer sees your point through his own eyes, desire on his part will supersede his former thoughts of the price. In such a way Mr. Walton could have bought a better knife. And it would have increased the amount of your sale as well as insuring satisfaction for the customer. But in the future when the cheap knife fails, Mr. Walton will probably remember the store and judge all your knives accordingly. With this unjust opinion he will go elsewhere for his next cutlery purchase.

"This idea of suggestion can be carried further. With the knife you could suggest a leather case or a pocket stone. Then the cash register would show an amount almost double the original purchase."

"You're right, Harry," confessed Joe. "I've tried that plan in selling razors, and now I hardly ever sell one without including a brush or sometimes a shaving stick."

"That's it, Joe. But don't forget to mention a hone or a razor strop. The man who reaches home and finds that a thoughtful clerk has filled his wants completely will be more than grateful. Such a pleasant situation can more readily be accomplished through the power of suggestion, don't you think?"

"I sure do," smiled Joe.

## THE MAN WHO FAILS

The man who fails is the sort of a chap
Who is always looking around for a snap;
Who neglects his work to regard the clock;
Who never misses a chance to knock.

He is grouchy and slow when work begins;
When it's time to quit, he jokes and grins.
He's always busy as busy can be
When he thinks the boss is around to see.

He believes that a "pull" is the only way
By which he can ever draw bigger pay;
And he sulks and growls when he sees his plan
Upset by the "push" of another man.

He's on the job when he draws his pay;
That done, he soldiers his time away;
While the men who tackle their jobs with vim,
Keep pushing and climbing ahead of him.

For the man who fails has himself to blame,
If he wastes his chances and misses his aim;
He'd win, if he'd use his hand and wits;
The man who fails is the man who quits.

## DO THE NEXT THING NEXT

"Do the next thing next." That little motto hangs on the office wall of a prominent business man—a man noted for his firm grasp of large affairs, and he declares it his charm against failure.

Most of us ordinary mortals are too prone to consider how busy we are and to lament. "The day is too short to get all my work done." After that remark, we stand around and consider how abused we are as time flies, and tasks are still unperformed.

Of course, under such conditions, one can accomplish nothing. But "do the next thing next" without waiting to consider the relative merits of entering yesterday's sales slips and rearranging the show case. One or the other should come first. Decide which and then get busy. Use system.

The next thing next—a simple rule to follow and one that works out consistently. Two days are never alike. As matters come up for consideration, give it. Clear away one task before commencing the next. A customer is looking for attention. Wait on him. A salesman wants to show his line before traintime. Take a moment to see him. His train will not wait and the little courtesy of prompt action creates goodwill that may result in money making suggestions later, for traveling men are in touch with the pulse of business.

One thing at a time and that thoroughly done is the secret of keeping up-to-date. The confusion incident to some stores we have seen is due not to lack of equipment but to lack of foresight in arranging work and carrying out the schedule. Putting too many irons in the fire is a common failing. Something is sure to scorch and then frantic efforts are necessary to retrieve the damage.

Confusion breeds nervousness, worry and aimless bustle. "The more haste the less speed" was never truer than now when records become more necessary and more complicated every day. Details must be attended to. One at a time they are not formidable, but piled up from day to day, waiting for attention, they become like the fabled rock and whirlpool, Scylla and Charybdis, luring navigators to destruction. The poor merchant is sucked by the current of uncompleted tasks into the whirlpool of failure.

There is one remedy for this. "Do the next thing next." Never mind what someone else does. Keep the clear brain and steady judgment that only comes through consciousness of work well done.

"A wise old owl sat on an oak,
The more he saw the less he spoke,
The less he spoke the more he heard,
Why can't we be like that wise old bird?"

# Increasing Your Trade in Hunters' Lines

With the clear, crisp autumn days comes the desire to get out with dog and gun and tramp across the fields in search of game. Whether going out for a single day's sport, or a week's trip into the wilderness, many articles of accoutrement will be needed, and it is up to the hardware man, in the majority of towns, at least, to furnish them.

A good line of firearms will probably sell themselves, but there are a hundred and one accessories whose sale can be doubled and trebled by calling their convenience to the attention of the sportsman.

**Man in Charge Should Really Know**

The very best way to sell hunting goods is to put the sporting line in charge of someone who is genuinely interested in sports himself. Such a man will naturally have the very best equipment, and when showing any novelty to a customer will be in a position to say, "I have used it myself with good results," the most convincing argument that can be used.

Carl Klindt, sporting goods merchant, who really knows

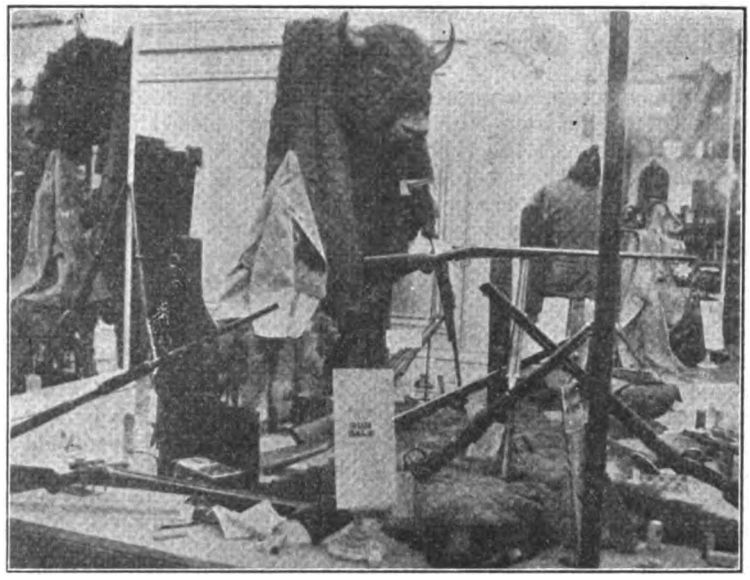
This is the method adopted by the San Diego Cycle and Arms Co., whose hunting line is in charge of Carl Klindt, an enthusiastic sportsman, and the leading spirit in everything that pertains to clean sport in San Diego county. In the early fall much of his time is spent in engineering duck drives in the leadership of which he has gained local renown. In talking of the sport recently, he said:

**A California Method**

"Duck driving is a sport that had its origin in California, and to the best of my knowledge is not practiced to any extent elsewhere. Yet it is entirely within the law, and its operation is simplicity itself. A lake of moderate size, an abundance of ducks, and a flotilla of row boats manned by a crew of eager hunters is all that is required. The boats are drawn up in a line that stretches across the pond. In the center of the line is the drive boss, whose orders are to be obeyed. The boats are slowly rowed across the pond and as the line advances the ducks take to the air. As they pass overhead the bombardment commences. If there is an abundance of game it is a good plan to have several boats behind the line solely to pick up the game. After the hunt is completed the birds are gathered into one pile, and prorated among the hunters."

But while enjoying the sport, Mr. Klindt does not overlook the practical side—which is to sell all the equipment possible. Accordingly for several weeks prior to the drive he called it to the attention of hunters through the newspapers and windows. A recent ad, adorned with a flock of flying ducks, queried:

> GOING DUCK HUNTING?
>
> Have you everything you require in the way of ammunition, clothing, cooking equipment and accessories?
>
> Have a look at our fine Hunting Window.
>
> Undoubtedly you will see therein something you have forgotten.



The window they mentioned fully bore out their statement. Boxes of varying heights were placed in the background, on the top of which were laid khaki suits, jackets, leggins and puttees. Back of the boxes were big branches, through which could be seen the life-size cut-out of a hunting dog. The central portion of the floor was surrounded by a wire netting, and here, in an improvised pond, were half a dozen live ducks.

The floor at either end was covered with shells, cartridges, hunting caps, knives, hatchets, flash lights, thermos bottles, and other hunting line accessories. On the wall was hung a large clock-shaped card, to which, instead of numerals, was appliqued small, gayly colored birds and animals, while in the center was lettered:

"Now is the time to go hunting."

Another firm that has given much attention to gaining the hunting trade is B. H. Dyas & Co., Los Angeles, California. In their large basement salesroom they showed a hunter's lodge built of logs, and on entering one came into a well equipped rest room, with big fire place at one end, skins, antlers and guns upon the wall; easy chairs, and a long table. Here were copies of the leading sporting and outdoor

Digitized by Google

B. H. Dyas & Co. have a national reputation as one of the most enterprising, progressive and successful merchants in the United States. If our readers should chance to be at Los Angeles any time, they would find a visit to B. H. Dyas & Co. an education in itself.

They are firm believers in sales windows. They are leaders, not only in sporting goods, but in better merchandising methods.

magazines, and subscriptions could be obtained from the clerk in charge. At one end a door opened out upon a long rifle range, which extended the entire length of the salesroom. A rack held a case of guns which one could examine at his leisure.

This lodge was maintained all the year around, but during the hunting season it was given special prominence. Several weeks previous to the opening of the hunting campaign they secured a large supply of the digest of the game laws of the state, printed in pamphlet form. They also sent a man to learn the principal game covers; to list all the lodges and places of entertainment in their vicinity; and to ascertain the most expeditious method of reaching them and the cost thereof. Not satisfied with this, they had consulted hunting guides and learned their rates per day; talked with the owners of boats, and secured prices for rent of same, and, in fact, collected all that miscellaneous information so valuable for a hunter. During their hunting goods campaign all this information was disseminated free from a booth by a man who was also an authority upon guns, and could talk entertainingly upon all topics connected with hunting equipment.

Lastly, they backed up their campaign with a striking hunting window, which had crowds in front of it all the time. Against the rear wall was hung a buffalo robe, topped with the mounted head of a bison, while the skin of a grizzly bear covered the floor. On racks were hung corduroy hunting coats and red caps, while on the floor were strewn a number of cartridge boxes. Laid on the floor and set in racks were a number of different types of guns. For several days they conducted a Used Gun Sale, selling at very attractive prices a number of guns they had traded in on new ones. They also advised that they made a specialty of repairing guns, and through cards in the window, and ads in the papers, suggested that all hunters bring in their guns to be examined ere starting on a hunting trip.

## HELP YOURSELF AND COUNTRY BY A CONSTRUCTIVE LIFE

The greatest builders in the world are those who build character.

Men have built houses, roads and temples that lasted for generations and empire builders have raised structures that lasted through centuries, but the man who builds character fabricates something that lasts through eternity.

Efficient industry yields two of the best results in the world; production and the development of character. Wholehearted work brings out the best that is in us and drives out evil. Production is the only thing that will give food and clothing to the people and reduce the cost of living.

Economy is the kind of management that takes care of the product and makes the best use of it, securing all that money can of comfort, education, development, saving and service.

It is a great thing to be free and the only free man is the one who is self-sustaining. Make sure of your independence by thrift. Work and save.

"No really big boss ever objects to having someone do his work for him. The Big Boss can always find something bigger to do."

# Cutlery Importers Evade The Law

**U. S. Customs Inspectors Permit Unbranded Cutlery Ready Access to American Markets—No Real Attempts Made to Enforce Law Requiring Country of Origin to Be Stamped Thereon**

(Note.—The facts below are given us by a representative cutlery manufacturer, whose business it is to get first hand information. We have every reason to believe the statement of our informant.)

"IF there are not a number of U. S. Customs officers secretly conniving with importers of German cutlery to keep secret the origin of the many shipments now being dumped on the American market, they must be asleep or woefully ignorant. In either event conditions are becoming such they should either be summarily removed or the law requiring the country of origin to be stamped on each article of foreign manufacture, no matter where it originates, should be taken from the statute books."

The laws of the United States explicitly state that all articles of cutlery imported into the United States shall be branded with the name of the country where made.

**Quality No Excuse**

In the United States we make cutlery equal to any made in the world. Because a piece of cutlery is stamped "imported" does not mean it is any better than that made in this country. In fact, the best cutlers of the United States produce cutlery which is superior in quality, temper, design, balance, etc., to the imported. American made cutlery will run nearer true in temper than any foreign made cutlery, because of the scientific methods used in this country and the elimination of the human element as far as possible.

For some time cutlery has been coming into this country from Germany with absolutely no brand on. This is a direct defiance and violation of our laws.

How do such articles pass our Custom House inspectors? The inspectors are supposed to inspect everything coming into this country, and it looks as if many of our officials are careless or permit strong "influences" or appeals to swerve them from their duty.

It is reported that recently the Steinen Supply Co. of Los Angeles, received a shipment of German made pocket knives, purchased from an importer, and the cartons had only a small sticker on marked "Germany," but the knives had no brand on at all, let alone the country where they were made, as required.

It is said that Benj. Weilputz, Los Angeles, went to Germany last fall and purchased a quantity of German made cutlery, and shipped it to Los Angeles. When the shipment arrived the Custom House held up the shipment, as some of the articles were not branded in any way According to the deputy collecter, officials in Washington made a special order to allow articles to be marked "Germany" with marking ink. How long was it expected for that mark to remain? Even now, it is said there are many of the articles with the mark nearly obliterated.

By whose authority did Washington issue such an order, if the law specifies that such articles must be branded into the steel?

One of the collectors states an order has been issued that all cutlery must be branded with a steel die and etching will not be allowed and the name of the country where made must be on, and the city where made will no longer be sufficient, such as Sheffield, Solinger, etc., which formerly was all that was required. This order is in accordance with the law and therefore correct.

The above two transactions are not illustrations of what are exceptions, but are illustrations of what is being done regularly to put German made goods on the markets of this country.

The following incident is told by a Custom House official. Some time ago a consignment of German lead pencils was received at the Custom House unbranded. The Custom House officials held them up and the consignee begged and pleaded to have them released, saying that he had them come through unbranded as he thought they would sell better without the brand "Germany" on each as required by law.

Unless merchants are sufficiently loyal and push U. S. made goods, our workmen will not be kept busy, thereby earning money to buy necessities as well as the luxuries for their own need and comfort. If our workingmen are not busy, they will have no money to spend, and if there is no money to spend, where will the jobbers and retailers sell your goods? In foreign countries? No.

This does not mean that we should not purchase foreign made goods, but unless they are willing to comply with our laws, they should be forbidden to ship into this country. If importers allow any goods, not branded or complying with our laws, to pass the Custom officials, they should be barred from importing anything, and all articles brought into this country in violation of our laws should be confiscated. If found on the shelves of jobbers or retailers such possessors will be treated as any other violator of law.

The following happened recently in a western city. A salesman from a large importing house in New York came to see the buyer for a jobber, and after talking for a few minutes,

Digitized by Google

asked if they were selling German cutlery. The buyer immediately said, in a manner not to be misunderstood, that they were not and would not.

In New York the story is told of a well known American cutlery factory employing American workingmen exclusively being sold a few years ago to German interests. In order to thoroughly Germanize the working force, and not violate our contract labor law, a German workman would come to this country, go to that factory, present a card, secure employment, replacing an American workingman. This kept up until the entire force were Germans, not intending to become American citizens.

"I would impress upon every jobber, their buyers and salesmen, every retailer, every clerk, that unless you sell American made goods, not alone cutlery, but all American made goods, and push them, our workingmen will not have steady employment, and this means no money to spend. No money to spend means hard times, and hard times mean retrenchment, slow sales and low standard of living, and then where will the country be?"

American made goods are equal to anything made in the world.

---

If you want a thing done, take it to a busy man.

---

Excuses are the easiest things in the world to find, which is probably the reason why they are so useless.

---

All managers look more or less alike as far as their physical appearance is concerned—but, Oh, man, what a difference there is in their records!

---

There is plenty of business all around you. It isn't a bigger store you need in order to do more business. What you require is a broader vision. If you cannot milk your present territory dry you won't be able to do any better in a different pasture.

---

## THE WINNING WAY

If you put a little lovin' into all the work you do,
And a little bit of gladness, and a little bit of you,
And a little bit of sweetness, and a little bit of song,
Not a day will seem too toilsome, not a day will seem too long;
And your work will be attractive, and the world will stop to look,
And the world will see a sweetness, like the tinklin' of a brook
In the finished job; and then the world will turn to look at you
With a world's appreciation of the thing you've found to do.

## HAMLET ON PRICES

To cut or not to cut. That is the question.
Whether it is not better in the end
To let the chap who knows not the worth
Have the business at cut-throat prices, or
To take up arms against his competition,
And by opposing cut for cut, end it.

To cut—and by cutting put the other cutter
Out of business—'tis a consummation
Devoutly to be wished. To cut—to slash—
Perchance myself to get it in the neck—
Aye—there's the rub; for when one starts to meet
The other fellow's prices 'tis like as not
He's up against it good and hard,
To cut and to slash is not to end the confusion
And the many evils the trade is pestered with:
Nay, nay, Pauline; 'tis but the forerunner
Of debt and mortgage such a course portends.

'Tis well to get the price the goods are worth
And not be bluffed into selling them for what
So-and-so will sell his goods for.
Price cutting doth appear unseemly
And fit only for the man who knows not
What his goods are worth, and who ere long,
By stress of making vain comparison
'Twixt bank account and liabilities,
Will make his exit from the business.

---

## DESERTED VILLAGES IN WAR-TORN FRANCE

One hundred towns in the war area of France have been permanently abandoned, and no effort will be made to rebuild them. Former inhabitants who have come back to their old homes have been ordered to find accommodations elsewhere, as the old sites are too dangerous to live on. During the war this ground was turned over and over, burying explosives of all kinds to unknown depths. The American Red Cross is finding homes for the unfortunate people and doing everything else possible to make them comfortable.

The French government has purchased the land on which many of the villages stood and to avoid loss of life will keep possession of it until it can be made safe.

**BUYERS IN INDIA VALUE THE HARDWARE WORLD**

We are enclosing renewal order for subscription to your most interesting publication, and want you to know of our appreciation and the value which we place on the HARDWARE WORLD.

We are asking our New York agents to remit our subscription.

With our good wishes, believe us,

Yours sincerely,

S. G. HOOSEIN & CO.

Bombay and Calcutta, India.

# Ten Window Display Suggestions

HERE are ten suggestions for hardware windows—help yourself to them. They are simple and easily worked out, but unusual and interesting enough in their conception to attract attention, provoke comment and put in the mind of the looker, without his being aware of it, the idea of a future purchase.

These suggestions can be used by the hardware dealer whose store is in a small town and whose job it is to fix up his own windows.

**Display of the Oldest Articles in Your Community**

When a man buys only once in a decade or a lifetime, he doesn't mind it as he does if he has to keep repeating. Accordingly, a display of the oldest hardware in the households of his patrons, whether sold by him orrginally or not, makes a good window.

Go to a dozen pioneer families in your community and you will have no difficulty in getting enough ancient wares, still in active use, to fill your window. The oldest gun, the oldest scissors, the oldest kettle, and so on up to the oldest plow with its rusty steel. You might even have a picture of the oldest wagon, with the comment that you didn't have room for it in the window and that it belongs to Bill Jones, who has driven it half a century, more or less, and still drives it.

There should be a historical tag attached to each article, with bold lettering, giving the name of the owner and the length of service. Such a display will prove to be a great inspirer of confidence.

People will come to believe, from these concrete proofs, in the longevity of good hardware. "I may have to pay quite a bit for a pair of scissors for Martha, but if they are good I probably won't ever have to buy any more."

**Another Attention-Getting Method**

There is another kind of window that gives the hardware merchant an opportunity while calling attention to his own wares to advertise the merchants of his town who are engaged in other lines of business. It's a good thing to do occasionally.

There is a well known and prosperous merchant in a Northwest city who frequently devotes his entire newspaper advertisement to a whimsical and humorous statement regarding some other merchant, sometimes with a postscript reference to himself and sometimes without any reference whatever beyond giving his trademark. An effective window display might be made to carry out the same principle.

Show the knife of Fred Goff of the "Modern Meat Market," who says it has cut about twenty thousand of his luscious steaks since we sold it to him.

Similarly, the scissors of Tom Gray of the "Dry Goods Emporium" can be featured, with a statement of the number of yards of cloth they have cut of the cloth he sells so reasonably. And so on.

**Make Most of Local Events**

Some week, say, when the Woodmen of the World are putting on some special occasion in his town, the hardware merchant can place a stump in his window with one of his new axes sticking in it at the correct angle. This is only typical of the way he can use his windows to boost worthy organizations. He will not only acquire a valuable reputation for having the right community attitude, with its consequent reaction of increased trade, but he can get frequent motives in this way for effective and timely windows.

**Interesting the Women**

Put one of your latest up-to-the-minute washing machines in one corner of the window. In the other corner put a washtub, a washboard and all the other accompaniments of the ancient washday. Then letter a conspicuous legend: "We sell both—but we recommend this."

**You Can Use This Rope Idea**

For a rope display, put out samples of every size cordage you have on hand. Get the champion knot tier in your community to tie every kind of knot in the catalogue. It would probably be considered sacreligious for your sign to say "The Tie That Binds," but there could be no objection to the announcement, "A Knotty Problem."

Or you might have the different sizes of rope suspended from the ceiling, with a huge weight attached to the smallest and placards attached to the others giving in each instance the tensile strength. Or again, you might have a little swing, a little flag pole with its rope, a little clothesline with its "washout," a tied trunk, etc., indicating in this visual way as many uses of rope as possible.

**A Wet and Dry Suggestion**

Place a sign the length of the window with the words: "Have a Drink on Us." Then put in a pump, a drinking fountain, fix up a well with the old oaken bucket that hung in it, a bucket and dipper, a watering trough, a pitcher and glasses. Perhaps you can even find an old gourd, "which we don't sell."

**Cooperate With Your Local School**

The manual training classes of the high school will be glad to use your window at least once a year. On each article of furniture lay out from your stock, with or without comment, the tools required for the manufacture.

**Campfire Display Always Attracts**

When the autumn days come on and the nights begin to grow snappy, fix up a window suggestive of warmth and cheer. A camp fire

Digitized by Google

by means of wood, red paper and an electric bulb, a fireplace with all auxiliary equipment, an oil heater, an electric heater and the wood stove you want to feature, can be arranged so as to give the proper effect. In connection with this you can state that "We Furnish Everything But the Wood."

**Everything on Wheels**

You can't possibly put all your wheeled vehicles in your window, but there is room for a large assortment of wheels. Display a lawn mower wheel, a baby carriage wheel, a bicycle wheel, a buggy wheel, a wagon wheel, a rake wheel, in short every kind of wheel you've got, with the statement that "We Have the Rest of These in Our Store."

**A Dirty Display**

Fill your window with several inches of soil. Put in a plow with buried share turning a furrow, a spade, a pick, a filled wheelbarrow with a shovel in it, and everything else with which men delve and dig and cultivate. To add a feminine appeal include a dust pan, brooms and mops. Then say in big letters: "Let Us Do the Dirty Work."

## A BIRD IN THE HAND

"A bird in the hand is worth two in the bush,"
We are taught by our dads and the rest of the push.
But here is a motto that's equally fine:
"A car on the way is worth two at the mine."

But the car on the way may be slow on the move;
The fact may another great principle prove.
The car may not move half a mile in a day,
So "A car in the yard is worth two on the way."

But even a yard may be down on its luck,
Have trouble with horses, or wagon, or truck.
Whatever you need, be it soft coal or hard,
"A ton in the bin is worth two in the yard."

## A POLITICAL GLOSSARY

(By S. G. Blythe)

Conservative—One who has his.

Radical—One who hasn't.

Wet—An acknowledged thirst.

Dry—A camouflaged thirst.

Ireland—The political porcupine.

Light wines—Something the wets talk about but never drink.

T. Jefferson—The most copious letter-writer in history, bar one.

W. Wilson—The one.

Ohio—The mother of Presidents threatened with triplets.

Native Son—An accident superimposed on a climate.

Climate—(1) The last word. (2) The first word. (3) Every other word.

## DO NOT DODGE DIFFICULTIES

A. T. Stewart, the famous dry goods merchant, liked to engage men who had failed in business. He reasoned that their difficulties had probably taught them much.

Difficulties test.

Difficulties develop character.

Difficulties help to make a man, just as blows help to make steel.

Mothers' darlings, who are shielded and petted and pampered rarely amount to much.

Examine the careers of the hundred foremost business men in America and you will find at least ninety per cent of them had to battle their way against extraordinaary difficulties.

A twenty-dollar-a-week clerk can discharge easy, routine duties.

We ought to pray—at least during the first half of our life—not for ease and opulence, but for a full measure of obstacles and pitfalls and character-testing experiences.

Coleman du Pont, whose achievements have been unusually many-sided, once explained that his interest in any enterprise waned immediately he had overcome all the dificulties of organizing it and putting it on a smoothly-working. successful footing. When one undertaking reached the easy stage, then he turned to something beset with new and difficult problems.

Edward L. Doheny, now perhaps the foremost oil figure in the world, is similarly constituted. When he had developed a property to the money-making stage—when, as he once remarked, "There was nothing left to do but draw in the profits"—then he sold out and started on a new quest, eager to pit himself against some new and difficult situation.

There is more joy in putting forth effort than in gloating over easily-won profits.

Difficulties make men.

Ease makes mollycoddles.

It is harder to climb than to stroll along a level road or dawdle down hill.

Difficulties are stepping-stones leading to the top.

Therefore, do not dodge them, do not run away from them. —Forbes Magazine.

---

The best reward is sense of worthy achievement.

---

Good times for all can only be the product of good work by all.

---

Too many of us want to go fifty-fifty on the Ten Commandments. We start out breaking one and salve our conscience with the fact there are nine left. In time we believe we are not getting what is coming to us, and break a few more. We regret breaking even any and promise for the remainder of our sojourn on earth to keep them in entirety.

## AMERICAN PLAN OF INDUSTRIAL WORK A SUCCESS

In the spring of the current year it was evident that a trial of strength was to be brought between the Building Trades Council and the business men of industrial communities in the state of Utah. Through the Utah Associated Industries an excellent coordination of effort was put forth and instead of the usual desultory attempts on the part of distinct lines of business to contend against the well organized Federation of Labor, the whole business fraternity centered their activities in the Utah Associated Industries.

When the demands were made for unusual and extravagant concessions by the Building Trades Council, the general contractors as a body refused to accept the dictatorial leadership of the walking delegate. This led to a request for a conference, which was granted. A tentative agreement was drawn up with the understanding on the part of representatives of labor that they would endeavor to have such an agreement accepted by the craftsmen involved. The agreement provided that there should be no strike on account of the source of material or the way in which it was delivered to the job. In other words it was recognition on their part that the sympathetic strike should be eliminated.

It proved, however, that the representatives of labor at the conference had at no time any intention to accept such an agreement, but rather to follow their usual characteristic tactics of delay and procrastination in the hope that in the meantime the cohesion of the business forces would fail.

After three weeks' time in which the Building Trades Council were allowed to make a decision, the contractors through the Utah Associated Industries announced that they would proceed with their building on the terms of the agreement just as if the union had accepted it. Cards announcing this fact were posted on the jobs.

This precipitated the crisis, union men walked off and building operations ceased. Immediately thereupon the Associated Industries drew together the business men and the announcement followed that thereafter men would be employed in the building trades irrespective of their affiliation with the unions. From that moment the fight was on. After a short period of inactivity, building operations resumed on the American plan. The lumber yards and mills in cooperation with the contractors shut down their plants so that for some weeks no building supplies could be purchased. The effect was instantaneous and served notice to the unions that the supply houses were in a position to give practical demonstrations of how business men can cooperate. Picketing was indulged in, but by the cooperation of business men and the necessary pressure exerted upon the contractors, we continued to maintain the open shop.

Contractors were agreeably surprised to find that the woods were full of excellent non-union craftsmen, a thing which they had refused to believe while union domination existed. It was then clearly a trial of strength. Repeated attemps were made by labor leaders to have the agreement (which they had refused to accept) ratified or to enter into some kind of negotiations to save their face. This was repeatedly refused by the Associated Industries and the unions were told that their men were invited to return to work on the same basis as any other workmen.

The struggle may be said to have begun on May 1st. On August 9th the Building Trades Council voted that the men were permitted to come back to work under the American plan card, but of course with the distinct understanding that they begin to "bore from within." Contractors are retaining their non-union men who helped them during the crisis and the capitulation of the Building Trades Council is looked upon here as one of the biggest achievements in industry in this section of country.

A necessary lesson has been taught the unions and for the first time in their local history they have felt the strength of organized business. Other employers in the state have thrown off the union yoke and there seems to be no disposition on the part of any line of business to continue to accept the time honored demands of the walking delegates. The spirit of industrial heads has changed and the recent complete success has added to this spirit. Eternal vigilance is now the price of our continued success and our organization is alert to detect any defection from our ranks of any disposition on the part of contractors or other employers to negotiate individual agreements with the union. The American plan is looked upon as an established institution in Utah.

---

## NO CUT IN CUTLERY WAGES

While a slowing down has been noticed in certain branches of the nation's industrial activity, the cutlery industry forms a very noticeable exception and according to recent New York state statistics another five percentum were added to the operatives engaged in cutlery making. Taking New York state statistics as a basis the cutlery industry employs today 187 men for every 100 employed before the war. During the same time the total wage payments have been increased at the rate of 358 per centum. The large demand for American cutlery from domestic and foreign consumers continues to affect the employment in that industry very favorably.

---

There's more fun in being forbearing than overbearing.

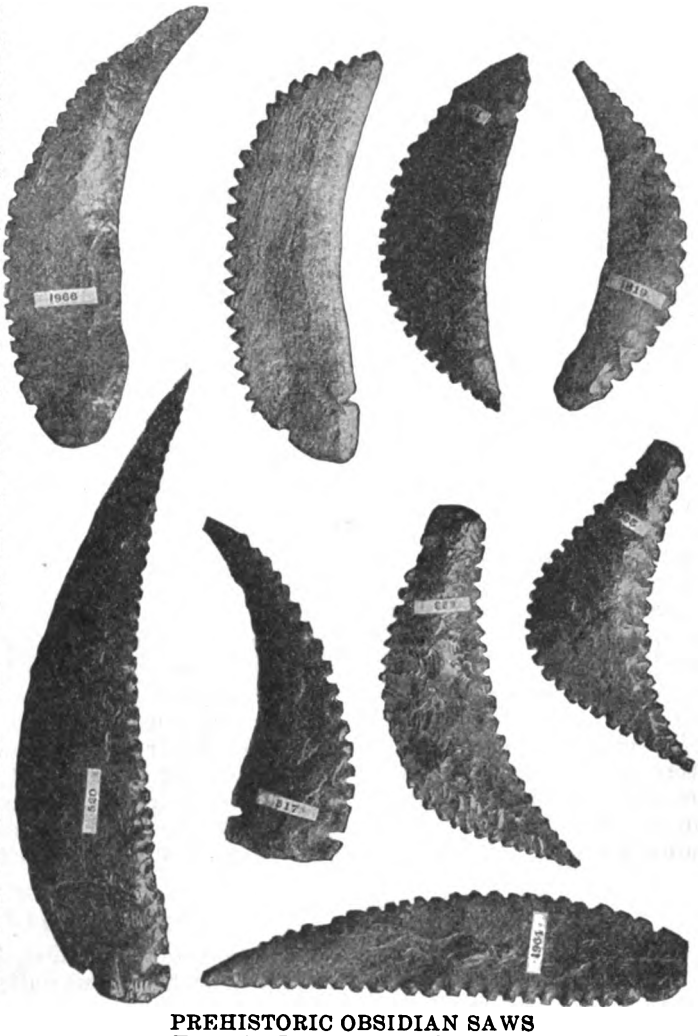
# Saws of Our Indian Ancestors

(By James A. Barr, of the Sierra Educational News)

AMONG the original saw makers were the Indians of Central California. Away back before Columbus ventured across the Atlantic, they were making saws of real quality! Just how the saws were made or how they were used or when they were made, no one can tell. Only the ancient camp sites and the mounds and burial places are left and even these are now mostly obliterated by the hands of the plowman.



When the writer was a boy, something over 40 years ago, he began to study the mounds, burial places and implements of these ancient saw makers. The Barr collection represents the exploration of more than 300 village, camp site and burial places. In all, the collection comprises fully 6000 implements in obsidian, stone, bone, shell and clay.

Climate and environment combined to make the Central California region an ideal home for the Indian. The many rivers and channels were filled with fish and mussels. Water fowl swarmed in countless thousands. Elk, antelope and deer were plentiful. The native California oak furnished a yearly supply of acorns.

With such a varied and unfailing food supply, with a mild climate, and protected by mountain ranges for the most part from the incursions of the tribes to the north, east and south, the Indians of the great central California region developed through generations a culture peculiarly their own.

With a constant food supply and with little need for war, they had ample time for the manufacture of implements representing the highest type of Indian workmanship. Many distinctive forms in obsidian, stone, bone, shell and clay were developed in this favored region.

For more than forty years the writer has been on a "still hunt" for the pre-historic product of the saw makers of Central California. The collection now includes 158 of these really wonderful implements. This seems to be almost a "corner" on the product.

PREHISTORIC OBSIDIAN SAWS
From the James A. Barr Collection

### Variety in Design

These saws vary from 9-16-inch to 4½ inches in length. A few are without serrations. Some are serrated on the convex edge; some on the concave edge; some on both edges. Most of them are notched as if for a handle.

A few are double saws; in two, the outer edges form a right triangle and the inner the segment of a circle. Three are of soapstone while all others are of black obsidian. The soapstone saws were, of course, for purely ceremonial purposes.

One can only guess as to the use of these rare implements. All are fragile and could not have been used for sawing wood. One guess is that they may have been used to skin game or fish. Another guess is that they were used to scarify the flesh on ceremonial occasions. Owing to their extreme rarity it is certain they were not in common use.

### Saws Found With Bones

In most cases the mounds and camp sites where these saws were found seem to have been used both as village sites and burial places. No part of any mound or camp site seemed to have been especially set aside as a burial place.

Most of the saws were found near charred human bones. The most notable find was thirty-

Digitized by Google

one obsidian saws, distributed in the form of a semi-circle around what seemed to be the feet of what was surely the "prince" of saw makers. With these saws were twenty-eight pieces of obsidian, evidently a stock of material ready for use.

**A Typical Discovery**

To show the painstaking care used by a man with a hobby in keeping data, I quote from field notes taken twenty years ago in making note of one of these saws:

"No. 1964. Black obsidian saw. Serrated on both edges; 3½ inches long. With this skeleton were found eight saws. Five were of obsidian, all longer than the average. Three of the saws were of a new type being made of soapstone. The eight saws were found in ashes and charred coals just above head of skeleton. The saws were in a compact bunch seven inches long. Between right arm and body was a small pipe. Under the head was a broken arrow point. By the right arm were two pestles. Wampum on breast and by arms. Skeleton 2 feet deep. Lying north and south, head to north. Island mound. November 6, 1900."

In delicacy, in beauty of design and completeness of finish these obsidian saws represent the highest type of prehistoric craftsmanship. And yet consider with what crude tools they were made. Without metals of any kind, the saw maker's only tools were crude bits of stone mixed with Indian patience. But their product endures and demonstrates a very real, even if prehistoric, quality. —Disston Crucible.

## A PRAYER WORTH REMEMBERING

Teach me that sixty minutes make an hour, sixteen ounces a pound, and one hundred cents a dollar. Help me to live so that I may lie down at night without a gun under my pillow—unhaunted by the faces of those whom I have wronged.

Help me to earn my meal ticket on the square and in conformance with the Golden Rule.

Deafen me to the jingle of tainted coin—to the rustle of unholy skirts.

May I be blind to the faults of my fellows and see my own clearly. Guide me so that I may look across the dinner table at my wife and have nothing to conceal.

Keep me young—that I may laugh with the children. Make me sympathetic—that I may be considerate of the old.

When comes the day of drawn shades and fragrant flowers, of quiet footsteps and hushed voices, when the wheels crunch on the gravel walk and the neighbors whisper, "How natural he looks!"—make the ceremony short and the epitaph simple:

"Here lies a Man!"

**Small rewards come to him who foreshadows events.**

## FROM A WINDOW TRIMMER'S NOTEBOOK

While there are abundant opportunities to conceive and create new designs in the arrangement of merchandise, there are certain shapes that are peculiarly adapted to show window trims. They include the circle, half circle, horse shoe and diamond. All such diagrams leave a center space, in which the name of the brand may be shown, together with whatever descriptive phrases the dealer may choose to use.

The color scheme should always present more or less of a contrast to the color of the packings, boxes or containers.

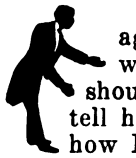
In pinning or nailing boxes containing merchandise the goods are very often damaged by careless driving or pinning. The fasteners should go through the corners of the boxes in such a way that the contents therein are not touched. This may seem like an unnecessary warning, but, as a matter of fact, dealers often do destroy goods in just the way described herein.

Packings, boxes, or merchandise should be raised sufficiently high to be on a level with the average man's eye.

Trims that are placed flat are never very effective. The packings can be raised on platforms made from paper boxes, and covered with colored material. To get the best results the boxes of merchandise should always occupy the foreground of the display. If you are displaying a variety of goods always place the smaller articles in the fore-front of the window. Then the name of the brand on the smaller articles can be seen at a glance.

**Any Merchant Can Trim His Own Window**

The sloppy-looking window is really an unpardonable sight. Displays containing small objects are hard to trim right, but any retailer with an eye to the appropriate can learn to design them right just the same.



If a dealer can't afford to engage a professional window trimmer, he can take time to learn enough about the game to trim his own window space and not spoil the effect of his show windows by having badly arranged trims. Nor should a retailer depend entirely on window displays furnished by the manufacturer in his line. To do that is to nullify the powers of originality and originality always attracts.

Some merchants think that some lines of goods will sell themselves and there is something to that, but some lines of goods offer such abundant opportunities for working out artistic and trade winning designs that the prospective display should be studied over minutely in order that it may rightfully fulfill its function.

Hang on. Nobody ever fails until he loses his grip!

## CONFESSIONS OF A HUSBAND

Well, my wife has landed on me again. You know I am one of those well-meaning men who thinks the wife should know all about the business. I tell her just what the income is and just how I put it over. There isn't an angle of the little old game I don't confide in her.

Of course, my main idea is to prepare her in case of emergency, such as the sudden snuffing out of our noble self. But there are times maybe when anxiety runs to boasting. Yesterday I fear was one of those unfortunate days.

For a long time the wife has wanted a fireless cooker. The things cost a lot of money, you know, and being of a conservative disposition (as far as the household expenses are concerned, at least), I have somewhat strenuously fought the idea. A man simply must take a stand somewhere, that's sure.

Well, last night when I had gotten home and finished dinner, there was nothing to it but I had to break out and tell the family assembled all about the adding machine we had installed in the office during the day.

I explained how easy and certain it made figuring of an extensive nature which we had to do two or three times a day. I elaborated on how little room it took up and that it wasn't wearing out and deteriorating while it was not being used. In fact, I made quite an extended and convincing argument.

I knew I was getting by in good style, because the wife was smiling and encouraging my recital just as though she entirely agreed with me in the expenditure, which I felt a few qualms about, because as a matter of actual fact, we did not have a tremendous use for the machine. But you know how it is, it's a nice piece of equipment and it gives a certain indefinable class to an office, which in itself is a factor not to be overlooked.

"And was it very expensive?" asked the wife after I had sort of run out of oratory.

"Well, you can't buy such things for anywhere around $25.00," said I, "they cost real money, you know."

I can see now she was feinting for the knockout, but at that time I was feeling rather chesty and kind of patting myself on the back.

"But," she continued innocently, "you have use for it two or three times a day don't you?"

"Well, not exactly," I admitted, "but it comes in pretty handy a good many times."

I was getting a bit restless, the thing was going over too smoothly and it seemed like there ought to be an argument or at least a small criticism of my expenditure.

"Well," she said decisively, and I began to get ready for the blow, "I think it is perfectly fine to be able to have such conveniences in your office and I think it is good business also."

"Now," she continued, "if you will substitute the word 'fireless cooker' for 'adding machine' and repeat the line of reasoning so well presented by yourself, inserting a positive statement that I have use for it every day of the week, including Sundays, and not forgetting that a fireless cooker will not take up much room and also that it will add considerable class to the kitchen, with the added feature that it can be purchased for around the miserable pittance of $25.00, we will close the incident for the night and get ready to go to the show."

Oh boy, what chance have you got when a woman won't listen to reason? And how much less is your chance when she does and swings it right back onto your unprepared head?

It's a good thing these hardware merchants do not put any such heartless logic into the average woman. It would make 'em rich at our expense.

Supposing I should write a little series of my sad experiences and then some above mentioned hardware merchants should take a notion to print 'em in a little booklet entitled "Confessions of a Husband," and pass 'em around the neighborhood. And supposing some heartless wives would let 'em lay around and some poor husbands would pick 'em up and read 'em.

Oh boy, may the Lord deliver us from any such catastrophe.

---

## LITTLE REALIZED PROPERTIES OF COTTON

Who would imagine that cotton could be used as the basis of a waterproof compound or of a cement?

There is nothing sticky about a ball of fleecy cotton, nor yet about a piece of ordinary cotton cloth. Our cotton stockings (applying to men, of course—the ladies all wear silk) and our cotton underwear do not stick to us, even when wet with perspiration. In fact, there is nothing sticky about cotton nor cotton goods as most of us know them and see them in everyday use.

And as for waterproofness, who would even think of trying to keep rain off anything by spreading a cotton handkerchief over it; would we go out in the rain in our summer underclothing, expecting it to keep the rain off us?

Yet, cotton, dissolved and treated in solvents and acids, is the basis of a compound that is as waterproof as rubber. It is called pyroxylin and, used as a coating on a fabric base, forms the thoroughly waterproof surface of the now largely used leather substitutes.

Pyroxylin cements are about the stickiest things one can well imagine. In fact, it is well not to get it between two objects it is ever designed to separate again. It is practically impossible even to soak them apart, for this pyroxylin product of cotton is impervious to water and refuses to soak.

## PERPETUAL INVENTORY DEFIES BURGLARS AND FIRE

Burglars entered the store of M. C. Taylor at Mound Valley, Kansas, and helped themselves to his stock. After a hurried investigation, Mr. Taylor estimated his loss about $400.

He called in the insurance adjuster and together they inventoried the department in which the loss had been and checked up against the perpetual inventory record. This check, to his surprise, showed a loss of $956, and the insurance company settled immediately, without argument, for that amount. Without his perpetual inventory, Mr. Taylor says he would have been glad to settle for $400, and before the check up he would have been lucky to get off with that amount.

Almost since he started in business, Mr. Taylor has maintained an unusually complete and efficient stock record. When goods are received at the store a stock number always is assigned to each kind or style of article, this number being entered in the top left hand corner of the stock record and also on the wholesaler's invoice opposite the wholesaler's stock number for the same merchandise. This, of course, is for reference.

On the stock record card, the cost, selling price and department also are entered in the proper columns at the top, and the amount of stock received is entered in the left hand column. At the bottom of the card, space is provided for an entry showing from whom the goods were purchased and the date of purchase and re-order, if any. Then the cards are filed numerically by stock number, in a steel tray, the guide cards numbering "100," "200." "300," etc., so that any card may be quickly found.

When a sale is made, triplicate tickets are filled out, the clerk entering the stock number of the article, the number of articles purchased, name of the article and the selling price. The triplicate either is handed to the customer in person or sent out with the goods. The original and the tissue duplicate, which are attached, are then sent to the bookkeeper.

By reference to the stock record cards for the goods listed on the ticket, the bookkeeper finds the cost price of the goods, which information she enters in the left hand column on the original sales slip. At the same time she checks the selling price to see that no mistake has been made by the clerk. The quantity sold is then noted on the stock record by the usual tally method.

Sales slips are sorted and audited by departments and clerks, and then arranged in ledger order for posting, which is done each morning for the preceding day's business. The posting work usually starts about 10 o'clock in the morning and always is finished and proved by 10:30 or 10:45. A bookkeeping machine saves time at this stage.

### Duplicate Sales Slips With Statements

Statements are always mailed out at the end of the month. As this is a country store and customers usually pay their bills in person, the tissue duplicates of the sales slips on which the account is itemized are handed to the customer when he calls to settle. Mr. Taylor finds this system very satisfactory, although a great many merchants mail the tissue duplicates with the statements.

The customer's ledger control is posted daily from the totals of the cash and the charge sales obtained when the sales slips are audited before the ledgers are posted. This ledger control is posted on a regular accounts receivable ledger sheet, no special form being needed.

### Profit Analysis for Each Day

By means of a profit analysis sheet, Mr. Taylor is able to determine his exact gross profit in each department each day. When the daily audit of sales slips is made by departments, a run also is made of both the cost and the selling price of the goods sold, on each sales slip.

Mr. Taylor has found that his system of bookkeeping gives him such a complete record of his stock and everything else connected with his store that he always knows just what he has. If he should have a fire or even another burglary, he has the figures right at hand that would prove conclusively to the insurance adjuster his exact amount of the loss.

## WHAT'S IN A POCKET KNIFE?

There are many things that go into the making of an American pocket knife and not all of them are to be had in Uncle Sam's country. Ships bring these goods, and their cargoes look like a specification of the presents given by the Queen of Sheba to King Solomon of olden days.

There is ebony from the East Coast of Africa and the Island of Madagascar, cocoa wood from Cuba and the West Indies, rose wood from Central America, pearl mother of the shell of pearls taken from the sea by divers in the East Indies and Australia. There is the horn of the buffalo and the stag and there are those two novelties, artificial stag horn, made of the bone of cattle and celluloid, not found among the presents to King Solomon. All these articles are used mainly for the making of the handle of a modern pocket knife.

The principal part of a knife of course always must be the blade. So best steel must be bought from the crucible steel manufacturers in America or it may also be imported from England. The steel for the spring action of the knife is of American make. Plating is done with the aid of nickel. And to make full the measure, there also goes a liberal sprinkling of zinc, copper and brass.

## READ THE ADVERTISEMENTS

### Present Day Classics

English, we are told, bids fair to be the universal language.

English is the means of expression employed by the two greatest nations on earth. It is the language and instrument of the highest in literature. No other tongue can compare with it in richness of vocabulary, in the wide variety and choice of its words, in descriptive power, in graphic figures of speech.

Into it have been woven hundreds and thousands of colorful phrases and terms from many different foreign languages. English is the most cosmopolitan tongue in existence, so world-wide is the extent to which it has enriched itself through the adoption and acquisition of alien terms. Why, indeed, should it not be the Esperanto of all nations?

But, lament the Purists, in America we have grown grossly careless and slack in our speech. They say that we not only mumble and mouth our words, but express ourselves with deplorable inanity and are hopelessly addicted to slang.

To a certain extent there is much truth in their accusation. But there is also reason to believe that we are gradually awakening to a national appreciation of our linguistic slovenliness. Professional people, writers, men high in educational circles have noted a marked improvement in the last decade. And credit for this is not due entirely to the efforts of the reformers, but to the advancement of that mightiest of mediums—Advertising—to the perfection of an art.

### Advertisement the Most Potent Educator

Its influences are as wide as they are diverse. We are a press reading public and a magazine perusing people. And both newspapers and periodicals are largely comprised of advertisements. They are constantly before us. They mould our opinions, sway our views, and alter our perspectives. And that is their purpose, and their mission. But that is not all.

Every man and woman today who wishes to improve his or her speech, to possess a good, strong, workable and effective vocabulary, to acquire a fair appreciation of what is good English, should study the advertisement.

You will find that the subject has been most carefully analyzed and the argument developed in orderly sequence. You will note how carefully balanced and chosen are its wording and phraseology; the emphasis stressed at certain points; the comprehensive and brief, yet forceful statements; and the thorough elimination of every unnecessary word.

### Studied Use of Valuable Space

Advertising space costs money. Illustrations require space, and reading matter must therefore be so condensed that every word and phrase and clause and sentence will carry weight. They must be clear, terse, direct, to the point, and withal simple in construction. There is no room for long and involved argument. And that is not all.

In order to attract your eye, the advertisement must not only be striking and arresting, but must hold your interest and accentuate its appeal by being readable and entertaining and graphically pictured as well as instructive and of an informative nature. And in so doing, must at the same time drive home its premises with irrefutable logic and fact. A good advertisement is an artistic triumph.

### No Better Text Book

And so, if you would be convincing in your talk, if you would have your speech strong and effective, if you would speak with authority and command respect for your opinions, if you would be clear and concise and logical in your statements—study the advertisement.

If you desire to develop an interesting, well informed personality the opportunity is yours if you will but grasp it. History, the sciences, literature—have all been ransacked to provide parallels that will present forcefully the message of the advertisement. Read them; study them. They are the Great American Classics.

---

## THE KNOCKER

The Devil may take the man who knocks,
He never was any good, By Jocks;
He curdles the milk, he sours the cream,
He throws cold water on all your steam;
He never does anything else but kick,
'Till he makes the average person sick;
But ask him what he ever did,
And he crawls inside and shuts the lid.

The Devil may take the man who knocks,
The man who scoffs and the man who mocks.
He's the man who never lifted a pound,
A skulking, vile, pestiferous hound
Who can only growl and bark and bay,
And get around in the people's way,
When they're trying to do as best they can,
Something to benefit fellow man.

The Devil may take the man who knocks,
May Charon land him upon the rocks
In the deepest, sulphurous bowels of Hell,
Where the Impies sport and the Harpies dwell;
And let him kick to his soul's content,
And there let him knock 'til the air is rent,
'Till the towering pillars of Hell shall fall
And the echoes die on its brazen wall.

Whenever you pray—if pray you do—
Pray for the honest, the brave, the true,
Pray for the noble, the good, the just;
Pray for the righteous—and if you must—
Pray for the serpent, the wolf and the fox—
But the Devil may take the man who knocks.

—W. H. H. MacKellar.

## FEW BUYERS KNEW THIS, BUT IT IS THE LAW AND WOULD HAVE SAVED MANY A GOOD ORDER

(Copyright by Elton J. Buckley)

I regard the subject which the following letter impels me to discuss, as among the most important of all the many legal subjects I have discussed through these articles. Furthermore, I have reason to believe that thousands of good buying contracts have been lost because the buyers did not know what I am about to tell them.

By request I omit all names:

Pittsburgh, Pa.

Last spring we placed an order for 100 cases of ——— with ——— & Bro. Co., New York City. The order was executed on their regular order blank, which contained the following wording: "This contract is made subject to delays in stoppages caused by strikes, accident, delays by railways, crop failures and all other causes beyond this company's control."

The goods were for shipment late May or early June, and at that time the company wrote us that owing to transportation difficulties, labor troubles and so on, they were unable to deliver any of our order. Another house in which we are interested, in Cincinnati, received the same letter, and we apprehend that every other buyer who placed an order about the same time also received one. The New York house regretted they could not fill our order, on the grounds named. Meanwhile the price had advanced about 20 per cent, and we wrote remonstrating against the cancelling of the order, but they simply wrote back another letter practically saying the same thing as the first.

Since that date this house has been taking orders for the same goods at 25 per cent higher prices, which shows that the transportation or labor troubles which prevented them from filling our order and others, have disappeared. Can we compel them to fill our order now?

---

The law in such cases as this is very clear and very firmly settled, viz: that when a seller fails or refuses to deliver because of some obstacle covered by a clause in the contract such as is reproduced above, his obligation to deliver is not cancelled, but only suspended, and he must deliver as soon as he reasonably can after the obstacle has disappeared. That has always been the law, yet thousands of buyers have allowed sellers to cancel orders on them under these conditions, with nothing more than unavailing protest.

And no doubt many a seller has been honestly under the impression that he had a legal right to cancel under such conditions. But he hadn't. Clauses in a selling contract or an order blank relieving a seller, relieve him only for the time being. If his reason for not delivering is a strike, then he must go on with the contract after the strike is over, even if it lasts for six months. If it is freight congestion, he must make and deliver the goods within a reasonable time after the congestion is removed.

The following is from a leading case:

An accident, strike or suspension clause in a contract has the effect of suspending performance only, and never justifies the complete cancelling of the contract, unless such strike, accident, etc., makes the contract impossible of ever being performed.

* * * The case of Fish vs. Hamilton, 112 Fed. 742, was an action for breach of contract. The contract contained a strike provision, and it is insisted that a strike terminated the life of the contract. We concur in the opinion of the court below that the provision affects the terms of delivery only, and that the seller was bound to deliver within a reasonable time after the termination of the strike. Where the contract provides that delivery shall be subject to strike, the existence of a strike merely suspends deliveries during the strike and does not terminate the contract, and the seller is therefore bound to resume deliveries after a reasonable time after the strike has ceased. This rule is well established.

All these cases agree that when somebody has taken a number of orders which he is prevented from filling by some cause noted in the contract, he must, after the cause has disappeared, start in on the old orders and fill them pro rata before he takes any new business. In the case submitted to me, the fact that the seller is out for new orders is of course clear proof that he is no longer prevented from delivering.

But in such a case the seller cannot be compelled to deliver; he can only be made to pay the defrauded buyer the difference between the order price and the market price on the day the seller first became able to deliver but did not. In the case submitted this would be about 25 per cent of the order price.

So that when somebody who has taken your order fails to deliver because of some saving clause in the contract, such as we have been discussing, watch out, and as soon as he comes into the market again go after him; any court will give you judgment for what you have lost.

---

## EXPLAIN THIS TO CUTLERY CUSTOMERS

Wages in the cutlery industry have taken another jump, according to the American Cutlery Bureau of Information. Workers are today paid the highest since the summer of 1914, with a total increase of 176 per cent against prewar figures. Cutlery making, notwithstanding its many industrial improvements, is still essentially an artisan industry requiring the highly skilled operative more than most other industries.

The percentage of wage upon the cost of production in the cutlery industry in fact is unusually high, running in some cases up to 75 per cent of the total value of the manufactured article. Wage advances in the American cutlery industry have generally been more pronounced than those in other countries. In England the average wage addition in the industry has been 150 per cent, with larger additions in the instance of operations where special skill is required.

## THE PROPERLY HUNG DOOR

**Growing Tendency to Use Three Butts to the Door Instead of Two**

The efficiency of an extra butt is no longer a much mooted question. Throughout the country there is a general trend on the part of architects and builders to hang a door on three butts. In fact, to serve this growing demand manufacturers are now packing butts three to a box, constituting a set.

To say that doors are one of the hardest working parts of any building, especially public buildings such as schools, hospitals, theaters, railroad station, is to repeat a fact everyone knows. And, after all, it is the butts that make or mar the door. On them the stress and strain, the wear and tear, is bound to center.

Even the best butts are tested beyond capacity at times. The weight or load of the door is excessive. Green lumber, which often has to be used on the door, results in warping.

Careful analysis of the subject shows that there are many logical and practical reasons why the use of three butts to a door is true economy in the long run.

It has been demonstrated that the third or extra butt will hold the butt edge of the door in alignment and, to a great extent, will prevent the door from warping. Also, it prevents the door from striking or interfering with the door stop, if used (or the edge of the rabbet, if the door jamb is rabbeted) when the door has a tendency to bow or warp toward the door stop or the center of the door jamb.

While it may take more time to put on the extra butt and while the cost is slightly increased, the saving of the carpenter's time and expense later on to correct door faults more than offsets the initial investment.

If a door is hung on two butts only, each butt carries one-half of the load or weight of the door. When a door is hung on three butts, each butt carries only about one-third of the weight, thereby decreasing the strain and wear. More screws are driven into the door jamb and the door, thus relieving the strain on screws, the wood in the door jamb and in the door, which is an important factor.

When three butts are used the top butt can be set nearer the top of the door, thereby lessening the leverage of the door pulling away from the jamb. The lower butt can be set lower, thereby preventing the door hugging the door jamb near the bottom of the door. The top of the door remains in line with the head jamb, and the bottom edge of the door is parallel with edges of threshold.

The binding and sagging of doors are expensive troubles to correct. And it is to the credit of architect and builder that much thought is being given to overcoming of such annoyances by specifying and using "3 butts to a door."

## SOMETHING FOR YOUR STORE PAPER

Many of our subscribers issue store papers or circulars offering useful suggestions to their customers. Accidents from burning happen in every community and here is a suggestion it is well to pass along:

**First Aid for Burns**

Not a very long time ago a child who was scalded met with the misfortune to fall into the hands of a number of persons who knew absolutely nothing whatever about such a situation. The child fell into a bucket of boiling water left where it should not have been left, and was scalded from the lower part of the spine to the knees. The mother was prostrate and could do nothing. The neighbors rushed in to lend a helping hand, and the result was the death of the child one hour after it had reached the hospital.

The child's clothes were pulled off without special precautions, which resulted in added suffering and a quick death.

In the event of any burn or scald it is most essential to keep the skin away from the air, because air is an irritant. Give the person in that condition a hot bath, at least 100 degrees Fahrenheit, and administer such stimulants as black coffee. You may also apply a mustard plaster over the heart. Send for a physician while you administer "first aid."

Remove the clothing very gently and cut away any article if you find it necessary. If the burn is slight and no blisters have formed, the part is to be dressed with a saturated solution of ordinary baking soda or dusted with baking soda, flour or starch and the air absolutely excluded.

You may now pierce the blisters at the edge with a clean needle which you have sterilized by holding it a moment in the flame. Then cover the burned parts with soft linen cloths saturated with boric acid lotion or the boric acid ointment. Now envelop the whole burned or scalded spot in raw cotton, oiled silk or paraffin paper and bandage loosely in order to exclude the aid still more perfectly. Apply hot bottles to portions of the body which have not been burned if the prostration continues. The treatment required after this should be managed by a physician.

If the burn was caused by an acid, wash away the liquid with water, or, what is still better, with a solution of baking soda. The latter is an alkali and neutralizes the effect of the acid very quickly.

If the burn was produced, however, by an alkali such as lye, treat it quickly with vinegar and water.

—Dr. Leonard Hirschberg, John Hopkins University.

## DANGER OF COMPARATIVE PRICE ADVERTISING

The danger arising from the indiscriminate use of comparative prices in retail advertising is stressed in an interesting and effective manner by a report recently issued by the Better Business Bureau of Indianapolis, which is affiliated with the National Vigilance Committee of the Associated Advertising Clubs of the World, says a bulletin from the offices of the latter organizaion, in New York.

**Wrong Education for Customers**

Comparative price advertising is again running riot. Merchants who seldom use comparatives have been using them recently. Others who habitually use them have been even more extravagant in their statements. These range from supposed savings of one-half or more in clothing advertising to $200 dresses for $75.00; $175 tailored suits for $50; $150 coats for $70; $22.50 dresses, $9.50; $15 shoes for $4.49, etc.

We do not hold that the mere use of comparative prices is unethical or wrong. We do maintain, however, that the use of comparative prices and comparative values is subject to great abuse and tends to undermine confidence in advertising, as it tends to educate the public to the belief that a regular price on merchandise carries an exceptionally large profit for the merchant, and that it is not prudent to buy until goods are advertised at a reduction. It tends to educate the public to become bargain-hunters.

The effect upon the buyer is to do exactly what the public suspects, place a high mark-up on his goods that he may advertise them at a reduced price and still make a reasonable profit. The shopper learns to look and wait for a reduced price before purchasing and even then questions whether or not she is getting a real bargain.

The whole tendency of the extreme use of comparatives is, we believe, to destroy confidence in advertising and in the merchant's making extravagant use of comparatives, thereby making it necessary for such merchant to spend ever increasing sums for advertising. In the meantime his department heads are tempted to make ever increasing claims of reductions to stimulate the jaded public appetite for bargains.

The $200 article advertised on sale at $75 may have actually sold at the higher price at the beginning of the season. The merchant is probably taking a considerable loss at the lower price, but it is hard to make the public believe that he is selling goods at an actual loss. We know it is often done and that it is good merchandising to close out broken and unseasonable lines, but the general public does not. The women who paid the higher price earlier in the season believe the merchant profiteered; and the merchcant suffers through loss of confidence and prestige.

## SALES WINDOWS COST HIGHEST RENT

**Your Fault if You Don't Bring Commensurate Results**

Display windows poorly trimmed or "put in" go-as-you-please manner without the proper "punch" to them, are like checks without signatures—worthless.

If you trim your windows "any old way" simply because you want something in the space or trim them with merchandise that you have found slow sellers and unattractive—is penny wise and pound foolish.

You would not do this in your newspaper advertising—no, indeed, you watch that very closely because it is costing you money.

**Unattractive Windows Drive Away Business**

It is a proven fact that you will lose more business by unattractive windows, both present and future, than in any other way.

The prudent hardware merchant knows what his windows are worth to him, he trims them to the best of his ability and in exchange for these attractive window displays his business shows added energy.

Don't let your competitor grow fat in purse while your cash register is idle. Get your share of the business in your town—have the edge on all rival merchants by having window displays that are bound to appeal.

**Windows Should Stop "Passers-by"**

The wide-awake merchant whose display windows fairly reaches out and stops pedestrians is the merchant who gets the business.

The trade of your town doesn't complain about the unattractive appearance of a window—it quietly passes on to a place where an attractive display stops them.

A customer is not always made by an attractive display—but if he is induced to enter your store and your merchandise is good, your service satisfactory and prices fair, this window display has performed its duty true to form.

This is the experience of successful merchants who know.

---

The more I see of rich men and the closer my insight into the workings of their minds and hearts, the more strongly convinced do I become that great wealth is no passport to happiness nor proof of true success.—B. C. Forbes.

---

Sooner or later the profiteers and labor slackers will get their just reward.

---

## NATURAL MODESTY

"All right back there?" called the conductor from the front of the car.

"Hold on," cried a feminine voice. "Wait until I get my clothes on."

The entire carful turned and craned their necks expectantly. A girl got on with a basket of laundry.

## STILL PUTTING IT OVER ON THE BUYER

(Copyright by Elton J. Buckley)

Additional cases have come to me which justify the assertion that there is a rather widespread effort being made, in all lines of business where future orders are taken, to put things over on the buyer. By no means all sellers of future orders are implicated in this. No doubt the majority are honest enough to fill their future orders, no matter how much more they could get for the goods on spot, but enough sellers are doing it to warrant me in again issuing a warning to buyers. The scheme takes the form of excuses of one kind or another, to postpone filling or avoid filling altogether, future orders for goods which can be sold for more money on today's market.

One case comes to me from a Wisconsin retailer who placed a future order for oil stoves. Here is his letter:

> We bought a quantity of oil stoves from the "——" Vapor Stove Co., half to be sent at once and the balance June 1, 1920. By buying ten stoves we got 30 and 5 off list, while if we had only bought five we could have merely gotten 30 per cent.
>
> We are inclosing copy of order as given us by their agent, also correspondence we have had later. We claim that they accepted the full order at prices named in order because they sent the first part of it at 30 and 5, and that we can therefore hold them to their contract. Are we right and how should we proceed further in the matter?
>
> We have sold nearly all of the stoves on their first shipment and have more promised at the old price to our customers out of the lot we expect to get June 1st, which would put us in bad to ask customers the big advance.
>
> We did not at any time get any notice of price reservation clause they claim in their letter of February 13th.
>
> You will notice the copy of June 1st order reads "Not subject to cancellation."
>
> They sent first shipment on and we paid them and they did not mention anything about the future order.
>
> S. BROS.

In this case the order for ten stoves was placed December 20, 1919, five for shipment February 1st and the balance June 1, 1920.

The June order is marked "Not subject to cancellation," which, of course, applies to the seller just as to the buyer.

The first half of the order was shipped February 1st at the contract price, but around February 14th the seller sent the buyer a letter in which he said: "For the first time in twenty-five years it becomes necessary for us to take advantage of the price reservation clause in our booked orders." There was some talk about advanced prices for materials, and this: "All orders in our files calling for shipment March 1st or earlier will be filled at the old prices. You have an order in our files for shipment later than March 1st. * * * The prompt return of the inclosed card will mean that your order will be given shipping preference and we shall endeavor to protect you against further price advances in so far as it is possible to do so. * * * For our own protection we must say that prices are subject to change without notice."

Accompanying this was a printed card reading in part, "All orders for future delivery are subject to prices in effect at the time of shipment." Also a postal card to be mailed back to the seller containing these words: "We (meaning the buyer) understand that your new list prices effective February 14th are to apply on these orders." The prices of February 14th were about 10 per cent higher than the contract price.

There was nothing on the order blanks in this case giving the seller any right to change the price, or to make the price conform with the market price on the day of shipment. Nowhere in the transaction was there any "price reservation" or any qualification whatever of the order. The seller is therefore making a deliberate effort to put something over on the buyer. In an attempt to justify himself, he writes the buyer several letters, but none of them even touches the point. All merely discuss the advance in materials, but make no argument whatever why the contract should not be carried out.

In this case, as in most of them, the buyer's course is clear. He should notify the seller at once that he refuses to pay any advance, that he demands delivery, and that if he doesn't get it at the proper time he will buy similar merchandise in the open market and sue for the difference in price. If the seller is properly advised he will deliver.

The other case comes to me also from the far West, and is from a furniture dealer, who writes as follows:

> Have just enjoyed reading your article and am today sending the clipping of it to the Acme Furniture Co., whose letter I am inclosing to you. We have not confirmed the new price on the buffet in question. Would rather go without it than pay the price. No doubt the delay in filling the order was caused by the filling of other orders for same goods at an advanced price.
>
> When prices begin to decline, as they will do some day, am thinking the retailer will have a chance to "get even" by cancelling orders, but will factories stand for it, we wonder?
>
> GRAPP FURNITURE AND U. CO.

The letter inclosed indicated that the Acme Furniture Co. accepted an order for a buffet at $31.75, but did not deliver. Finally, when pressed to, it wrote as follows:

> The prevailing prices on pieces which we now have in stock, ready for shipment in a few days, are as follows:
>
> No. 675 G. O. Wax Buffet—$66
>
> We are being pressed very hard for shipments and our stock of the above pieces is very limited. Will therefore ask that we be favored with your confirmation of the above price by return mail.

In this case the price now asked is more than double the order price. Well, my advice to this correspondent is the same as to the other—if he has a clear contract for the delivery of this buffet at $31.75 he can demand delivery of it at that price, and if he doesn't get it, he can go out and buy a similar one and collect the difference from the Acme Furniture Co.

## WHEN YOU WRITE A BUSINESS LETTER

First, have clearly in your mind the exact message which you wish to deliver through your letter.

Second, avoid being ambiguous or hazy in your statements. Keep in mind the thought that you positively must make what you are saying crystal clear to the person whom you are addressing.

Third, avoid long letters. They give the business man a chill just to look at them.

Fourth, avoid big words or unfamiliar words or terms.

Fifth, cultivate the art of saying much in a few sentences.

Sixth, use one idea only to a paragraph, and make the paragraphing short.

Seventh, all paragraphing ideas should be contributory to the main letter idea—a mere development of the main message.

Eighth, talk straight to the person to whom you are writing, just as though you were addressing him.

Ninth, come to the point of your letter at once in the very opening. Don't waste the time of the other person or your own.

Tenth, make the tone of your letter friendly, without being fresh or forward. Hold fast, to give the message which you set out to deliver, so that your reader's attention will not wander.

Eleventh, never misrepresent or mislead in any way.

Twelfth, if you would sell goods or service through the good offices of your letter, show "just where" and "how," the other party will be benefited. It is his own interest he is looking for, not for yours.

Thirteenth, draw a mental picture through the magic of words, of just what you want your prospect to do, and make strong, cheerful suggestion that he do it.

Fourteenth, be brief, tactful, and when you have come to the end, stop.

---

The man who can't make his mind up is not likely to make much else.

---

In the end we usually get just about what we deserve. Sometimes we get it where we deserve it—in the neck.

---

## THE FINGER TEST

An Irishwoman of County Clare was blessed with twins, two dear little boys, so exactly alike that visitors could not tell the difference between them. But the mother knew—ah! those mothers, what a lot they know!

"One of them," she said, "has a little way of his own of biting, so when I want to be sure which is which I put my finger in Mike's mouth, and if he bites I know he's Patrick. I can always tell."

## "RE-BUILD YOUR FACE"

The fellow who sits around all day, and wonders why business don't come his way, is always the bird that crabs the most, and wears a face like a belated ghost. If it don't rain enough he throws up his hands and lets his business blow with the sands. If it rains too much he says he's done and tells all the drummers, "Why, business—there's none." When winter comes and the snow starts to fly, you'd think this bird about to die, for he tells his friends that it came too soon, and swept off his business like a new broom. All season long he sits 'round the stove, cussing conditions and planning to rove. Then along comes spring weather and a lot of good days, but to him there's no business, because he always, looks at the past and just knows this good weather ain't goin' to last. Are you like the bird who never sees light and thinks that hard luck is his day and night? Why cuss the weather and luck and such, when it's so much nicer to throw in the clutch and pull up the hill with a smile on your face, knowing that you are setting a pace, for the down trodden fellow who worries and frets because the Almighty always sets a time for each rain, each wind and each snow, regardless of business, for we all know, there's a reason for droughts and too much rain. Why not set the sails for the strain? If this world don't suit, there's surely another world made for such crabs as our sullen brother. Up on your toes, hold your head high; don't meet your trade with a pitiful sigh. Business is run on the American Plan, it's there for you, so get all you can. Don't cry about failures, no money, and such, just plant a big smile where it shows all the time, and you and your business will sure head the line.

—H. G. Gill, with Coleman Lamp Co., Dallas.

## MEN AND DOGS

A friend may smile and bid you hail,
Yet wish you with the devil ;
But when a good dog wags its tail,
You know he's on the level.

---

## SCHWAB ON GREATNESS

"When I hear myself being praised, I tell this story to bring me to a realization of what every true man ought to feel," says Charles M. Schwab.

"I was going home from the mills at Homestead about thirty years ago. I was manager there, and a manager in a steel town is a pretty big fellow. Being young, I was puffed up. I was seated in my buggy with my negro servant, Bob, preparing to go home, when a workingman's wife and little girl came by.

" 'Look, dear,' I heard the woman say to the child. 'That is Mr. Schwab.'

"The child looked quickly and asked:

" 'Which one?' "

## A NEW WORD AND A NEW IDEA ADDED TO BUSINESS

(By Bruce Barton)

A great word has been added to the vocabulary of business in recent years. It is being overworked, as all new words are. We shall doubtless become very tired of it, as we have become tired of "psychology," "efficiency," "merchandising" and other overworked words. But the idea that the word represents has come to stay.

The word itself is Service.

I was in the office of the general manager of a great corporation recently. The business he manages has departments in almost every large city. It is a business that has unquestionably been of enormous benefit to the people of America, and has — incidentally — made millions for its founder.

The general manager read me a letter from the "Old Man." I obtained permission to copy four paragraphs.

### A Millionaire's Creed

Here they are. What do you think of them as the confession of faith of a millionaire?

"I can honestly say that I have never worked at the business for profit as the main motive.

"My profits have been incidental, though absolutely necessary.

"I have always conducted my business solely for the purpose of what I considered 'public service.'

"Had I conducted my business for the purpose of making profit, I might have made as much money as I have made, although I doubt it. I am sure that I would not have made any more. I am pretty sure that I would not have made a quarter as much."

### A Hotel Man's Basic Rules

I know a man who has grown rich by building and operating great hotels.

I slept in one of his hotels the other night, and in the morning I dropped into my pocket a copy of his book of instructions to his employes. Here are some quotations from that book:

" A hotel has just one thing to sell.

"That one thing is service.

"The hotel that sells poor service is a poor hotel.

"The hotel that sells good service is a good hotel.

"It is the object of this hotel to sell its guests the very best service in the world.

"The service of a hotel is not a thing supplied by any single individual. It is not special attention to any one guest.

"Hotel service means the limit of courteous, efficient attention from each particular employe to each particular guest.

"This is the kind of service the guest pays for when he pays his bill—whether it is for $2 or $20 a day. It is the kind of service he is entitled to, and he need not and should not pay any more."

### Dreams of Service Which Have Come True

It is interesting to note how, in the course of time, the practical men of the world finally come around to the point of view of the world's dreamers.

Napoleon, the practical man, refused to see the dreamer Fulton, with his absurd claim that he could make a boat run against tide and wind.

But today all practical men pay tacit tribute to that dreamer.

For two thousand years practical men have looked with a sort of tolerance on the teachings of a certain Carpenter of Nazareth. What He said was very good, of course, but utterly impractical.

Yet the service idea, which is the big new idea in modern business, was first discovered by that Carpenter:

"Whosoever will be great among you, let him be your minister; and whosoever will be chief among you, let him be your servant."

It is the one solid, practical rule for building a business or a business career.

If you want to know how far you will go in business, take account of stock; find out how much service you are equipped to perform.

If you want to figure what you are likely to get, first figure what you have to give.

---

## TAXES OF THE TIMES

An American moving picture company offered George Bernard Shaw one million dollars for the right to produce his plays on the movie screen.

It seemed like a handsome offer. After thinking it over Mr. Shaw refused it. Asked why, he said, "I can't afford it." This was thought to be one of his subtle jokes. But Shaw explained that he was perfectly serious. "I can't afford it," he repeated. "I should be $17,000 out of pocket."

He found that the U. S. Federal income tax on that million dollars, plus the State of New York's income tax on the same sum, plus the British income tax, would amount to about $1,017,000, leaving the author literally $17,000 "out of pocket" besides having parted with his plays for nothing.

---

## MISPLACED THE "T"

"We wish to apologize to Mrs. Claire Mead," writes an editor. "In our paper last week we gave an account of Mrs. Mead's tea at her house, and, of course, as French is quite the thing nowadays, we spoke of it as a 'fete.' Unfortunately, the compositor, whose knowledge of French is both general and specific, set and printed the line as "Mrs. Claire Mead's Big Feet."

# Toys in Hardware Stores

## Makes Opportunities for New Trade Every Day in the Year

MANY a child has thought of Santa Claus as the embodiment of all that is good, true and beautiful—Santa Claus is not only the patron saint of children, but many a full grown man, in his private life, his personal affairs, he too can embody the generous, hearty, jovial, free and loving spirit of Santa Claus, the idol of the Christmas season.

As the prevailing patron saint of Christmas and that of the gifts that come at this time, Santa Claus represents the spirit of the season. To the children, however, Santa Claus is the donor of toys.

K. M. Hayden, western representative of the H. C. White Co., is the distributor of the Kiddie Kars throughout the West, although Mr. Hayden's dealings are with hardware jobbers and with toy jobbers, railroad companies in securing shipments, yet nevertheless his spirit has not yet been dampened by too many recurrences of the Christmas season. Toys should be distributed by one that enters into the spirit of the goods and the spirit of the season.

This year thousands of Kiddie Kars will be shipped west, to gladden many a child's heart, and Mr. Hayden may feel with pride that he has been instrumental in distributing them, although he cannot deliver them in the midst of tinkling bells and falling snowflakes.

Mr. Hayden was formerly a New Englander, having founded his business career in Boston, in the stationery business. For many years he was connected with the harness hardware trade as a manufacturers' representative, this affording him a larger field to work in.

At the present time he is interested in Kiddie Kars, although he handles a side line of collapsible tools, which he sells to the trade and to manufacturers.

### Toys for the Christmas Season

This is the time when foresighted, progressive merchants in the hardware line are featuring especially their toy stock. This article by Mr. Hayden, representative for the H. C. White Company, suggested the advisability of the possibilities of carrying toys in their stock, not only at Christmas time, but all the year around.

However, for the merchant that has not tried toys before, Christmas is the time to introduce them. For the sales are not only in toys, but in other lines to customers who come in for toys.

Every month we hear of new merchants who have taken up the sale of toys, and they rejoice in their decision. We cannot emphasize the possibilities in this line too strongly and we can recommend Mr. Hayden's articles to every merchant for careful reading and studying.

How many hardware merchants are satisfied with the amount of business they are doing? Not many. A satisfied dealer is not progressive, but the spirit of progress and enterprise creates a hunger after more business, resulting in expansion and improvement and naturally adding new lines of such goods that fit well among the already established building material and household goods.

Take for example the old fashioned drug store, of which we find one here and there, carrying simply drugs and medicines, with a little soap, cough drops, combs and brushes, doing a business that scarcely allows the owner enough profit to pay his expenses and the barest kind of a living, and compare such places with the progressive drug store of today, some of the more enterprising approaching the proportions of a department store.

Toys are ignored by many hardware merchants, more through ignorance of the great demand and volume of business to be done, but those who have given the subject the thought necessary to grasp the situation, and have acted wisely in selecting enough merchandise in toys and wheel goods to give the matter a proper showing, have been more than surprised at the possibilities.

There are the various lines of steel and wooden construction materials for boys, produced by many factories and shipped out to the jobbers in carload quantities. These are wonderful toys for fascinating, amusing and developing the boys' minds, teaching them to create a thousand and one things useful and instructive. Blocks and games that teach the letters, geography, travel and mathematics.

Wheel goods in wagons, coasters, Kiddie Kars and skooters are found in infinite variety for all ages, and the volume of business that is done in these things on wheels is simply astonishing. Why, in one little three-wheel affair for kiddies there are many large department stores in the United States that purchase them in carloads.

Why should the hardware dealer overlook such opportunities to enlarge his business and add to his bank account? With a good display of these staple playthings, he will find new faces coming into the store every day, who otherwise pass by year in and year out without ever darkening the doors. Every family in the community is a purchaser of these items, and don't forget that they buy other articles as well once they find the way across the threshold. There is a good volume of trade in toys all the year round, but as every hardware merchant knows, the month of December is a dull month in his staple lines, and here is the opportunity to make a fine and profitable cleanup in that month.

I know of one hardware store in Seattle that started this proposition of carrying toys years ago, and their business in playthings runs far above the $100,000 mark per year, all because they were not satisfied with confining themselves to a few limited lines, but were hungry for more and went right after it.

---

After an extensive eastern trip, on which he visited all the eastern cities in Canada and the United States, W. N. Luby, prominent hardware man of Wapato, Washington, reports that he finds merchants everywhere optimistic, looking for an active business year.

---

The United Implement & Hardware Company has been incorporated at Dinuba, California, with a capital stock of $50,000. The incorporators are W. F. Day, D. C. Amsden and J. R. Clotfelter.

---

The Wendt-Dehler Hardware Co., Spencer, South Dakota, is erecting a new building to hold its constantly growing stock.

---

When a customer seems extra grouchy, even up the party by being extra kindly yourself. Patience and good nature is a tremendous asset in salesmanship.

---

The true measure of a man's success is the service which he renders, not the pay he exacts for it. The true measure of a man's ability is the power to help others and contribute to their advancement.

—President Hadley of Yale University.

## OSGOOD MURDOCK WEDDED

It is not often given to us to write of the happy culmination of a romance in connection with a member of the HARDWARE WORLD staff.

While it is a violition of an unwritten, yet nevertheless a well understood, rule of journalism, which in this present day of personal exploitation is manifested more often in the breach, than in the observance of it, yet we shall for this once trespass upon the policy of our editors, and in view of the occasion introduce to our thousands of readers Osgood Murdock, one of our valued associates and co-workers.

The wedding of Mr. Murdock and Miss Doris McLoughlin occurred the fore part of October. Since Mr. Murdock is at present on his honeymoon, we do not have the oppertunity of obtaining a snapshot of him or furnishing our readers with a photograph other than that taken when he was lieutenant in the artillery during the war.

It needs no stretch of the imagination, judging by this photo, taken while under stern military duties, to reveal the fact that even then his countenance would indicate such an object was in contemplation. In fact the romance dates back to school and college days, when they were in attendance at the same institution of learning.

Completing his university course he volunteered for service and upon his discharge became identified with the HARDWARE WORLD as associate editor, in which capacity he has been for almost two years.

We have always counted ourselves fortunate to have as associates men and women of splendid ideals and character who believe in the sanctity of the home. In recent years we have seen both by precept and example, among public men, a spirit that apparently gives too little consideration for affection or true regard for the wedded life, and it must depend upon the youth of America who have had the proper environment and home training to uphold those fine ideals and standards, without which any people will become decadent.

The home has well becn said to be the safeguard and bulwark of America, and associated with the HARDWARE WORLD are those that truly typify what America is and must remain.

That Mr. and Mrs. Murdock will establish such a home, that it will become the expression of that ideal that represents the finest and truest of American life, is taken for granted by everyone who knows them.

We know our large family of readers will unite in every good wish for this happy and deserving young couple.

## BEWARE OF INDOLENCE

Just as "familiarity breeds contempt" so does success tend to breed indolence. Business which has been painfully built up to a position of importance will not necessarily continue to be successful, particularly at this time in the world's affairs, when conditions are changing from day to day.

Currents and cross currents are affecting trade. What we build today may be out of date tomorrow. It behooves the merchant therefore to look to his business just as closely as ever, for although the physical war has ended, the commercial war has begun and the battlefield of trade requires just as much presence of mind and resource as did that in France.

Those who realize this fact and make themselves valuable additions to the force will profit by their foresightedness. It takes mental effort to understand the trend of affairs and farsightedness to keep in the van, but that merchant is indeed fortunate who numbers on his staff dependable, steady workers who do not consider it too much of an imposition to ask them to use their heads as well as their hands.

Because business has come to the store unsolicited when conditions were different and in fact has been turned away because of lack of stock, does not mean that the entire force can now sit down and fold their hands, waiting for trade which must come back.

While the war forced some to the wall, it led others to success with very little effort on their own part and it is these in particular who are liable to have the idea that success is their natural birthright and they need not make any effort to hold it.

Get rid of that idea. The most prominent men of the day are constantly striving to retain what they have gained and to progress a little further. One must either go forward or back. There is no standing still and the indolent "drone" is superfluous.

---

Enthusiasm overcomes despondency and generates hope, self-confidence and courage. Enthusiasm stirs up your liver and puts it to work, thereby helping it carry on its vital function of cleansing your blood.

---

It's all right to aspire to control others, but have you begun with Number One?

---

The most valuable "system" is a good nervous system.

---

## PROOF OF IT

He—"I don't think I'd like to marry any girl unless I knew she was self-sacrificing."

She—"But wouldn't marrying you prove that she was?"

# Make Him Your Ad Man

Here's your opportunity to put the livest retail advertising manager in America at work *in the interests of your store.* His year's advertising campaign is already *written,* his plans are *fully made,* he's ready to get on the job *any time!*

Who is he? *Frank Farrington*—retailer, advertising expert, convincing writer of sales copy. He's condensed his whole campaign complete in a series of *50 remarkable letters* that are all ready for you to use. Every one of them is full of human interest and live, interesting sales points about the leading lines you carry.

Frank Farrington's service and advice as you get it in this set of letters is easily worth $500 to any live retail store. We have conservatively put the price at $100.00—$2.00 a letter—but these letters are *not for sale.*

The complete set with a preface of *sales hints, contest ideas,* and suggestions on *compiling and keeping mailing lists* was written by Farrington at our request to make direct mail advertising easier and *more valuable* for the Multigraph user. The letters are given FREE with each Multigraph retail equipment.

If you want to get rid of "shelf loafers"—if you want your stock to turn over at dizzy speeds—if you want to see your store *grow* to the size it ought to be—*you'll want details about the Multigraph* and the *50 Farrington letters.* The coupon will bring them in a hurry—if you mail it that way.

**THE AMERICAN MULTIGRAPH SALES CO.,**
**1013 East 40th Street, Corner Kelley Avenue**
**Cleveland, Ohio**

**Multigraph Senior** Just the machine for turning out the Farrington letters, for printing labels, folders, booklets, stationery, and the like, and for imprinting manufacturers' literature. An efficient, compact, reliable duplicating device. It does form typewriting and office printing and produces high quality work, adequate for the average business.

**Flexo-Typesetter** It sets real type for genuine printing from printers' ink. Any bright employee can learn to use it, and with a little practice can do the job of typesetting swiftly and *surprisingly well.* The device is light, compact and strong. It not only simplifies the *setting* of the type, but provides for keeping the type in such a way that it is always ready when wanted.

**The American Multigraph Sales Co.,**
**1013 East 40th Street, Cleveland, Ohio.**

Gentlemen:

Please tell me how I can build business with the 50 Farrington letters and the Multigraph.

Name.....

Street.....

Town.....State.....

Hdwe. Wld.—Nov.

# Let Your Goods Do Some of the Selling

A man was buying a flashlamp in an electric shop. Behind the counter the salesman found out which kind the customer wanted, and as he turned to wrap it up he carelessly dropped a small round object on the plate-glass counter top. The customer picked it up curiously.

"What's this for?" he wanted to know.

"Oh, that?" said the clerk. "Why, that's a radium thingumbob to show you where your pull-chain is at night. You just hang it on the chain and the radium glows in the dark."

"Guess I need one of those," concluded the customer. And the little ball had sold itself.

**"Let the Customer Handle th. Goods"**

"Let the customer handle the goods," seems to be the motto that works wear and tear on the cash register bell. When a man picks up an object his ability to think of it as a some-time possession of his own becomes keen. He has, whether he knows it or not, a partly formed mental picture of himself owning the thing he is handling. That's why goods will help sell themselves.

When asked for his secret, a very successful automobile salesman showed his belief in the same principle.

"I get a customer out on a nice road and then let him slide in behind the wheel," he explained. "Then he has the goods in his hand and I can get him thinking how it will feel to own it."

So leave a few articles out on your counter and give them a chance to do a little selling on their own hook. The seconds a customer waits for the salesman to come to him can be made valuable.

In towns where there is an interurban trolley line it is a good scheme to frame the time-table and hang it up in the central part of the shop, a few self-sellers may be grouped around it, so that our friend the customer cannot miss them.

Another scheme along this line is a Women's Club bulletin board, on which all the women's activities for the city are listed a week in advance. And of course the board is hung over a table of the very latest and most attractive of domestic electrical friends.

Women like to find out how things work. It has been considered funny to throw oral and literary rocks at their lack of mechanical knowledge for so long, that they react surprisingly to the opposite attitude. Assume that they do know about the usual electrical things for the home.

And then when you get an electric iron with a kippy little grip-switch that snaps the juice on and off in a newer and easier way, put a sample of it out on your self-sale table.

Put a sign over it like this:

> JUST TRY IT!
>
> This is the new grip-switch iron you've heard about. Just try it for yourself and see how natural it feels.

There's a dealer in Ohio who keeps a "Try-It" table with a new appliance to try each week; and there is usually an interested group of try-ers around! People have formed the habit of stopping in to see what is new in that store each week. The manager ties it in with his newspaper advertising so that it is subtly insinuated that one really can't be considered up-to-date if one doesn't drop in the Electric Shop at least once a week to see what's new in the line of appliance kinks.

---

## AN UNPLEASANT STATE OF AFFAIRS

Unpleasant my lot and heart-breaking my lot;
I'm under a terrible strain;
For the weather is cold when I think 'twill be hot,
And it's dry when I think it will rain.
When I think it will rain, it is horribly dry:
Now where is the mental defect
Which makes me like that? I would like to know why
Things never do what I expect!

How often I notice with envious eyes
The sudden ascent of a stock,
And, thinking it's sure to continue to rise,
Invest with all speed in a block;
Whereat the said stock tumbles down with a crash,
My hopes and my profits are wrecked,
And I am divested of most of my cash—
Things never do what I expect!

When, once in a while, a stock that I own
Reluctantly starts to ascend,
I constantly fear lest it drop like a stone
And give me no profits to spend;
And so I sell out when it's up three or four,
But ere I have time to collect,
I see it go leaping up twenty points more!
Things never do what I expect!

You'd think, when my judgment advises a move,
That I'd move in the opposite way?
I've tried it, my friends; but such facts only prove
That I always move wrong, as I say.
I'm not even right when I think that I'm wrong;
All thoughts I am moved to reject;
For though I may figure for ever so long,
Things never do what I expect!

—Kenneth Roberts in Judge.

*The Quality Plug*

# 4,000,000 Additional Sales Makers Working for YOU!

THESE two full page advertisements, appearing in the Saturday Evening Post of November 6th and December 4th, bring the total number of selling impressions on the Benjamin No. 92 Two-Way Plug up to *One Hundred and Forty One Millions* for 1920 alone. Think of it!

These two full pages in the Post and the four color page in Butterick Fashion Quarterly will register in two months 5,000,000 selling messages *additional* to the 136,000,000 originally planned for this year, about which you have already been told.

These messages go *everywhere*. Dealers everywhere are cashing in on these sales makers. This is the kind of selling co-operation that dealers appreciate. Dealers are giving co-operation which *we* appreciate. The Benjamin No. 92 Two-Way Plug is going stronger every day. It is a source of profit you cannot afford to overlook.

Get ready! Display the Benjamin Two-Way Plug prominently. We tell them why "Every Wired Home Needs Three or More." You sell them three for $3.50 in the handy three-in-one carton, or $1.25 each. *Your* efforts are worth while, and the Benjamin No. 92, the *Original* Two-Way Plug, brings consumer satisfaction. Order your supply from your jobber now—today!

*Write the Advertising Department, 806 W. Washington Blvd., Chicago*

## WOMEN FRIENDS THROUGH ELECTRICAL GOODS

If you want to befriend the women of your community, show her how she can save time, save labor, and make her home more comfortable and convenient with electrical appliances.

Show her that it is not necessary to spend three hours a day washing dishes when she has an electric dish washing machine. Show her that she can finish her Monday's washing by 9 o'clock with an electric washer. Emphasize the beautiful effects, the soft light and the clean, sanitary fixtures which modern electric lighting provides.

Percolators and toasters cannot be neglected, for they embellish and make easy the breakfast, luncheon and tea. An electrical chafing dish comes at the other end of the day, and is convenient for the after-the-theatre or evening social supper.

Of course the electric iron goes without saying, for nearly every home has this convenience. Other home appliances that have found favor and a ready market with hardware and electrical dealers are electric power sewing machines, electric vibrators and even electric phonographs.

We realize that even though electrical contracting and the installing of electrical wiring is strictly a man's profession, the buying of the appliances is the part of the woman. It is to the women buyers that the successful merchant must make his appeal in selling electrical appliances.

## THE SHIRKER

He toils with one eye on the clock
And notes the minutes swiftly fleeting,
And so he always leads the flock
That throngs the door at quitting.

He hates the starting whistle's chime
That sounds of work and calls him to it,
And never labors over time
Unless he knows he's paid to do it.

Square dealing as a working plan
Is so old-fashioned he would spurn it:
His motto reads, "Get all you can
But give the least you must to earn it."

If he should chance to find a leak
With profits daily wasting thru it,
He probably would scorn to speak
Because he isn't paid to do it.

He loafs along from day to day,
Contented with his low position,
Since drawing his meager pay
Is quite the height of his ambition.

The thing that might be called his brain
Has gone to seed, if he but knew it,
For he avoids all mental strain
Because he isn't paid to do it.

## ELECTRIC GOODS FIT IN HARDWARE STOCK

(By G. E. Garland, Townley Metal & Hardware Co., Kansas City)

One of the principal reasons why hardware stores should carry electrical appliances and squipment, in my mind, is the fact that the hardware line is more or less a mechanical proposition and for merchandise of this kind the people rather look to the hardware merchant as the source of supply for merchandise of this kind.

Electrical household specialties, fans and small motors, and various items that go to the farm that are electrically driven, are being taken on by the wholesale hardware jobbers and sold to the retail hardware dealers for distribution in their community. We find that we are gradually adding item by item until no doubt will have an electrical department, and this in a short time.

The hardware jobbers' methods of distribution affords opportunity to hardware dealers and general store dealers to push whatever they want in the various lines the hardware jobber handles. It is not hard to make up a shipment, as if each line were a specialty in itself. A great many items that are now carried by the retail dealer throughout the country would not be bought if they were only presented to him occasionally. We see it as one of the coming lines in the hardware jobbers' stock.

## "CUSTOMER FIRST"

A very successful small-town store has the following rule in successful operation:

"Customer First." No matter what a clerk may be doing, other than waiting upon another customer, he must drop whatever else he is doing and wait upon the customer.

You might say that all stores have that unwritten rule—but do they? Or is it carried out?

It's needless to add that customers like that "Customer First" service.

## COURAGE

Courage! What if the snows are deep,
And what if the hills are long and steep,
And the days are short and the nights are long,
And the good are weak and the bad are strong.
Courage! The snow is a field of play,
And the longest hill has a well-worn way.
There are songs that shorten the longest night,
There's a day when wrong shall be ruled by right.
So courage! Courage! 'Tis never so far
From a plodded path to a shining star.

Enthusiasm is the spark which touches off that dormant power which is housed in your brain and puts it into action.

## IF YOU ARE A PARTNER, OR CONTEMPLATE BECOMING ONE, READ THIS

(Copyright by Elton J. Buckley)

One of the most curious, and in a sense intricate, things known to the law is the relation of partnership. Partnership law holds all sorts of traps and pitfalls for the unwary, and a very large percentage of those who enter into it appear to be "unwary."

In a former article I have pointed out the fact that one of the traps in partnership was that the relation of partner, and liability as a partner, can be created by actions alone and really against the will and intent of the party whom the law later says must be held responsible.

A case has just been decided which shows that the converse of that is also true, and that a man who allows another to hold himself out as his partner may actually have to give up an interest in the firm to that other just because he allowed the claim of partnership to be made.

The case referred to arose in Pennsylvania and is typical of many others which have arisen all over the county. Levi M. Paul and George Heebner were partners in a retail mercantile business under the firm name of Heebner & Paul. Paul withdrew, took his capital out, and started in business for himself under his own name. Later there was some reason to believe that he might have to stand good for some of the debts of Heebner & Paul, and he conceived what he doubtless believed was a very clever idea. He organized a "partnership" with himself, his son Howard and his daughter Sarah, filing the usual certificate giving himself one-fifth interest and Howard and Sarah two-fifths each. The fact was, as developed later, that the whole thing was a fake, that Levi was and continued to be the sole owner of the business, and that the children were simply put in "to make it hard," so to speak. In fact, it was admitted when the thing got into court, that the only reason for organizing the partnership at all was "for the purpose of protecting the property of Levi M. Paul from possible liability for the debts of Heebner & Paul."

The "partners" had a falling out, and Howard, in spite of all the above, demanded his interest in the firm, and asked for an accounting and dissolution of the partnership. His father and sister came forward and defended on the ground that Howard had no interest in the firm, and that the whole thing was done for the purpose I have described above. The court turned the thing inside out and found as a fact that

a partnership was not intended in good faith to be formed between the parties, and that plaintiff (Howard) was aware he was without actual interest in the business or its assets, and at no time asserted an interest until August, 1917, following a dispute which arose between him and his father.

But in spite of all that, the court said, "you must give him his two-fifths, because you joined with him in a conspiracy to defraud the creditors of Heebner & Paul, and the law will not help you out of the entanglement which you created in the course of that fraudulent purpose."

I quote the following from the decision:

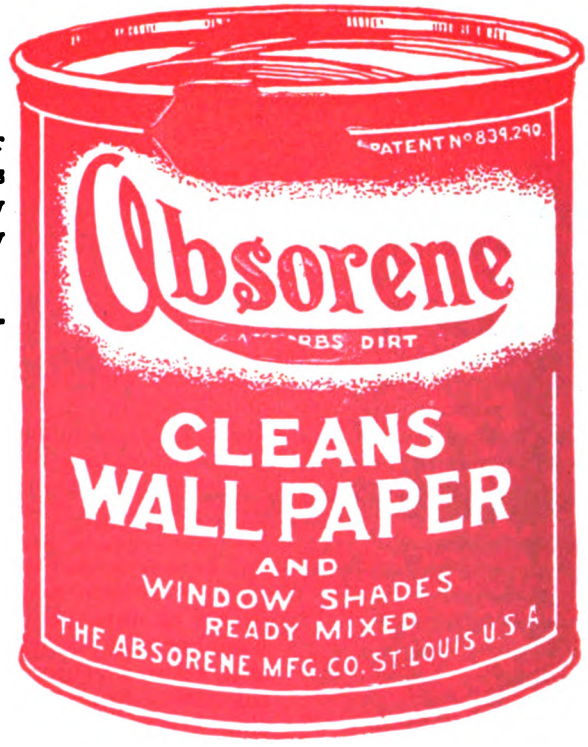
A voluntary conveyance made or contract entered into for the purpose of defrauding creditors, though void as to them, is binding upon the parties. This rule is based upon the theory that, the contract being for an illegal purpose, the law will leave the parties where it finds them, and as between themselves they will not be permitted to set up their fraudulent act to avoid their obligations under its terms. In applying this rule, the test is, whether the plaintiff required the aid of an illegal transaction to establish his case, and if he cannot prove his case without showing he has broken the law or participated in a fraudulent transaction, the court will not assist him. The rule applied in this case operates to prevent defendants from setting up as a defense the fact that the stipulation was filed of record for an illegal purpose.

So Howard got nearly half of his father's business, and doubtless had to be bought off by the father, or continued to be a sharp thorn in his flesh. Readers hereof will be quick to note that Howard, an admitted conspirator for a fraudulent purpose, got the big end of the stick. In other words, while the others were penalized for their share in the fraud, he was rewarded. It seems that way, but not by any design of the laws, which pays no attention to parties, but to principles. The first party who comes into court and asks help that he may extricate himself from the muss his fraud has gotten him into, is always the one who loses, because the court will have nothing to do with it. Naturally the other man benefits by that attitude, because it leaves him with his ill-gotten gains in his hand.

The case emphasizes again the extreme care with which business men should go into partnership, or into any relation which could be construed into partnership, with all of its attendant risks and liabilities.

---

## OLD STYLE PEP



In Montana a railway bridge had been destroyed by fire, and it was necessary to replace it. The bridge engineer and his staff were ordered in haste to the place. Two days later came the superintendent of the division. Alighting from his private car, he encountered the old master bridgebuilder.

"Bill," said the superintendent—and the words quivered with energy—"I want this job rushed. Every hour's delay costs the company money. Have you got the engineer's plans for the new bridge?"

"I don't know," said the bridge builder, "whether the engineer has the picture drawed yet or not, but the bridge is up and the trains is passin' over it."

## THE DIFFERENCE BETWEEN A SALESMAN AND A WRAPPER BOY

A man presents himself in front of the counter in a paint store.

"Gimme thirteen gallons of light yellow paint and four gallons of white paint."

"Righto," says the wrapper boy as he hands out the goods and names the price.

But a salesman—what does he do?

"I judge from the colors, you're going to paint the house," he observes. "Good idea; can't afford to have any wood or metal work on buildings going to decay nowadays; costs too much to replace them, eh? But haven't you some gutters on that house that would be saved from rust by a coat of special rust inhibitive paint?"

"By Gosh," replies the customer, "I forgot that. Glad you mentioned it. Gimme enough of that for about sixty feet of eaves troughs."

"Any fence around your house, friend?" inquires the salesman. The wrapper boy doesn't know where there is any such thing as a fence.

"Yes—why?"

"Well, you know," volunteers the salesman, "that house isn't going to look as well as it should with a shabby old fence around it. You wouldn't put a nice new picture in an old battered, dingy frame, would you? Besides, fences and gate posts decay, too, if not protected by paint."

"Guess that's right, too," agrees the customer. "I have about two hundred feet of fence. What color d'yu think would look good with that yellow house with white trim, and how much will it take?"

The salesman figures it up, suggests the color and sells the goods. The wrapper boy would have saved himself all this trouble and had time for another cigarette out in front.

"Got enough for your out-buildings?" asks the salesman, "or haven't you any?"

"Um, yes I have a detached summer kitchen and woodshed," says the customer, "but I wasn't calculating on spending any money on that."

"Looks pretty good as she is, eh?" remarks the salesman.

"No, don't look any too good, but, er—say, I guess what you said about that shabby fence and the old picture frame goes for that shack, too. It's one story, tin roof, about 12x16. Might as well do this job right. Gimme enough more yellow and white paint for the walls and some red for the roof."

The salesman adds the cans to the pile. He has sold the man thirty per cent more goods than he expected to buy. A wrapper boy would have spent the time joshing the bookkeeper girl so that she couldn't work either.

There's many a wrapper boy posing as a salesman and drawing a salesman's pay in half the paint stores of the country. They are an expensive luxury for the boss to maintain.

---

## SHINGLE STAIN OR A NEW ROOF?

If an intelligent visitor from Mars were deposited on earth today, he would probably look at our shingled-roof, frame buildings and ruminate in a puzzled sort of way:

"I don't understand. There must have been a time, a very few years back when shingles didn't cost much of anything; when carpenters didn't charge much of anything for putting them on, for I see the side walls of most wooden buildings are carefully protected from decay by paint; whereas the roofs—most exposed to the rain and sun, of any part of the building, are left bare and unprotected."

A man born and raised on earth isn't surprised at this. He is used to seeing it that way, but if the Martian should ask him: "Why is it with carpenters getting $1.00 an hour and shingles costing as much proportionately as siding, you let your shingles decay for want of paint or stain protection; while seemingly so careful of your side walls?" he wouldn't know what to answer.

There isn't any intelligent answer. It's just that builders and owners of buildings haven't thought about it. Any of them would freely admit that wood is wood and needs protection from the elements just as much, or more, on top of a house as on the side of it.

You have a great opportunity in your paint and stain department to show your customers and your community that a "coat in time saves nine," and that it is cheaper to repaint the shingles than to renew them.

---

## IS YOUR CANCELLED CHECK A RECEIPT?

There is a common expression, "I do not care for a receipt, my check is all that is necessary." Do not place too much faith in the time-honored phrase, for a higher court has recently handed down a decision which is summed up in the last paragraph of their report as follows: "Unless the checks show on their face for what purpose they were given, it is the court's opinion that the burden continues upon the party pleading payment to show that the checks were given in payment of the account."

There are many instances on record where merchants have been losers on account of their inability to prove just what transaction or what amount was to be covered by the issuing of a particular check. The best plan is to demand a receipt for every payment made on account whether paid by check or not, and if you do not consider that necessary, at least write plainly on the face of the check just what it is intended for.

## COURTESY BUILDS PROFITS

How often do we hear people complain that certain business men act as though it were a favor to the customer to allow that customer to spend money with him. This complaint is almost always due to the lack of courtesy. People resent this atmosphere, and the business suffers.

Courtesy costs nothing, but it builds profits. Little acts of accommodation and thoughtfulness for the customer make him feel at ease, and make it easy for him to spend his money.

Courtesy does not mean humility. It does mean treating the customers as one would treat friends. It means treating them as one would like to be treated if he were spending his own money rather than taking money from others.

**Good Cheer Means Good Business**

"A smile is worth a million dollars, and it doesn't cost a cent." Many a man who counts his fortune today by the millions would never have accumulated more than a few thousands of dollars at the most if he had not learned to be cheerful. Smiles and good cheer have attracted people to him, and money and profits have come to him much as a magnet attracts iron filings.

No one likes to spend money in a dark and dismal atmosphere. Instead, people are likely to cling to their money. A bright and cheery atmosphere loosens the pursestrings, and the stream of gold flows freely. Words of cheer cost nothing. It is just as easy to say them as words without cheer, but words of cheer make an immense difference in the annual profits.

It is a fact that those public utility companies that have paid the most attention to courtesy and words of cheer are the most prosperous today. Who can say how much the slogan, "The voice with the smile wins," that the telephone companies have adopted, has had to do with the present prosperity of the telephone company. The transportation companies that we find bankrupt are not the ones which have become famous for the courtesy and cheeriness of their employes and officials. What better proof than this could we find that good cheer and courtesy pay?

---

Anything is a luxury until it is used for a time, and then it becomes a necessity.

---

Sunday School Teacher—"What do you understand by suffering for righteousness sake?"

Little Girl—"Please, miss, it means having to come to Sunday School."

---

The conveniences we know today were luxuries yesterday, and they are necessities upon which our daily existence very largely depends.

## TWO ONE-LEGGED MEN

(Copyright by Napoleon Hill)

In the town of Wichita Falls, Texas, I saw a one-legged man sitting on the side-walk begging for alms.

A few questions brought out the fact that he had a fair education. He said he was begging because no one would give him work. "The world is against me and I have lost confidence in myself," he said.

Ah, there was the rub!

"I have lost confidence in myself."

Across the hall from my office is another one-legged man. I have known him for several years and I know that his schooling was slight. He has less training than the one-legged beggar.

But, he is earning a thousand dollars a month. As sales manager of a manufacturing concern he is directing the efforts of fifty men.

The beggar displayed the stump of his amputated leg as evidence that he needed alms. The other one-legged man covered up the stump of his lost leg so it would not attract attention.

The differnce between the two men exists merely in viewpoint. One believes in himself and the other does not! The one who believes in himself could give up the other leg and both of his arms and still earn a thousand dollars a month. He could even give up both eyes, to boot, and still earn the money.

The world never defeats you until you defeat yourself. Milo C. Jones, of "Little Pig Sausage" fame, became a wealthy man out of the sausage business after paralysis had stricken him down and taken away the use of nearly every muscle in his body. He couldn't turn over in bed without aid.

As long as you have faith in yourself and that wonderful mind of yours continues to function properly, you cannot be defeated in any legitimate undertaking. This statement is made without qualifications, because it is true.

---

## A PERSEVERING SON-IN-LAW

A New Yorker visiting a New England village one day observed from the windows of his hotel an unusual commotion in the street.

"May I ask what is going on?" asked the new Yorker of the owner.

"We're celebrating the birthday of the oldest inhabitant, sir," said the Boniface. "She's an even hundred today."

"And tell me, who is that sad-faced little man walking by the old lady's side?"

"That, sir, is her son-in-law. He's been keeping up her life insurance for the last thirty years."

---

Cynics notwithstanding, there is more fun in "doing unto others" than in doing others.

---

Notice that "ideas" starts with I.

# Getting Action With Auto Accessories

A GROWING army of hardware dealers find the phenomenal increase in the demand for auto accessories justifies them in going after this business with all possible vigor. Many dealers are agreeably surprised to find how easily they can sell auto accessories.

They agree that one of the essentials in selling auto accessories is to keep the interests of motorists in mind. They also find it necessary to give advice regarding the necessity of attaching new parts or special equipment which will increase the motorist's safety and pleasure.

The dealer in auto accessories spends his time to good advantage. He advises car owners to overhaul and repair their cars, and suggests supplies they will need.

This list includes wrenches, wheel pullers, vulcanizers, valve grinding compounds, valve grinders, asbestos packing, ball bearings, bearing scrapers, belting and couplings, brake band lining and rivets, cap screws, transmission linings, taper pins, tire repairs, storage batteries, spring spreaders, spring oilers, rust removers, carbon scrapers, clutch compound, cotter pins, copper gaskets, etc., etc.

He makes frequent sales by showing car owners how they can make good use of accessories.

**Take Your "Cue" From Your Customer**

"I don't like to do any work on my car, because there are so many bolts to take out, and some of them are hard to get at," explains a customer.

Taking his cue from the customer's statement, the dealer shows his line of socket wrench sets, ratchet wrenches and angle wrenches. He explains that an up-to-date ratchet wrench set contains a special oval socket for main bearing bolts, a special pressed steel spark plug socket and ten pressed steel stockets. He shows that a set of socket wrenches will enable the car owner to quickly tighten nuts which are hard to reach.

"My car wastes gasoline, and oil keeps coming up into the combustion chamber," complains a motorist. "Do you keep anything which will remedy the trouble?"

"I do," replies the dealer. He knows that worn or defective piston rings waste gas and oil, besides causing loss of compression. He equips the motorist with new rings. Better still, his service department puts in the new rings.

"My car rattles terribly," states a Ford owner. "Is there any way to stop the racket?"

**Relief to the Victim of Rattles**

From his stock of anti-rattling devices the dealer selects the necessary equipment, among which we find a spindle joint anti-rattler, spindle adjuster, clevis silencer and brake rod anti-rattler. He adds a crank holder to the assortment, and tells the customer that most of the noise will be eliminated when the attachments are put in place.

In the meantime another Ford owner drives up. His car misses and knocks, and moves with difficulty. "I'm having an awful time with my spark plugs," explains the driver. "The porcelains keep cracking. What do you suppose is the matter?"

"You need a set of high grade plugs," smiles the dealer. "Try a set of these plugs, which have heavy mica insulation. Lots of my customers are using them, and I haven't heard any complaint."

Another Ford owner appears. "I don't like to drive my car," he explains. "When I come to a hill I take my hand off the steering wheel in order to pull the gas lever down quickly. Then if the road is rutty, sandy or muddy, I lose control of the car. I'm a new driver, and not a good one. Have you anything here which would make my car more convenient to drive?"

**Foot Accelerator Makes Driving Easier**

Replies the dealer: "A foot accelerator permits manipulating the throttle with your foot, and eliminates the necessity of moving the throttle on the steering column continually to vary the speed. Here is the best foot accelerator made; you will find it all complete, ready to install."

"How can I grease my car without getting all dirty?" asks a customer.

"You need a good grease gun," replies the dealer. "Here is a grease gun which works quickly and does away with soiled hands or clothing. It loads and ejects in half a minute. It has sufficient pressure to force old grease and corrosion out of bearings. I can recommend it as one of the most satisfactory grease guns on the market. You will find that regular use of a grease gun gives you a better lubricated and smoother operating car."

"I'm having a lot of ignition trouble," states another Ford owner. "My spark plugs are all right, but the old flivver keeps missing. What do you suppose is wrong?"

**New Life for the Fords**

"Probably need a new timer," replies the dealer. "A worn or defective timer is certain to cause trouble. Here is a timer made with as much care as a fine watch. It will deliver a hot spark to each cylinder, insure even firing and eliminate missing of one or more cylinders. You had better put in new wiring while you are changing timers. It pays to rewire a Ford from time to time, to avoid the possibility of short circuits. This wiring outfit consists of first quality wire, both primary and secondary, cut to correct lengths."

The Standard Spark Plug of the World

*When Tommy Milton drove his Duesenberg 156 miles an hour he relied on AC Plugs*

*When the Essex cut 12 hours off the transcontinental record, AC Plugs were used*

What does the wise accessory dealer do in times like these? He stocks quick-turn-over merchandise, the kind his customers want.

He reduces his inventory by concentrating on goods that are sure to sell and that will return his money with a good profit.

Foremost among such merchandise are AC Spark Plugs, the only spark plugs with a real record.

Year after year they have been used by the leading manufacturers for standard equipment.

Year after year they have been the choice of the leading racing men.

National advertising has scattered this story broadcast among the car owners of America. Consequently they are the spark plugs which are easiest to sell.

Rid your shelves of off-brand plugs that will not move. Stock AC's which turn over quickly and serve your customers best.

Write today for complete dealer information.

Champion Ignition Company, FLINT, *Michigan*

*When Roland Rohlfs flew the "Texas Wild Cat" 223 miles an hour he used AC Plugs*

*When Gar Wood won the Harmsworth Trophy with Miss America he used AC Plugs*

U. S. Pat. No. 1,156,727 April 13, 1915 U. S. Pat. No. 1,214,199 Feb. 13, 1917 Other Patents Pending

The customer paused before he started out with his purchases. "Old man Henton burned out some bearings the other day," he grinned. "The old Lizzie got too hot. Say, is there any way to tell when you have given a Ford all the heat it should be expected to stand?"

"A motometer will keep you informed regarding the condition of your motor," said the dealer. "I advise you to equip your Ford with this device."

The dealer was resting for a moment, when he heard some interesting conversation on the street. "Old lady Jones got tipped out of her buggy and all her eggs are smashed," said someone. "Bill Parks drove up behind her and she didn't hear him coming in time to pull out of the way. Says she didn't hear anything until he smashed into her."

**Sell Them Real Horns**

Later on in the day Bill Parks entered the dealer's store in company with some friends. "I am tired of the little buzzer on my car," he explained. "Have you a horn here which will make a loud noise?"

"Several of them," smiled the dealer. "It is a good plan to have both a hand horn and an electric horn on a car. I know you will agree with me that a reliable warning signal is necessary to avoid accidents. The car owner cannot afford to take chances which may result in damage to his car, and danger to human life. A short circuit or a dead battery may put an electric horn out of commission. A dependable hand horn is then a necessity. Here is a horn which can be heard on a crowded street, and for long distances on country roads; it is a warning signal investment you will be proud of."

"I want a warning signal which is different from the ordinary horn," explains a customer.

"Here is a compression signal whistle which might suit you," replies the dealer. "Its clear, intermittent signal is not objectionable. It is easily attached, and requires no attention save an occasional oiling. Or you may prefer an exhaust horn. Here is a high class exhaust horn; pressure on the pedal causes it to give forth a far-reaching warning signal. Then I have a motor chimes, which is preferred by some car owners. Its musical notes blend harmoniously, while the tone can be varied according to the volume required. Please note that its improved construction prevents clogging."

**Encourage Customers to Do Their Own Repairing**

A customer enters the store in search of a new inner tube. Having made his purchase, he takes time to express his opinion of local tire repair shops. "They charge too high," he explained. "I have lots of punctures; but it don't pay me to keep old tires repaired."

"Have you tried repairing your own tires?" inquired the dealer.

"No. Don't think I could learn how."

"Yes, you could. There isn't much to learn when you have the right equipment. Here is a handy little vulcanizer which attaches a permanent patch in five minutes. You will find it surprisingly easy to repair an inner tube with this outfit. It can be used anywhere at any time with perfect safety."

"Are there any additional tire aids I could purchase which would assist me in getting more mileage from my tires?" asked the customer.

"There are several articles," replied the dealer. "You require a box of tire powder, which keeps inner tubes from sticking to casings. Here is a preparation designed for use on casings. It prevents oxidation and sun cracks, thus adding life to the tire. Here is a tread filler which I recommend for mending small cuts and digouts in casings; it keeps dampness from the fabric and prevents sand blisters. Are you making regular use of a tire gauge? I thought not. Better include one in this assortment; for running your tires under inflated is one of the quickest methods of ruining them, and you cannot make certain of the right pressure by guessing."

**One Need Leads to the Next**

"I'm not much stuck on pumping air into tires," said the customer. "That is why I run them under-inflated when I am away from a free air station."

"Then you need a motor driven tire pump," explained the dealer. "Here is a pump which drives direct from the front end of the motor crank shaft. The outfit is compact, light and clean. I thought it would appeal to you."

Jim Briggs, the auctioneer, entered the store. "I have a long drive to make tomorrow over bad roads. Hope I don't get stuck like I did the last time," he remarked.

"It's advisable to be prepared at any rate," suggested the dealer. "No driver can tell when a shovel may be needed; it is a good practice to carry one in your car. Here is a modern auto spade, equipped with a detachable handle. It is practically non-breakable.

"As you have been stalled in mud holes you will appreciate this new towing chain. It is light in weight and unkinkable. You will find it a handy article to add to your equipment.

"I know you do considerable night driving; this is why I want to show you a new spot light. It throws the light just where you need it, and is the latest addition to motoring convenience. It permits you to inspect side roads before turning the car; it is the ideal spot light for high speed at night."

**Every Motorist Has His Weakness**

Having supplied the owner of a hard riding car with shock absorbers, the dealer took time to arrange his stock of radiator cement, cleaning preparations and auto polish. He finished the task in time to wait on a man who was inspecting the tires and tubes on display.

# Converse Tires

## *More Miles— Less Skid*

## Two Minute Chats With Converse Dealers—

***No. 1—"How Do Converse Tires Sell?"***

We put the question up to Frank McAllister—one of the biggest, most progressive, tire dealers in New York City. His success is easily traced to two things—never failing quality merchandise and high ideals as to what constitutes dealer service. Naturally enough he's a Converse Dealer.

"Just two kinds of Converse sales," he answered. "The first Converse sale—made on Converse appearance—the 9-times-out-of-10 repeat sales—made on Converse performance."

Here's pretty good backing for our claim that Converse Tires sell themselves. Why not get in line? You'll find the Converse Company a thoroughly-comfortable-house-to-do-business-with—that Converse Tires are **right** tires—that you can definitely insure profits by tying up with Converse. Send for the story of our dealer policy—

"Need a new tire?" asked the dealer.

"Yes; but how do I know your tires and tubes are high grade?" replied the customer.

"I carry a line of tires and tubes put out by one of the biggest tire manufacturers in the country," explained the dealer. "The manufacturer's guarantee means just what it says. If you buy tires or tubes from me, I will see that you get the service you have a right to expect. I carry new, fresh stock. My prices are reasonable. Why shouldn't I supply you with tires?"

"I'll take a couple of those non-skids," said the customer.

## HERE'S A TIRE SAVING HINT

Did you ever notice a ragged hole about the size of a silver dollar in the rear tire of a car? This little ragged hole is the result of carelessly turning corners. Many motorists swerve swiftly around a corner without slackening speed. They fail to allow sufficient leeway between the car and the curb in order to clear the rear wheel. When too sharp a corner is made, the rear wheel will often glaze the edge of the curb or climb up on it. This peels off some of the side-wall rubber.

Though little thought of, this injury is often the first cause of a later side-wall blowout. The facts of the case are that the fabric side-wall, having lost its rubber protection against the elements, quickly deteriorates. If taken in time, the repair of such an injury is very simple. The motorist may make a temporary repair by cleaning with gasoline, and then covering with a plastic, self-vulcanizing gum. When an opportunity arises, the casing should be taken to a tire surgeon for permanent repair.

## PRACTICAL EQUIPMENT FOR EMERGENCY GASOLINE, OIL AND WATER

Many a vacation-seeking motorist has had opportunity to thank the inventors of the Service Unit. It has long been customary, among those whose foresight prompts them to prepare against the annoyance and delay of being stalled along the road, to carry with them spare tires, tubes, and extra parts of many descriptions.

Until comparatively recently, however, dealers have been unable to furnish adequate provision for the most probable source of touring trouble—running out of gasoline, oil or water.

The Boyle Manufacturing Company of Los Angeles have effectually provided against any such emergency. The Service Unit, manufactured by them, has made it possible for every motorist to carry ample emergency supplies with greatest convenience. Attractively finished containers, of varying capacity, clamp securely and snugly to the running-board. Filling caps and handles are located in the top and steel channel bar fits over them, preventing rattles, protecting the caps, and eliminating all possibility of loss while traveling. The entire equipment presents a pleasing outfit and is at all times out of the way.

The fact that it so well fills a long-felt need has gained it an instant popularity among motorists and the ready sale, which dealers experience, has proved gratifying throughout the country.

## IMPORTANT DECISION IN RECOVERING LOSS FROM RAILROADS FOR LOST OR DAMAGED GOODS

(Copyright by Elton J. Buckley)

I have just received the report of a decision of the United States Supreme Court in a case involving the amount which a shipper or receiver of freight can collect from a railroad when the goods are lost or damaged. The case is important because it overturns a decision of the Interstate Commerce Commission, which worked so that in many cases the shipper could not collect his full loss.

The provision in the bill of lading which was under consideration here was that

"the amount of any loss or damage for which any carrier is liable shall be computed on the basis of the value of the property at the place and time of shipment under this bill of lading, including freight charges, if paid."

The point was this: Take a case where the market on a certain article at the time it was shipped was a dollar. By the time it reached its destination, the market had advanced to $1.25. In spite of that the owner, if the goods were destroyed, could only collect from the railroad on the basis of a dollar, although his actual loss was on the basis of $1.25. Of course the provision helped the shipper when the market declined, but the road must have had reason to believe that advance happened oftener than decline, or it would not have put the clause in.

In the case decided by the Supreme Court the owner of some grain shipped it from one state to another, under a bill of lading containing the above language. (Virtually all bills of lading contain it now.) When the grain was shipped it was worth $1,200.48, when it arrived it was worth $1,422.11. In some way it was lost, and the railroad paid the owner $1,200.48 and claimed that was all it had to pay. The owner, in spite of the clause in the bill of lading, appealed to the lower United States court on the ground that from every standpoint of equity, a railroad should pay the full value of the goods it lost. The Interstate Commerce Commission had decided the very question before in favor of the road, but despite this the lower court gave the shipper a verdict and when the case was carried to the Supreme Court, that body affirmed, thus settling the question forever.

The heart of the decision is that under a recent act a railroad is liable for the full value of goods it loses and that it cannot limit its liability by any such provision as the one I have quoted. The following is from the decision:

The Cummins Amendment to the Interstate Commerce Act of March 4, 1915, provides that the carriers affected by the act shall issue a bill of lading and shall be liable to the lawful holder of it "for any loss, damage or injury to such property * * * and no contract, receipt, rule, regulation or other limitation of any character whatsoever, shall exempt such common carrier * * * from the liability hereby

*DEALERS—*
*Write for our book listing over 1500 kinds of Harvey Springs and for details of Harvey advertising helps.*

*An Arch is as strong as its keystone*
*A Spring as strong as its center*

# Harvey Springs are Boltless

THE ordinary spring, weakened by a hole in its center, punched cold to accommodate a bolt, is like an arch with a weak keystone. The vital spot lacks strength.

The Harvey Spring is boltless and has no weak spots. It is as strong at the center as at any other point. Instead of a bolt hole at the center each leaf has an indention on one side and a bead on the other, forged hot in one operation. The bead of one leaf fits into the indention of the next leaf and the whole spring is held together by a strong clamp. No metal is removed and the steel fibres are unbroken.

**This feature, with that of the patented Harvey process of heat treating and tempering, gives the Harvey unexcelled strength and resilience. It adds safety and comfort to the motor car and lengthens the life of the driving mechanism.**

**The Harvey Spring is practically unbreakable, even under unreasonable strains. Once sold it stays sold.**

**Our broad, unconditional guarantee protects both the dealer and the purchaser.**

**Harvey Spring & Forging Co.**
**118B Seventeenth Street** **Racine, Wis.**

GUARANTEED EASY RIDING

Digitized by Google

imposed;'' and further, that the carrier ''shall be liable * * * for the full actual loss, damage or injury * * * notwithstanding any limitation of liability or limitation of the amount of recovery, or representation or agreement as to value in any such receipt or bill of lading, or in any contract, rule, regulation or in any tariff filed with the Interstate Commerce Commission; and any such limitation, without respect to the manner or form in which it is sought to be made, is hereby declared to be unlawful and void.'' Before the passage of this amendment the Interstate Commerce Commission had upheld the clause in the bill of lading as in no way limiting the carriers' liability to less than the value of the goods, but merely offering the most convenient way of finding the value. In a subsequent report upon the amendment it considered that the clause was still valid, and not forbidden by the law.

We appreciate the convenienee of the stipulation in the bill of lading and the arguments urged in its favor. We understand that it does not necessarily prevent a recovery of the full actual loss, and that if the price of wheat had gone down, the carrier might have had to pay more under this contract than by the common-law rule. But the question is how the contract operates upon this case. In this case it does prevent a recovery of the full actual loss, if it is enforced. It seems to us, therefore, that the decision below was right, and in our opinion, the conclusion is required by the statute.

The many subterfuges used by the railroads in order to avoid having to make fair settlements with owners of goods lost or damaged en route, have now been pretty effectually smoked out by one court decision after another. There is very little in the bill of lading today which hurts a shipper or receiver, if he will read it and act upon it.

## W. & B. DRILL AND REAMER CATALOG

In accordance with the recent reorganization of Whitman & Barnes Mfg. Co., the new catalog No. 92, which has just been issued by the company, is confined to twist drills and reamers. However, the limitation in the line allows for an elaboration and fullness of detail in describing the twist drills and reamers which has not been possible hitherto.

Screw and drop forge wrenches, which have previously been included in the Whitman & Barnes catalog, will now be marketed by the J. H. Williams Co. in accordance with the reorganization of the companies.

## HAMMERED PISTON RINGS FOR HAWAII

An order from Honolulu for 15,000 piston rings has just been announced by the export department of the American Hammered Piston Ring Co., Baltimore, Maryland. This firm has noted the steadily increasing demand in Hawaii for high grade American made automotive parts. Not even in the tropic breezes of the land of the ukelele, it seems, will motor cars run without piston rings.

Factory expansion in the American Hammered Piston Ring Company's Baltimore plant during the past year has made possible the present output of 50,000 rings per day. This increased production was needed to enable the company to take care of its big demand in the United States.

Regular shipments of American Hammered Rings are now going to foreign markets, which have been more or less neglected by American manufacturers during the past few years.

The Eymann-Suderman Hardware Company of Reedley and Parlier, California, has opened a large store at Fresno, California, where they will specialize on farm implements.

## WHY RIGHT TIRES WEAR FIRST

The fact that tires on the right-hand side of a car wear out faster in proportion to those on the left-hand side, often puzzles motorists. The popular supposition, that this wear is caused by turning many corners to the right, is incorrect. The fact is that the increased wear is actually caused by the pitch of the road, which throws more of the car on the right side than on the left.

The round of the road from curb to curb is far more important in determining the sequence in which tires normally wear out—right rear, left rear, right front, left front—than is gutter wear and abrasions from grinding off and on pavements.

The slope of the road causes the right rear tire to carry more weight than the left rear tire. Thus the right rear wears the faster of the two. The right front also will wear more rapidly than the left front, for the same reason.

However, as the left rear wheel receives a driving pull while the right front does not, it will wear the faster of the two. Under average conditions the right rear tire wears out first and the left front last.

To secure uniform wear from a set of tires, change them around, about once a month. Particularly is it important to reverse the rear tires. After the rear tires are worn down, reverse them with the front.

## CLOVER COMPOUND FOR PISTON RINGS

Compression leaks and the use of Clover grinding and lapping compound, in connection with piston rings, is fully set forth in Bulletin No. 80 of the Clover Manufacturing Company, Norwalk, Connecticut. Just off the press and in the hands of the trade. The bulletin thoroughly analyzes and describes the construction and operation of piston rings and how it is that Clover compound supplies just that finishing touch and last turning that makes a perfect fit between the ring and cylinder wall.

The trade of course has known Clover Compound for some time as a magic aid in valve grinding, lawn mower sharpening; in fact a surfacing and grinding preparation for any knife edge machine tool.

The western branch of the Clover Manufacturing Co., at 559 Howard St., San Francisco, will be glad to send the new bulletin to any merchant who has not a copy.

## MARQUETTE FACTORY EXPANSION

So great has been the demand of the trade for the automotive specialties of the Marquette Mfg. Co. of St. Paul, Minn., that the new company has found it necessary to build and equip a new factory at Minnesota Transfer, where the plant is located. For the last three months the construction and installation has been going steadily on, and October sees the new plant in full operation. The latest improved machinery has been installed, so that with quantity production the company can keep up with the demands of the jobbers and dealers.

The officers of the company report that Marquette luggage carriers and tire tools, and the Little Giant rim tools are being sold and supplied to nearly 80 per cent of the largest hardware jobbers in the United States.

Sales offices of the Marquette Mfg. Co. are located at 681 Endicott Bldg., St. Paul, Minn.

## BUILT UP BUSINESS BY SPECIALIZING

I was mightily interested in reading the account of the business experience of a young fellow in a town in Pennsylvania—in a small city of twenty or thirty thousand people.

He was a clerk—a hardware clerk—but he had a few ideas and energy enough to put them through. He wasn't satisfied with his job; he was discontented with his pay, and the future looked drab and gray, like a foggy morning in autumn.

He studied a long time to get his ideas in concrete form, for he knew he ought to do something, but it surprised him to learn how difficult it was to find out just the right thing to do. He struck upon it at last, however, and then he got busy putting it into effect.

What he did was to persuade the boss of the hardware store to invest five hundred dollars in automobile accessories and give him charge of the "department."

The boss was slow about making the investment, and it took a lot of talking to bring him around, but the young fellow had perseverance in his make-up, and he stuck at it until he had the department.

He took a personal pride in this and backed it up with all his skill and energy. And he made a success of it.

In due time he concluded to open a store of his own. This he did in the most modest manner, for his capital was exceedingly limited. It was an auto supply store, but a different kind from the usual.

It was a specialty store.

He resolved to specialize and only handle one style of a kind, instead of several styles. This allowed him to carry a much larger general line, and he was therefore able to cover the trade pretty well.

He gave very careful study to each item he carried. For instance, he made a study of lubricating oil. There are scores on the market—some way up in price, some very cheap, but poor, some medium price, but inferior quality, and one, two, or three that are bang-up in every way. He selected one of these bang-up oils and carried it exclusively.

He had the house send a salesman who gave him all the history of that oil—its points of merit, and just how and why it was superior to others. And he went over it until he had it pat in his head and could rattle it off to buyers.

Then he united with the house in pushing the oil, and had them assist him all they could with their advertising, which he cheerfully distributed to the best advantage.

As he had done on oil so he did all through his line—handling one style of each kind, which was carefully selected after the utmost care, and working with the manufacturers in selling it.

His business began at once to grow—grew amazingly, grew faster than he could keep up to it with extra space. Today he is a leader of his city in his line.

All because of an idea.

---

## CREATIVE MERCHANDISING

Creative merchandising presents wonderful attractions. It is an uncharted jungle in which there are general rules known to successful merchandising, but no fixed routes; because when you go out into the world to create a demand for your goods you deal with the varying minds of the human race whose natures and characters are not to be charted scientifically. You must impress that great force that we call public opinion with the value and attractiveness of what you have to sell in direct competition with other keen minds, offering other things for sale, who are trying to attract the public cash their way.

---

## MOTORISTS CRY "HI! HI" IN JAPAN

Motorists thinking of visiting Japan are advised to read and consider seriously the following English-Japanese rules, of the road that govern motor drivers in that country:

At the rise of the hand of a policeman stop rapidly. Do not pass him by or otherwise disrespect him.

When a passenger of the foot hove in sight, tootle the horn trumpet to him melodiously at first. If he still obstacles your passage, tootle him with vigor and express by word of mouth the warning "Hi! Hi!"

Beware of the wandering horse that he shall not take fright as you pass him. Do not explode the exhaust box at him. Go soothingly by.

Give big space to the festive dog that make sport in the roadway. Avoid entanglement of dog with your wheel spokes.

Go soothingly on the grease mud, as there lurk the skid demon. Press the brake of the foot as you roll round the corners and save the collapse and tie up.

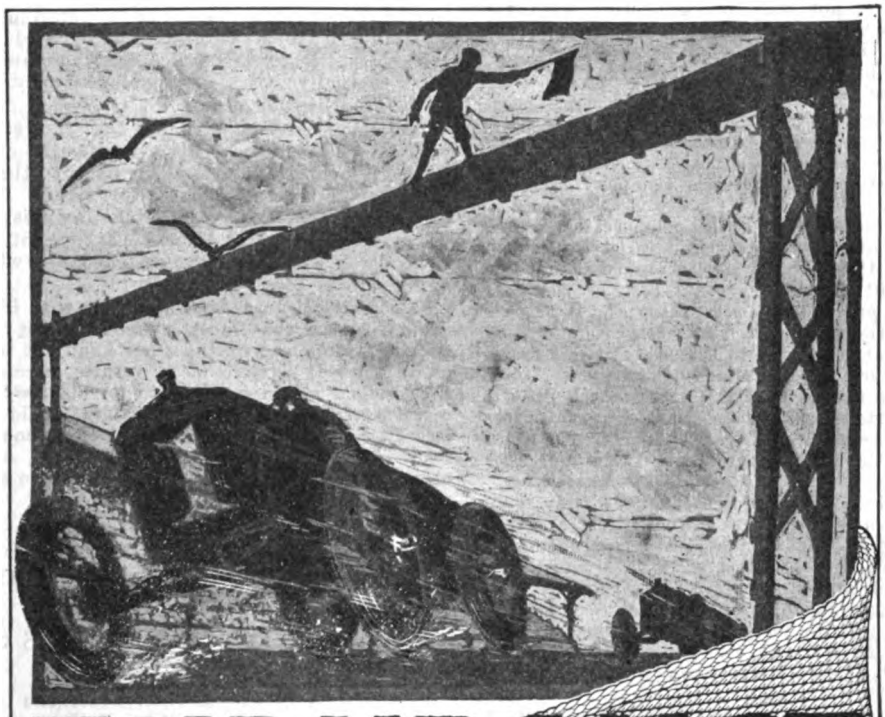
---

## THREE KINDS OF SALES MANAGERS

There are three kinds of local sales managers—the self-starter, the hand-cranker and the trailer. Figure out your own classification.

"No man's land must be a bare sort of a place now."

"That's hardly possible. I've heard it's covered with duds."



---

"Inspiration starts things; intelligence guides things; industry does things."

---

When you think you have put one over on the other fellow, remember the shark which swallowed the swordfish and thought he had completed the job.

## RECOLLECTION OF THOUGHTS AND MEMORIES A PRICELESS POSSESSION

In making announcement in a recent issue of the retirement of Andrew Carrigan from the well known jobbing house of Dunham, Carrigan & Hayden Company, we unintentionally omitted a letter received from Mr. Carrigan, who has always been a prominent factor in the western trade, not only in connection with the institution which has so long borne his name, but who will likewise be long remembered by reason of his interest in retail hardware associations.

His letter is self-explanatory:

Dear Mr. Shearman:

Replying to your very courteous letter covering my resignation as vice president and general manager of Dunham, Carrigan & Hayden Company, beg to reply as follows:

My length of service with this corporation lacked about one month of thirty-four years, during the major portion of which time I had been in practical management. During 1918 I spent a great part of the year in the East and principally in Washington, D. C., endeavoring to aid the emergency war work by impressing upon those in charge of affairs the necessity of maintaining larger stock of miscellaneous hardware, tools and steel supplies on the Pacific Coast for the benefit of the ship builders and other coast manufacturers engaged in emergency war work, owing to the great distance of Pacific coast points from their source of supply.

The work of 1918 with the continuance of my managerial duties commenced to tell, and I felt a strain of which I desired to be relieved. My resignation as vice president and general manager of Dunham, Carrigan & Hayden Company was presented and accepted on July 12, and having been relieved of active service I am now negotiating with one of the remaining interests for the purchase of my own and the majority of the other Carrigan holdings in this company at a price and under conditions satisfactory to myself.

While my resignation severs me from physical contact with the affairs of Dunham, Carrigan & Hayden Company, it can never sever me from the recollection of the thoughts and activities of half a lifetime and the memory of many friendships made in the hardware fraternity during all these years will remain with me to the end of my days. I shall watch with personal pride and gratification the continued prosperity and success of my old company, for the reason that such achievements will be the result of the splendid organization in the building of which I was somewhat instrumental.

With kind regards, I am,

Yours sincerely,

ANDREW CARRIGAN.

## ENLARGED QUARTERS FOR ATKINS SAWS

The plant of E. C. Atkins & Co., manufacturers of Silver Steel Saws, Saw Tools and Machine Knives, has become so crowded that buildings are being enlarged and erected continually.

No sooner was an additional story completed to the handle factory, than a four story addition to the power plant and a three story building was started. The Company needed more floor space to take care of the expansion of the different departments and the two new buildings will give additional floor space of about 60,100 square feet.

The first floor of the power plant building is to be used as an engine room, from which they will generate their own electricity. The other three floors will be used for factory purpose, one for the cross-cut getting-out department and the other two floors for hand saw packing. In the three story building the basement will be used as a grindstone cellar, one floor for cylinder saws and the other floors for narrow band saws.

## BUY CLOSELY, BUT NOT TOO SHORT

Editor HARDWARE WORLD:

We have been advising our trade for some time past to buy conservatively, to push their slow moving lines, and pay close attention to the collection of accounts.

Of course, you understand that the jobber does not like to fill very small orders of the retail merchant, such as many of them are inclined to send in, as it is merely giving retail service at wholesale prices, and often actually costs the jobber money out of the pocket to fill such orders.

On the other hand, we find that the retail merchant who is inclined to overbuy, frequently desires to relieve his overload by shipping back to the jobber any items upon which he is overstocked. This also is extremely expensive to the jobber, as it is the handling of merchandise twice to make one profit. Besides, it is rarely, if ever, in first class condition when returned and re-stocked.

There is no doubt in our minds that if the jobbers could educate the retail merchants not to send in trifling orders and on the other hand not to so overbuy as to find it expedient to return merchandise, that the jobbers would be able to do business on a closer margin of profit and the dealers would receive the benefit, but so long as a few of them continue to use poor judgment in matters of this sort, naturally the other dealers who are more discreet have to suffer the consequences.

Yours very truly,

KIMBALL-UPSON COMPANY,

Sacramento M. N. Kimball, Pres.

## ADVANTAGE OF DEALER'S STORE PAPERS

Sappers, Inc., who, as their letterhead indicates, are dealers in hardware, furniture, farm tools and implements, plumbing, electrical supplies, automobile repairs and accessories—which is typical of a large number of hardware stores throughout the great West handling these various lines, tell us that their house organ, "Sapper's Ink," brought them many direct results, and they know it is paying them, and its accumulative value will be greater as time goes on.

Mr. Otto G. Sapper, president of the company, was recently on a trip to Erie, Pa. He had his entire mailing list sent to him, and each party who was on his mailing list in his store in Oregon received a postal card of some Erie scene, with Mr. Sapper's name attached to each card.

He has found that the receipt of these cards by his customers was very pleasing to them to know that they were remembered, they having stopped him and thanked him for remembering them when he was so far away.

It is this personal touch, this evidence of one's thought and interest in another's welfare, and in their pleasure, that does so much to make for the success of a retail merchant.

Mr. Sapper advises us that he has always been a most interested and close reader of the HARDWARE WORLD, and that he makes a point of going through the advertisements first, then the reading matter, so he does not miss a thing from cover to cover.

**VALUABLE FOR MERCHANTS AND SALESMEN**

We are enclosing renewal of our subscription for the next three years. Your paper is well worth the money. You have many good articles that are valuable to every hardware merchant and salesman.

With our best wishes, believe us,

Sincerely,

Powhattan, Kan. POWHATTAN HDWE. CO.

## SATISFIED WITH ELECTION RESULTS

Before this issue is in the hands of all our readers the national election will have been held and the result known, yet writing three weeks before this election is held, we confidently say we are satisfied with the results of it.

We have no better or other means of information as to who will be elected than any of our readers. The exigency of printing and publishing a magazine of the size and quantity of the HARDWARE WORLD makes it necessary to send our forms to print some time in advance of our issue of the first of the month.

**Majority Should Rule**

We do not claim to possess the gift of prophecy, but in saying we are satisfied with the results of the election we do so because we believe in the right of the majority to rule.

We believe in the well known proverb "in a multitude of counsel there is wisdom," and we believe in the principles upon which our constitution was established.

We believe that the republic of the United States is the best form of government that has ever yet been devised.

We believe that the will and intelligence of the majority are to be considered, and that no one man or a dozen men are capable of unselfishly formulating and directing a policy for one hundred and five million people.

Ours is a representative government, where we choose representatives to make our laws. Surely Congress with its 500 members is not too small a body to direct and formulate the policies that make for the welfare of the whole nation. Hence, it is not so much a question as to who will be elected, as that the majority should rule.

We hope that whichever party is successful the majority for the successful candidate will be so large that there will be no mistaking the will of the people and that when this is known everyone should loyally cooperate to correct the errors and abuses that have gotten into our government by reason of the exigency of the war, or other causes.

The new president, be it Cox or Harding, will need the active sympathy and support of every true American.

It is natural that we should progress in legislation and in movements designed to benefit every condition of citizenship. We should eliminate all group or class influence where it is designed to benefit the few at the expense of many, and should go loyally about our own work and business, carefully considering the welfare of others as well as ourselves.

**Need the Best Independent Thought**

The partisanship of one party who vote their ticket straight regardless of who is nominated, or what it stands for, is probably counterbalanced by the partisans of the opposing party, who do likewise. It thus remains for the independent and intelligent voters to inform themselves on all questions before the country, and not be misled by partisan pleas, either to continue in office or to elect to office, those whose standards of life and morals will not bear the closest scrutiny.

We need to keep our house in order and thus we can best serve the world at large.

We need to set an example to the rest of the world and cannot hope to reform and change old world habits and conditions of thought, which are the growth of centuries, of an environment of which we know little, and could scarcely influence to any appreciable extent.

All progress will come slowly and one of the surest and best methods is by example.

---

## TIRES CONTINUALLY ROLL UP HILL

A curious thing about tires is that they continually roll uphill. This is due to what is scientifically termed "traction wave," but what is popularly called "bulge." Both terms mean the expansion of that portion of the elastic carcass of the tire, which by weight and forward pull, is forced just ahead of road contact.

In motion, the tire is continually attempting to run over this traction wave, which, just ahead, always eludes it. Incidentally underinflation increases the wave.

On a plain tread, the wave runs round and round and round the tire. But a tread design with a backbone ribbed or cogged, has been found effective in dividing and in throwing it off each side. Some treads are corrugated; some smooth, some indented, but a purpose of all of them is to provide maximum traction to overcome this wave.

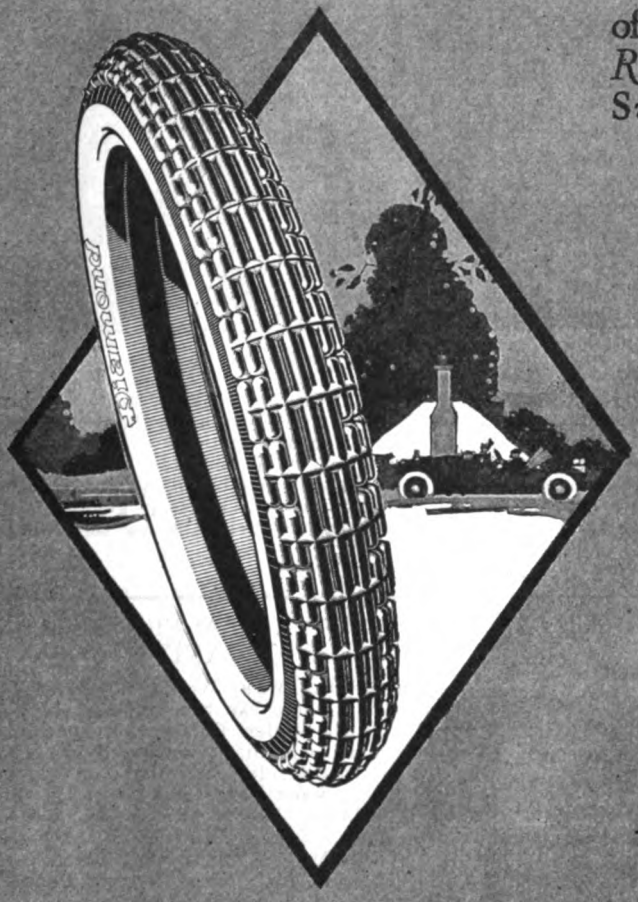
The tread must provide also for minimum road resistance, for minimum injury to the carcass underneath, and for maximum road wear. Like the soles of shoes, a tread must absorb direct wear. Different kinds of service have their individual effects. Scuffing, skidding, spinning, tearing effects of rough roads—all these have a tendency to promote rapid wear.

When a tread is torn or badly worn, it should be taken to a competent tire surgeon. He will tell whether it is worth a repair.

---

## PRESENT ATTITUDE OF TODAY

"I'll give you five dollars a day, spot-cash," said the farmer to the tramp who had stopped to beg a meal, "if you'll help me dig potatoes. We'll begin right now," he pointed at the big field, "because I'm afraid the frost will get them."



"No," yawned the tramp. "You better dig 'em. You planted 'em and you know just where they are."

## WELLS & WADE OF WENATCHEE

Have put another "W" into their wonderful western combination and that is Windows. In speaking of this enterprising institution it is almost necessary to use "Superlatives" to do justice to these progressive merchants who are not surpassed in putting into daily practice up-to-date business methods.

Their window displays are not only notable in the Yakima Valley, but throughout the Northwest. Here is a window that our representative photographed, featuring tools on the left and household goods at the right of the entrance. Although the perspective is a little misleading, the impression is very genuine. A sharp painted background emphasizes the exhibition in the window, a few articles being shown to illustrate each picture.

The brick and tile set off the window display to a great advantage.

## BUT JOE WELSH PROVED HIS WORTH EVER SINCE

Editor HARDWARE WORLD:

Here is a story for your next issue:

A hardware man puts a sign in his window:

"Boy Wanted"

In drops a newsboy with a bundle of papers on his arm. Pointing to the sign:

"Say, are you the man that wants a boy?"

"Yes, I'm the man who wants a boy, who wants to learn the hardware business."

"How much do you pay?"

"I will pay you $3.00 each week to start on."

"Three dollars a week—Gee! I can make three times as much selling papers!"

"Well boy, let me tell you. When I was a boy I worked in a hardware store two years for nothing."

"Gee! Maybe that's all you was wortn."

PASADENA HARDWARE CO.

## SUGGESTIONS TO REMEMBER

A surprising fact in tire conservation is that it is better to run over a rock in the roadway than to hit it a sharp glancing blow. Of course, such obstacles should be avoided if possible, but when the dilemma of a choice is forced upon the motorist, this decision is best.

To hit a rock head-on may cause a severe jolt, and furthermore is likely to stone bruise the tire, but it causes less damage in the end to the tire properly inflated than a sharp blow against the side wall and rim. As explained by tire experts, the reason for this is that the tread of a tire is the part best able to absorb shock incident to normal operating conditions.

Side walls, however, are not intended to be shock absorbers but to give the carcass of the tire strength and shape. Rubber on the side wall is laid on to protect the tire fabric from the destructive action of the elements.

The tread of a tire is thick and resilient and made to withstand the abrasive action of the road. A layer of cords, heavily imbedded in cushion rubber, is specially designed to neutralize and distribute blows.

With tires constructed in this way, the motorist has little choice if unable to avoid an obstruction, than to take the blow on the tread rather than on the side wall. Careful driving should rarely make such a decision necessary.

---

Don't wait for inspiration. Inspiration will come with the act of working and the busier you are the greater will be your inspiration.

## YOUR FAILURE DEPENDS ON YOUR CLOSE ACQUAINTANCE WITH HIM

I am more powerful than the combined armies of the world.

I have destroyed more men than all the wars of the world.

I am more deadly than bullets, and I have wrecked more homes than the deadliest of siege guns.

I steal, in the United States alone, over $300,000,000 each year.

I spare no one, and I find my victims among the rich and poor alike; the young and old; the strong and weak; widows and orphans know me.

I loom up to such proportions that I cast my shadow over the field of labor from the turning of the grindstone to the moving of every railroad train.

I massacre thousands upon thousands of wage earners in a year.

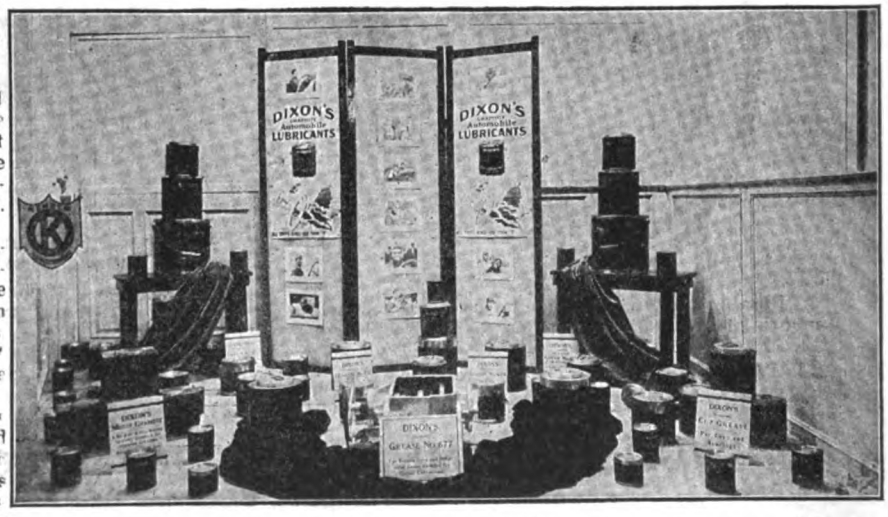
I lurk in unseen places, and do most of my work silently. You are warned against me, but you heed not.

I am relentless. I am everywhere; in the home, on the streets, in the factory, at the railroad crossings, and on the sea.

I bring sickness, degradation, death, and yet few seek to avoid me.

I destroy, crush, maim, take all, and give nothing.

I am your worst enemy.



I am Carelessness!

---

A well-filled head leads to a well-filled job.

## BELCHER & LOOMIS HDWE. CO.

**A very attractive display** of Dixon's automobile lubricants was recently staged by the Belcher & Loomis Hardware Co., Providence, R. I. a leading accessory house of old New England. That the exhibit had unusual merit may be inferred by reference to the illustration. The window was dressed by H. C. Crabt.

Considerable skill is required to show a prosaic product like grease without the aid of extra "scenery," such as used by tire companies But this window proves what can be done with simple equipment and a few cans.

The walls of the window were tinted light gray and the floor was covered with mottled light blue paper, thus furnishing depth to the display. The brilliant red cans in which Dixon's lubricants are packed were set off to good advantage by draping rich green plush over the stands and by red plush in the foreground.

Of cource, the aluminum-finished gear case furnished the necessary action and was the center of the exhibit. The color scheme and grouping of the objects were so effective people simply could not pass the window without stopping. Much favorable comment was heard—and what is more important from a business standpoint, many new customers were created for Dixon's lubricants.

## HOW YOUR ADVERTISING WILL REACT AGAINST YOU

The test of your advertising is the results it produces; not in the number of persons it brings to your establishment, but in the number of sales it is instrumental in effecting.

The more accurate your advertising, the better your chance of drawing interested customers to your place of business. The less accurately you describe the goods on hand, the poorer your chances are of attracting the customers you require.

Advertising can disappoint about as much by what it fails to say as by direct misrepresentation. And once the customer is misled in this manner confidence in further advertising is seriously undermined.

If the retailer has a special sale on anything in his particular line and sets forth that fact in print in an alluring manner, he will find ready response from people who are in need or at least interested in these very items.

### Don't Pay to Mislead

But if Mrs. Jones reads an advertisement concerning a wonderful sale of clothes wringers, bread mixers, and other things of which she is in need, and puts herself out to arrange her work or social affairs so as to come to the store and make purchases for herself, only to find the assortment offered consists of various things she has no use for and not in direct line with the advertisement, she will be indignant. She will feel that the advertisement has misled and deceived her and caused her to waste time and effort.

It is a far better policy to make each advertisement accurately descriptive of what is offered for sale. By so doing you have a strong chance of winning customers who want those very articles and you run no risk of prejudicing those who will not be interested when they come face to face with these goods.

### An Example in Selling Tires

A case of this kind recently came to notice. A dealer found himself with a lot of odd-sized tires of different qualities on hand. Some were perfects and some were seconds. He decided to get rid of them and earn something of a reputation for himself as a man who would give rock-bottom prices as a matter of principle to his customers. Whether he was striving for a reputation that would do him any good is another matter, which we will not discuss at this time. He prepared a display ad which was extremely indefinite, but which spoke of certain well-known tires as being priced in a most attractive manner.

One man who lived forty miles away happened to see the advertisement, and put himself out greatly, thinking to be able to get six or eight tires at a distinct saving of money. He made the trip in pouring rain, only to find there was not a tire in the lot that he could or would use.

He was highly indignant, and told the dealer what he thought of his advertising methods, and that he would never put any stock in another of that firm's ads.

At the close of the sale only about thirty per cent of the goods had been disposed of, and the advertising had been expensive.

A controversy arose between the dealer and his partner. The partner insisted on running a second sale and in stating in the advertisement exactly what was on hand to be sold. This was done in a painstaking and honest manner and all the goods so offered were sold out before the week was half gone, for the simple reason that people who wanted tires of the sizes and kind specified came to the sale, knowing what they would find.

### Either Increases or Diminishes Your Good Will

Every time a person comes into your place of business and fails to find that the goods you have advertised are what he has been led to expect, you have decreased the good will of the business, and good will is a big asset. Sometimes it is not wise on the part of those with goods to sell to praise them too highly for fear of arousing doubts or suspicions, nor should those goods be damned with faint praise. A sensible middle course is what is demanded. State the facts, and if possible give proof of these facts. Advertising of this kind is convincing, and even if the customer who reads it is not in need of the articles described, he will gain confidence to the extent that when he has needs which you can fill he will come to you as a matter of course. This is the real secret of the tremendous business built up by many of the country's biggest retailers.

The customer who comes to your establishment and finds that the goods are all and more than you claimed for them will prove one of your best advertising mediums.

---

## ECONOMY RUNS

"I went twenty miles on a gallon yesterday."

"That's nothing. I went two months on a quart."

## NEW SOUTHERN CALIFORNIA JOBBERS CLIFTON AND CROW OF WACO

Texas is not only the largest state in area but at its present rate of growth bids fair to rank among the first in its manufactured products at no distant day.

The cotton producing center in the United States is moving west gradually, and although we have not the statistics at hand, we believe that the center is now in Texas.

A. T. CLIFTON
President of the Clifton Mfg. Co., who is doing his full share to put Texas on the map in a manufacturing way.

At any rate the Clifton Mfg. Co. has taken advantage of the superior advantages of Waco for its production of natural cotton and also for an abundant and sufficient labor available there to locate what is probably the largest factory for canvas goods in the United States.

It was our privilege to meet President A. T. Clifton recently and we cannot refrain from passing on a word to our readers. Accompanying him was Secretary L. M. Crow and here he is also, but by no means an old Crow. He is a typical Texan and the thoroughbred secretary for the Clifton Mfg. Co.

Mr. Cilfton organized the company some twenty years ago, and its growth and development is a tribute to the president and its founders in their activities and foresight. Mr. Clifton's father, W. R. Clifton, a banker and stockman in Texas, is vice president, and has aided in its finances, but has never been active in its management.

Being in the midst of the cotton producing region, naturally the company's factory was ideally equipped to manufacture canvas and fabric goods.

Within the last few years the automobile accessory industries have opened up a new field for their products, and they are now large producers of auto fabric equipment of all kinds, including seat covers, tops, top recovers, tire covers, combination tents, etc.

Its representatives are located in such centers as Chicago, St. Louis, Denver, Phoenix and San Francisco. The factory at Waco employs 250 people during the height of the season. J. C. Austin is general manager of the company.

L. M. CROW
Secretary of the Clifton Mfg. Co., who is making the products and the name known throughout the far West.

Their products have earned a splendid reputation wherever known and they plan to make them more generally known.

---

Lowman & Son, Wallula, Wash., have just moved into their new concrete building and have increased their stock considerably to take care of their growing business.

---

Murray Hardware Co., Richland, Wash., successor to Fred Bier, report business is good. They recently added tires and auto supplies to their stock.

**VALUED BY SPANISH BUYERS**

We consider the HARDWARE WORLD as a most excellent hardware friend, from which we can obtain a vast amount ot useful information, hence we are instructing our American representative to send you remittance to cover renewal of subscription.

We represent in Spain a number of American manufacturers, and to any hardware manufacturer who desires to introduce his lines in Spain we will be pleased to give all the information and cooperation they may desire.

## MOST EFFECTIVE DISPLAY FOR 1847 ROGERS BROS. SILVER

The attractiveness and possibilities for display of the International Silver Company's 1847 Rogers Bros. Silverware somewhat detracts from the credit due a merchant who makes an attractive display of this line. The Maison Blanche Co. of New Orleans had a most wonderful window display, and it is good enough to bear reproduction. So we are glad to pass it along to our readers, so they, too, may find it suggestive and inspiring.

The window can certainly be used by merchants throughout the country as a model.

The window-trimmer made liberal use of various display helps which the company distributes to the trade, including trade mark signs, reproductions of advertisements, pictures, window cards, display racks, etc. The ware itself, however, is the main feature, and is by no means subordinate to the printed matter which was used merely to set it off.

The makers of 1847 Rogers Bros. ware were pioneers in the field of dealer cooperation in supplying trade and display helps. They believe in working with the retailer.

The International Silver Co. has a very active sales promotion department which works hand-in-hand with its advertising force to be of real service to the retailer.

The Maison Blanche are one of the largest retailers in the South, and are large factors in distributing household goods, hardware, accessories, etc.

## FOUR FRIENDS

For greater gifts I would not pray,
Nor ask the gods to send my way,
If I could have four friends a day.

A friend of better days than this,
Of brighter sun and golden bliss
Before the times had gone amiss.

A friend of worse days, dark and drear,
Who shared the hours of storm and fear,
Before the skies began to clear.

A friend new made who shall afford
Adventures of the unexplored,
A friend with happy future stored.

An old friend who has stood the test,
Has known the worst and known the best,
Alike in both forever blessed.

---

When you trip, try to fall forward and get up nearer your goal.

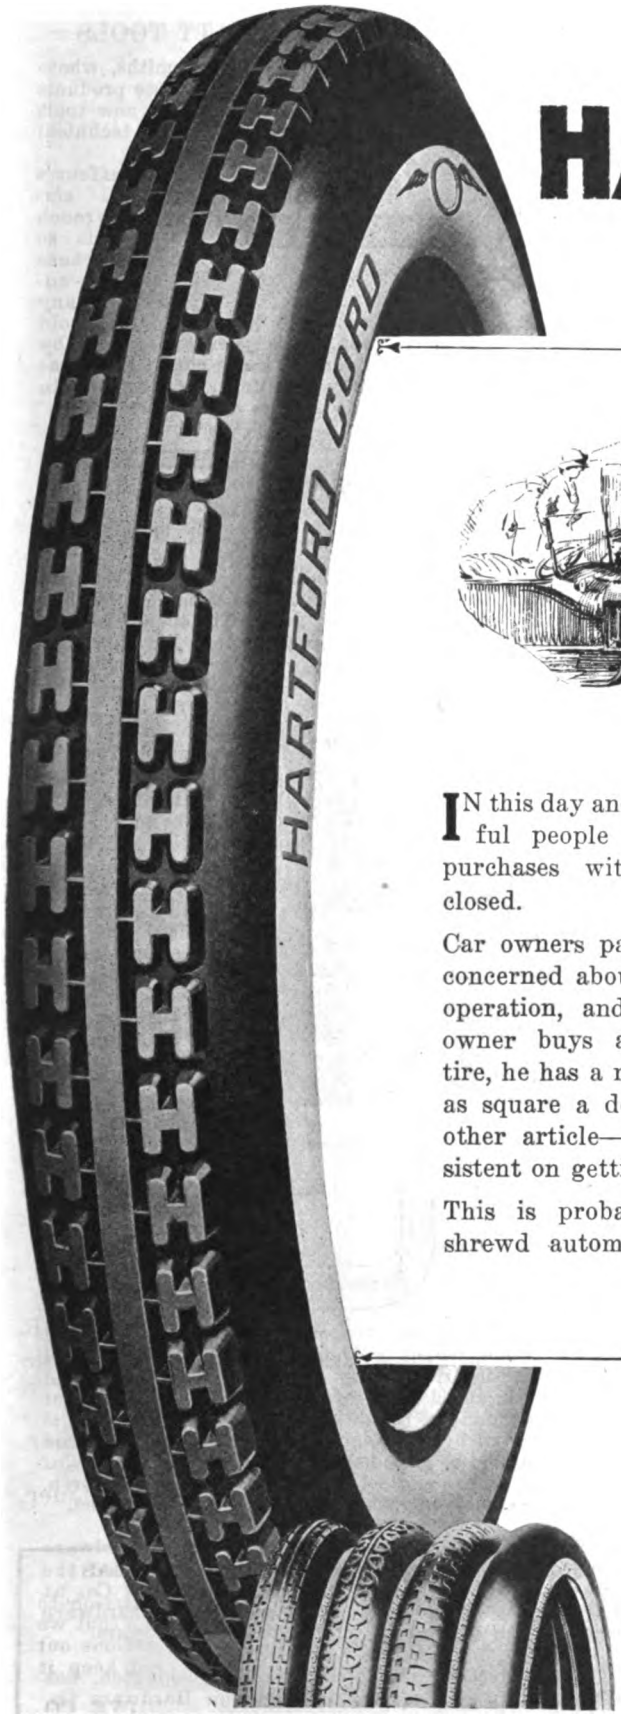
## HARDWARE MAN A GOOD CONTRIBUTOR

"Did you ever contribute to The Atlantic Monthly?" asked the sweet young girl of a Chicago dealer.

"Not monthly—daily," replied the dealer.

"Daily?" echoed the girl in surprise.



"Yes," said the dealer sadly, "last summer, when I crossed to Europe."

**GET MANY HELPFUL BUSINESS IDEAS**

We are enclosing renewal of our subscription to the HARDWARE WORLD, and want to tell you that we get many ideas and business-getting suggestions out of its pages each month. So be sure and keep it coming, as per our check enclosed.

# HARTFORD TIRES

IN this day and age, thoughtful people seldom make purchases with their eyes closed.

Car owners particularly are concerned about economy in operation, and when a car owner buys an automobile tire, he has a right to expect as square a deal as on any other article—and he is insistent on getting it.

This is probably why the shrewd automobile accessories dealer is going to greater extremes in behalf of reliable tires every year.

Giving the public the benefit of long years of Hartford Tire building experience is one way of dealing in service and satisfaction—that satisfaction that comes from the **unswerving** policy that every HARTFORD TIRE, no matter what the size, must be as **good as can be built.**

## GOOD ADVICE FROM ARKANSAS

Our readers no doubt have heard and read with interest of the "Arkansas Traveler," but here is the "Arkansas Fisherman," not one, but a goodly group. This picture was taken on the John S. Williamson plantation on the banks of Maddox Bay in eastern Arkansas, the greatest bass and perch fishing section in the country.

We are indebted to our good friend Hamp Williams for the group. Hamp Williams is in the center of the group; here is his account of the fishing in that region, with a good word of advice to the merchants that do not know the pleasures and profit of the recreation of the rod and reel.

"To catch these fish, you must use energy, alertness and great care. Even after they have been caught, it requires good judgment to land them, but this is the kind of sport and recreation business men need. You do not catch any of these fish with set hooks. They are very much like many people. It takes an attractive bait, well displayed and moving to catch their eyes.

"The first day we caught seventy-five pounds of bass and perch, no bass weighing more than three pounds. The last day we caught more than 150 pounds, the largest weighing five pounds. The longer we fished, the more successful we were—just the same as men grow in business.

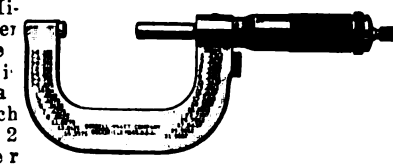
"Every day each man learns more and more how to fish and how to land them. A good merchant makes a good fisherman for game fish. We have too many merchants, however, fishing with set lines. Get a rod, a reel and a few flies and hike away to some good fishing place and give your clerks and family a rest and yourself and look into another world."

---

Some officials seem to have the sleeping sickness when it comes to giving the public information as to the real cost of the war—including the waste and graft.

## FOUR NEW GOODELL-PRATT TOOLS

Goodell-Pratt Co., the Greenfield toolsmiths, whose boast used to be "1500 good tools," but whose products now far exceed that number, announce four new tools especially designed for the automotive and technical workman.



**Chauffeur's** Universal six-inch Wrench No. 595 is so named because it is self-adjusting for any size square or hexagon nut up to ⅝ inch, and will hold round pipe up to ½ inch. The jaws are opened by pressing the trigger and automatically closed by means of a spring. It will firmly grip any size piece within its capacity. The announced price is $2.00.

**Offset Socket** Wrench No. 482 can be used many places that no ordinary wrench will reach. It will be found particularly useful on several places in a Ford car. The handle is polished steel, knurled to give a good grip. The socket is very strong and is broached to exact ⅝ inch hexagon size. The length over all is 10½ inches, net weight, 11 ounces. Price, each, 90c.

**Gimlet Bit** Set No. 577 consists of twelve bits, 1-32 to 12-32 inch, put up in a handy round wooden box, where they are always readily available when desired. This will be found a most convenient outfit upon any woodworker's workbench. Each one of these bits is hand-forged from crucible steel, carefully hardened, oil tempered, and sharpened by hand. Weight, 1½ lbs. Price per set, complete, $2.80.

Two-inch Micrometer Caliper with Ratchet Stop, No. 20R, is graduated to read by 1-1000 inch from 1 inch to 2 inches, either lengths or diameters. Decimal equivalents are etched on the frame, which is drop-forged from a solid steel bar. An eccentric locking device is provided to hold the screw in any desired position. It also has a ratchet mechanism on the thimble in a position where it is easily reached by the fingers of the operator. The end of the thimble is provided with a speeder by means of which the screw can be rapidly run back and forth. Every necessary compensation for wear is provided.

---

W. W. Howell, formerly of the Valley Hardware Company, of Yakima, Washington, has purchased the interest of M. Lentz in the Lentz Hardware Co. at Yakima. Mr. Howell has been a leader in the hardware trade of the Northwest for the last twelve years.

---

R. A. Byrkett of White Salmon, Washington, has sold his interest in the White Salmon Hardware Co. and will engage in the implement and powder business.

## WHEN YOU'VE GOT A GOOD DEAL ON DON'T GIVE THE OTHER FELLOW ANY CHANCE TO SLIP OUT

(Copyright by Elton J. Buckley)

The following inquiry, and the discussion of it, should serve to impress upon business men that when they have a contract that they want to hold, such as a particularly good order, they should be extra careful to comply with every part of it themselves, lest they give the other party a chance to slip out. It applies in any line—hardware or anything you buy. Everybody doesn't do that; I have seen many beautiful deals lost that way:

Cincinnati, Ohia.

Please give your opinion on this. About a year ago we gave an order for ———— to a New York house, which was glad to get it because it looked then as if the market might be going to ease off. The order would have taken about nine months to complete, and we gambled a little on it and as it turned out, gambled right. The market has advanced and shows us a clear profit of $1,200 on our order, when all delivered.

The contract contains a provision for so much delivered each month, payment to be made by the 10th of every month for all shipped the preceding month.

Some of these goods were shipped to us in September, 1919, October, 1919, and on up to last February, and we paid by the 10th of the following month. On the March shipment, however, we did not keep to the contract, because we were short of funds at that time and our relations with these people had been so pleasant that we thought they would grant us a little leeway. So on the 10th of April instead of sending the customary check, we sent a little note stating that we were pressed and would take it as a favor if they would allow us an extra fifteen days. Not hearing from them we believed it all right, and thought no more about it until in about five days we received word that the contract was cancelled because we did not make payment as was set forth in the contract. The biggest part of the contract is still to come forward and if they can do this we stand to lose several hundred dollars. Please advise, suppressing name. R———— & Bro. Co.

Now that is the sort of case I mean. Here was this correspondent with a deal on that would have netted him over a thousand dollars, yet he is so careless that he violates his own contract and gives the other fellow the chance to squeeze out, which he had doubtless been watching for.

In cases where an order for goods provides definitely and clearly for payment in a certain manner, payment must be made in that manner, or the seller can call the balance of the contract off. Naturally he would never want to do this unless the buyer was getting the best of it, which is, of course, the very sort of contract which the buyer should protect.

This rule of law, which is very well settled, applies to all cases where one man sells another a certain quantity of merchandise, for a certain lump sum, shipment to be made from month to month. It does not apply to what are known as severable contracts, that is, contracts or orders which are really a number of orders in one.

For instance, A takes an order from B for 100 cases of canned tomatoes to be shipped during January at $2 a case; 100 cases of canned corn to be shipped during February at $1.50 per case; 100 cases of canned peas to be shipped during March at $1.75 per case. While the whole deal is for 300 cases, there are really three separate and distinct orders of 100 cases each. Therefore, if the buyer fails to pay for the first 100 cases, there is not sufficient reason to cancel the contract for the second and third; the seller must go forward and deliver them because they are practically separate transactions. But if the original order had been for 300 cases of tomatoes, one-third to be shipped each month, and paid for, failure to pay for the first third would then have been sufficient cause to cancel as to the rest.

Sometimes these contracts can be saved. I remember a case in which there was a sale of hardware to be shipped so much a month for four months, payment to be made by the 10th of each month (if I remember correctly) for everything shipped and received during the preceding month. The buyer paid for the first month's installment, in accordance with the contract, but asked for more time on the second. There was some correspondence about it, without any definite decision either way, until one day the market on this product suddenly advanced. The seller then declared the contract cancelled because the buyer had not paid his bill as the contract provided. The buyer took the matter into court, and won—the cancellation was upset. The court ruled that there was some reason to believe that the seller hadn't cancelled because payment had not been made on time, but because the market had advanced, and it sent that question to a jury to decide. The jury said the cancellation was only hinged on the non-payment, its real reason was the advance, and they decided the case in the buyer's favor. In such cases cancellation must be in good faith based on the failure to pay.

If I had a deal on for merchandise which was worth more than when I bought it, which would of course mean that the seller would be delighted to find a way out of it, I should carefully read and re-read the contract or order blank, in order that I might become letter perfect in all that I had to do under it. Then I should sit up nights, if necessary, to do it in exact accordance with the agreement.

**NO WONDER "READ FROM COVER TO COVER"**

We are enclosing renewal of our subscription to the HARDWARE WORLD for three years, and we want to tell you that the HARDWARE WORLD is the one publication we always make a point of reading just as soon as we receive it. There is a personality about it that we greatly enjoy, and the business-getting ideas and suggestions that we receive from its pages are worth a great deal to us. No wonder it is taken home at night and read from cover to cover, for it is valuable to every merchant and salesman, as well as to every manufacturer.

## TIRES AND MEN SHOW SAME SIGNS OF AGE

When numerous small slits and cracks appear in a tire, it is a sign of the approach of old age. A strange thing about auto casings in this respect is their similarity to men and women. While they don't get grey haired, they do become wrinkled and cracked, often chalky white in appearance.

The fabric in an old tire gradually becomes brittle and hard, so that it breaks easily. Like the bones of old people, it is difficult to knit. The tire surgeon's work increases in difficulty with the age of the casing.

Like individuals, those whose strength is conserved do not so readily show their age. The best way to preserve their usefulness is to take care of them.

To hide the effects of age and wear, motorists frequently "doll them up," painting the side walls and washing with cleaning solutions. Others pay no attention to their appearance and permit them to go shabby.

Ordinarily the small cracks appearing on the side walls do little harm, unless they penetrate through the rubber covering to the fabric underneath. It is well worth the motorist's attention to have his casings regularly inspected.

Tires age fastest when lying around. They are kept in best condition in actual service. If it is necessary to store them, they will retain their life longest in an even and moderate temperature and light.

---

## IT'S ALL IN THE STATE OF MIND

"If you think you are beaten, you are;
  If you think that you dare not, you don't;
If you think you would like to win, but can't;
  It's almost a cinch you won't.

"If you think you'll lose, you've lost;
  For out in the world you find
Success begins with a fellow's will,
  It's all in the state of mind.

"Full many a race is lost
  Ere even a step is run
And many a coward fails
  Ere even his work's begun.

"Think big, and your deeds will grow,
  Think small and you'll fall behind,
Think that you can and you will,
  It's all in the state of mind.

"If you think you're outclassed, you are;
  You've got to think high to rise;
You've got to be sure of yourself before
  You can ever win a prize.

"Life's battles don't always go
  To the stronger or faster man,
But soon or late the man who wins
  Is the fellow who thinks he can."

## CASH REGISTER WRITES SALES SLIP

A cash register which prints an itemized and totaled receipt has been placed on the market. For years merchants have needed such a machine. The new register stops mistakes in adding the items of a sale. It also saves the time of clerk and customer, and gives the merchant protection and information about his business.

The old way of adding up the items of a sale by hand, brain and pencil has long been a stumbling block to efficiency in retail stores. With this method, when several articles are purchased, it is necessary for the customer to wait while the clerk adds the items and makes the change. The time required for this work when multiplied by the number of transactions every day, amounts to many hours. It greatly adds to the expense of operating the store.

Then, too, clerks are only human and mistakes will happen. Errors mean losses. If an overcharge is made because of wrong addition, the merchant may lose a customer. If an undercharge is made, the merchant loses the profit on the sale.

### New Machine Saves Time and Work

With the new machine, each item is registered separately. By turning an operating handle, a receipt is printed and issued by the register. This receipt shows the printed amount of each item sold and the total amount of the sale, which has been added by machinery.

The total of each transaction is also printed on a paper roll inside the machine. There are other features that are found in all high grade cash registers. These include adding counters to show the total amount of scales, and the number of customers waited on. The amount of every item sold is shown between glass at the top of the machine.

This register provides quick and accurate service for customers. The items are added and recorded at one operation. In many stores the use of a written check is eliminated by the itemized receipt. The figures are indelibly printed and cannot be changed. Customers have confidence in machine-made records and additions.

### The Receipt Prevents Disputes

The receipt prevents disputes regarding overcharge for any item or for the total amount. It identifies by price any item that may be returned for exchange. The receipt makes public the record of the amount paid for every article bought by the customer. This removes temptation from employes, because all amounts must be correctly registered.

Clerks are finding the new machine a valuable aid in increasing their efficiency. It makes their work easier, lessens responsibility and gives them more time for selling and progress.

The perfection of this register has solved many difficult problems for merchants. It saves time and work and stops mistakes in adding. It gives information and protection that are necessary for the successful operation of a store. Although on the market but a few months, already the new machine is in use in 44 lines of business.

## TYPICAL OF PROGRESS IN THE INLAND EMPIRE

In 1900 H. S. Fender moved to Prescott, Wash., and purchased a small stock of hardware, harness and drugs, the entire stock amounting to about $1500, with a floor space of 1500 square feet.

In contrast and showing the record of progress in the twenty years we are publishing herewith a photograph of the exterior and interior of the store of H. S. Fender & Son at Prescott, Washington. The business is housed in the Odd Fellows building, a modern brick structure 68x80 feet. Our readers will agree that such a plant as that of H. S. Fender & Son is thoroughly typical of the progressive western merchant and does credit to the trade and to the community.

One glance at the exterior suggests order, permanence and leadership in the community. When a merchant houses his stock in a solid, modern building that stands out among its surroundings as does the store of H. S. Fender & Son, that institution commands the respect and confidence of his community.

On entering, the visitor's first impression is borne out in every respect. In accordance with the opportunities and obligations which Prescott places on her merchants, the stock of H. S. Fender & Co. is of a general nature and includes a full supply of household goods. These are not stowed away in a rear shed, or a dark balcony, but are arranged on the main floor, so that the householder will be attracted as he enters. Thus a want is created and supplied at the same time. He who enters to buy a screw-driver leaves behind him an order for a rocking chair or a phonograph.

There are few merchants whose stock includes more items and a more general assortment than that of H. S. Fender & Son, yet the store does not have the crowded appearance. This is because everything is in order, because the reserve stock is kept off the floor and the shelves, and because every member of the organization is working to make the store attractive.

Much credit for the development and progress of the business is due to Mr. Fender's son, C. M. Fender, or "Monte" as he is known. He has been manager since 1909, and in 1918 was made a member of the firm. He is known throughout the Inland Empire as one of the shrewdest, well posted men in the hardware business, and his own hard work and earnestness has been an inspiration to other members of the organization.

One of Mr. Fender's right hand men is W. W. Winkle, an alert, bright, enthusiastic young man who takes as much pride in the business and in the hardware trade as though the business were his own. Mr. Winkle represented H. S. Fender & Son at the last convention of the Pacific Northwest Hardware & Implement Association, and it is through his cooperation that we publish the views this month. All in all, the spirit of H. S. Fender & Son and the advances they have made in the trade should be an inspiration to any merchant.

## INTRODUCING R. J. ROCHE

Our readers will be glad to meet through our pages before they meet him in actual flesh, R. J. Roche, the newest member of the A. C. Riddell organization, whose headquarters will be at Los Angeles and whose territory will include southern California, Arizona and the mountain territory.

Mr. Roche brings to this rapidly growing firm of manufacturers' representatives his intimate knowledge of the electrical sales, which will be invaluable in developing the electrical account of the company, as well as handling their hardware lines.

For the last fifteen years, since his graduation from college as an electrical engineer, Mr. Roche has been storing up knowledge and experience, both as a construction engineer in operations and a theoretical man in electrical lines, as well as a merchandiser and salesman, not only of electrical equipment, but of electrical installations and service.

He has lately been with the Economy Fuse & Mfg. Co., at San Francisco, in the sales department.

## HARVEY SPRING CO.'S CHICAGO BRANCH

The Harvey Spring and Forging Co., Racine, Wis., makers of the Harvey Boltless Auto Spring, have opened a Chicago branch at 3020 South Michigan Boulevard.

T. H. Van Horn, sales manager of the Harvey Spring and Forging Co. says the new Chicago office is in no sense a service station, and will not compete with dealers. It is a factory branch, made necessary by the greatly increased demand for Harvey Boltless Springs.

A corps of representatives sufficient to give adequate service to the trade has been transferred to Chicago from the home office at Racine.

---

John Smith Co., Walla Walla, Wash., have their new building almost completed and will move into it very soon, giving them more room and a display floor that should be a big asset in their implement business.

## NEW APCO PRODUCTS

Two new Apco products, a Transmission Tool and a Gasoline Reserve Valve, are the newest items added to the automobile accessory line of the Apco Mfg. Co., Providnce, R. I.

The Transmission Tool consists of a clamp which holds the transmission band together in perfect alignment and also a drop forged wrench, milled to the exact size of the adjustment. It is attached to the clamp chain and cannot be lost in the transmission case. List price, $1.00.

The Gasoline Reserve Valve holds one gallon of gasoline in reserve and can be put to use by throwing valve spring over a quarter of a turn. When this reserve gas is used the tank cannot be filled until the valve is reset, which is done by turning the valve spring back to its original position.

The Gasoline Reserve is listed at $1.50.

## WHERE THE SHOE FIT

"No," said the old man, sternly, "I will not do it. Never have I sold anything by false representations, and I will not begin now."

For a moment he was silent, and the clerk could see that the better nature of his employer was fighting strongly for the right.

"No," said the old man again, "I will not do it. It is an inferior grade of shoe, and I will never pass it off as anything better. Mark it "A Shoe Fit for a Queen," and put it in the window. A queen doesn't have to do much walking."

---

Do, but don't overdo.

**I Want to Buy a Good Hardware Manufacturers' Agency**

**REQUIREMENTS:**

Accounts must be standard and sell to the **Jobbing Trade only.** Can handle territory from Denver west—or any part of it. If you want to sell out, write me at once.

***Also would like to hear from factory agencies who have assigned to them but do not cover either San Francisco or Los Angeles, or both. I have offices in both cities with salesmen continually covering the hardware and accessory jobbing trade. On a standard line I could offer sub-representation for Northern or Southern California that would be mutually profitable.***

## THE BOYLE MANUFACTURING COMPANY OPEN OFFICE AND SALESROOM IN SAN FRANCISCO

The Boyle Manufacturing Company of Los Angeles, Willis J. Boyle, Sr., founder and president, announces the opening at 21 Sutter Street of general offices and salesrooms, where they will occupy the entire third floor, under the charge of Thomas M. Gardiner. A full and complete line of Boyco products will be on display at all times for the benefit of the jobbing trade and their customers.

Boyco products, being leaders in their line, are sold by practically every hardware, auto accessories, sporting goods and other jobbers of the United States, and need no word of praise as to their quality and construction. The opening of their new offices no doubt will be welcomed by the buyers of the West.

In addition to the display of their Canteen, Luggage Carrier and Service Unit line, will be carried a full line of oil companies' gasoline station and garage equipment; riveted and welded high pressure air tanks; steel oil, lime and cement shipping barrels; garbage cans and other nationally known Boyco products.

From the many inquiries coming in to their office, jobbers and buyers of the far East and southern states, as well as Canada, are looking forward with interest to making their purchases for their 1921 needs in Chicago, where Boyco products will be on display at the Automotive Show, to be held at the Coliseum, in Chicago, from November 15 to 20, which will also be visited by most of the prominent buyers of the West, who no doubt will enter many contracts with this progressive institution.

## DIPPERS, CUPS, FUNNELS IN IRON LINE

The Rochester Can Co., of Rochester, announces they have just added to the Iron Horse Line a new assortment of non-rust dippers, cups and funnels. The dippers are made with long and short handles, and run in sizes from No. 700, with one pint capacity, to No. 703, with three quart capacity. The cup is an exceptionally heavy one, made from heavy galvanized sheets, with wire reinforcements at the top, the bottom double seamed on.

The funnels are made from heavy galvanized metal, carefully seamed and hand-soldered, and range in capacity from one pint to four quarts. These items of course are in addition to the complete line long known to the trade. One of the features of the Iron Horse Metalware is the complete line of garbage system for the home. The indoor sink garbage pail and outdoor underground garbage pail.

W. H. Dunlap, formerly of the Holley-Mason Company, has taken the retail agency in Spokane and Hillyard Counties, Washington, for the Monitor Stove Company, of Cincinnati, Ohio. The Holley-Mason Company are jobbers of Caloric furnaces in eastern Washington and northern Idaho.

## NEW SOUTHERN CALIFORNIA JOBBERS

The American Ave. Hardware Company at Long Beach have entered the jobbing business in southern California territory, specializing in builders' hardware and tools. John F. Haasis, president, has been with the business since 1917.

They plan to discontinue the retail business and confine themselves altogether to the wholsale business. Seeley B. Mowe and E. C. Hutchinson, formerly with the Union Hardware & Metal Company, have been added to their force.

Mr. Hutchinson was sales manager for the Union Hardware & Metal Co. the past year, and will fill the same position with the American Ave. Hardware Co.

Seeley B. Mowe, secretary of the American Hardware Co., will continue his former position as buyer.

Other officers of the company are: Theo. L. Haasis, vice president, and Roy W. Orris, treasurer.

## ARE YOU OBSERVING GENCO WEEK?

Just to remind the trade that the week of November 8th to the 13th, is Genco week, dedicated to the Geneva Cutlery Corporation in featuring the Genco Razors.

The prizes will be $1000.00 in cash, which will be distributed for the forty-six most attractive window displays during the week. Aside from the cash prizes merchants who participate will find an increasing trade in all lines.

## MAKING DOMES OF SILENCE ELOQUENT

The display of merchandise is always a problem to the merchant. This is particularly true of what may be called incidental articles. Small in themselves, such items do not always readily lend themselves to display, with the result that they are pushed aside for more showy lines. This is many times a mistake, for such lines often carry a very good margin of profit for the retail merchant.

The distributors of Domes of Silence realized this difficulty and have recently made up a display which is now being used by a number of New York stores, in our judgment one of the best of its kind that we have seen.

It is simple in construction, packed in a felt lined case, so that it can be shipped from point to point and is readily erected by the display man or clerk. The background of the display is a three fold screen with a lighting fixture back of it to assure attraction value. The two sides of the screen show what Domes applied to furniture will do for the housewife.

The center background is decorative, with a center panel of an everyday family scene. The whole is executed in oils and the size of this screen opened is 6 feet 5½ inches, and the height is 4 feet 8½ inches.

## DIXON'S PASTE BELT DRESSING AND LEATHER PRESERVATIVE

Dixon's Traction Belt Dressing preserves the leather and restores the lost efficiency and clinging power of neglected belts. It likewise gives new belts elasticity and flexibility, so that only a heavy over-load can cause them to slip.

Dixon's Traction Belt Dressing imparts clinging power, not stickiness; does not readily gather dust, and thoroughly waterproofs the leather.

In paste form, to be applied warm in small quantities. One pound of dressing should put 80 square feet of leather belting in proper order.

It is also an excellent dressing for manila transmission cables (except those having a metal core). It penetrates into the cable, waterproofs the fibres, keeps them flexible and prevents rotting.

The Ballinger Hardware Company of Boardman, Oregon, has moved into new quarters, and report the outlook for the year particularly promising.

## DO YOU KNOW ABOUT TIRE CONSTRUCTION?

Why does the motorist never oil his tires? Road wear, chafing and constant flexing would seem to demand oiling. Automobile bearings and all working parts of a car are oiled against friction. Why no oil for a tire?

The fabric carcass of the tire is much like the human body. For one thing it is self-lubricating during its life. The breaker strip is its back bone. Plies of fabric are the ribs, and the rubber between them, like muscles, hold all parts together. The fabric carcass gives strength and shape. Friction gum is the lubricant.

Like the human body the tire may look good on the outside, but be "shot" inside. Its greatest enemy is under-inflation. Abusive treatment causes so much bending, flexing and chafing, that the carcass, in spite of its enormous strength, is unable eventually to bear up and is broken and torn.

In the fabric tire, the carcass is constructed of inter-woven strands of cotton. Fabric is built up layer upon layer, each thoroughly impregnated with rubber. The number of these plies, each of which is cushioned, depends upon the size of the casing. The earliest successful tire was a fabric.

The cord carcass is constructed of layers of cords which run parallel in each ply and are not inter-woven. The number of plies, each of which is run at right angles to the other, varies with the size of the tire. So strong are the carcasses that they are able to stand blows that mount well up into the tons.

When the motorist takes care of his tire, he is keeping the carcass to perform its duties properly. The tread will give him maximum wear; the side walls will protect from the elements; the beads anchor the carcass to the rim; and the breaker strip will break the force of the blows.

## McGINNES GOES WITH INDIA CO.

J. E. McGinnes, widely known in the tire field, has been placed in charge of sales promotion work for the India Tire & Rubber Co., of Akron. He brings to his new position extensive experience not only in the development of tire distribution but also in the executive department of sales work. He was formerly branch manager for The Firestone Tire & Rubber Co. in Milwaukee. He also established a wide acquaintance in the trade as manager of tire sales for The General Tire & Rubber Co., of Akron, Ohio.

## SHOWING THEM WHAT WAS WHAT

New Curate: "What did you think of the sermon on Sunday, Mrs. Jones."

Parishioner: "Very good indeed, sir. So instructive. We really didn't know what sin was till you came here."

## R. W. EASTLICK ABSORBS ORDERS FOR ABSORENE

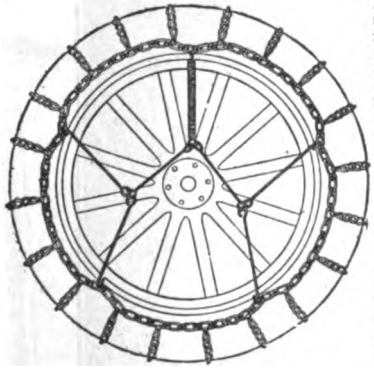
One of the livest representatives of eastern manufacturers who have become identified with the West is Ross W. Eastlick, of the Absorene Mfg. Co., St. Louis, Mr. Eastlick has vision enough to realize that he has a chance in more ways than one in "cleaning up" the West, in his own interest and that of his company, and he is going about it in the right way.

It has been only recently that his work took him West with Absorene; previously the bulk of his experience was in the grocery line. For fourteen years he was a representative of the James C. Smith Co. of New York and Chicago, traveling throughout the Mississippi River Valley, selling fancy groceries. Later he was located in St. Louis as general sales agent for several foreign concerns. Two years ago the condition of Mrs. Eastlick's health made it necessary for them to move to California and Mr. Eastlick settled in Pasadena. From this point he conducts his business, placing Absorene wallpaper cleaners and H. R. H. paint and woodwork cleaners in hundreds of retail and wholesale grocery, paint and hardware houses throughout the West.

Only the shortage of goods prevented a further distribution of the Absorene powder. Absorene powder is used extensively in cleaning "not only wallpaper," but for window shades, white and other delicate shades of painted woodwork, straw and felt hats, and kid gloves.

Their interesting announcement is found in our pages.

## WHY IS A SAD IRON "SAD"?



Because it's heavy. Sad is an old English word and one of its meanings is heavy. Whoever first adopted this word to the domestic flat iron must have done so on account of its compact and ponderous character.

Items of interest about your merchandise is the greatest help in creating and holding attention of a customer during your sales talk. Tell him something that he does not know about the merchandise and he immediately gives you his attention and your arguments take on weight.

The Industrial Hardware Company is a new firm at Torrence, California. Manager H. C. Gardner has had many years' experience in the hardware business in southern California.

## QUARTET OF THE SUNNIEST SOUTHERN CALIFORNIANS

The entire United States and most of the civilized world knows all Southern Californians are boosters and not without just cause for their boosting.

E. S. CAMPBELL

We are glad to introduce visually to the hardware trade some boosting Southern California hardware men. Every one of these men are fountains of energy in themselves. They are boosters of the most approved, healthy and sunny variety.

WILLIAM SCOTT

E. F. HARFORD

J. G. MARKS

President E. S. Campbell, of Campbell & Ward of Los Angeles, and Vice President William Scott of the Scott Hardware Co., Los Angeles, are two representative and wide-awake hardware men who have the added advantage of doing business in a community that is noted for its aggressiveness, for "pulling together," and for cooperation and local pride among all of its merchants.

Vice President E. F. Harford is manager of the Hub Hardware Co., at Colton, and reports the outlook at Colton particularly bright, business is brisk and the only difficulty is getting hardware to supply the growing and active community. Former Secretary J. Glen Marks is one of those loyal, faithful members of the trade, whose enthusiasm and friends among the hardware fraternity called him into the service of the entire trade as secretary of the Southern Division of the California Retail Hardware & Implement Association. He has but recently resigned, after doing splendid work.

Monthly meetings are held on the third Wednesday of each month. There is always a discussion of problems of importance to the retail dealer, as well as social and friendly contact for the members of the trade.

## DAZEY ELECTRIC BUTTER CHURNS

The new electrically operated churns which have recently been put on the market by the Dazey Churn & Mfg. Co. of St. Louis, are built along the same lines and embrace the same features of the Dazey hand churns.

The motor churn has a higher base than the hand churn for the purpose of mounting the motor underneath the churn. This high base also allows space for a bucket to be placed beneath the faucet for catching the buttermilk. The gears are enclosed in an easily removable housing. The extension cord from the motor passes through one of the side rods, keeping it off the floor and out of the way. The receptacle and dasher are removable for convenience of cleaning. Finished in blue enamel and aluminum bronze—a very attractive color scheme.

## CATTLE COMB A FRIEND OF STOCKMEN

The Chicago Flexible Shaft Company, 5600 Roosevelt Road, Chicago, Ill., manufactures the "Stewart Cattle Comb — a timely article in this season of cattle shows and sales.

This high grade comb is substantially made, heavily nickel-plated, highly polished, and fitted with "easy grip" ebonized wood handle.

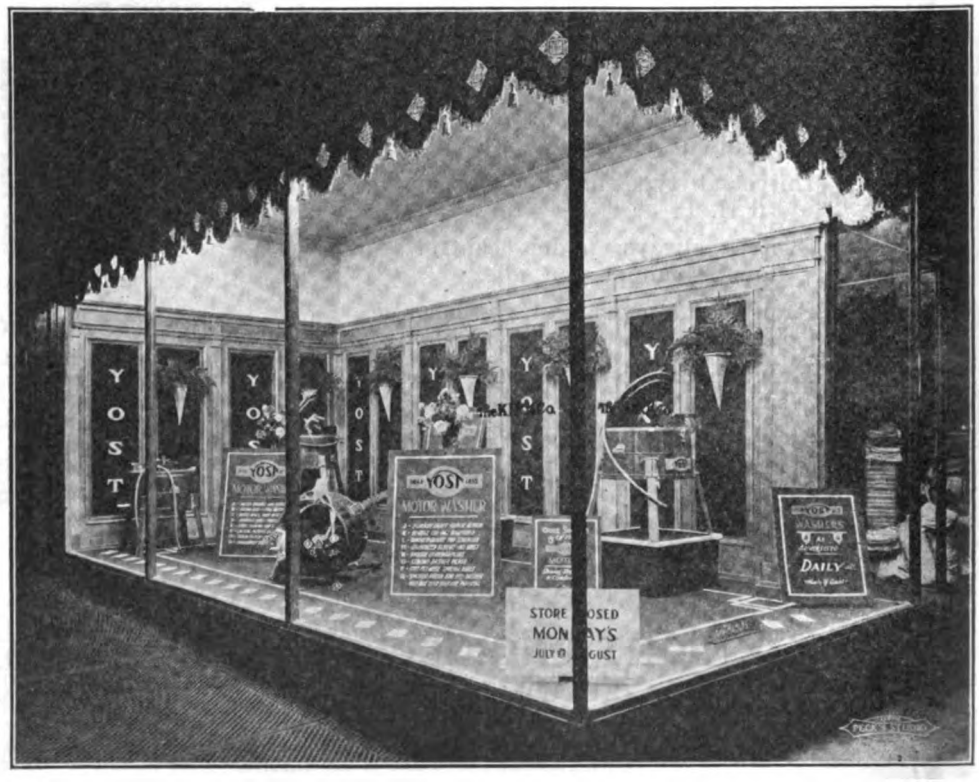
With this comb the herdsman or caretaker of cattle can greatly improve their appearance by causing depressions in the coat or filling out where needed, and shaping the entire outline so as to effect a perfect and symmetrical blending of all parts.

---

The patrons of Race & French, progressive merchants at Lindsay, California, are congratulating them on the fine new quarters, which were specially constructed for their requirements. Besides a large storage basement, and cement-floored storage room in the rear, the store itself has every modern convenience and latest equipment.

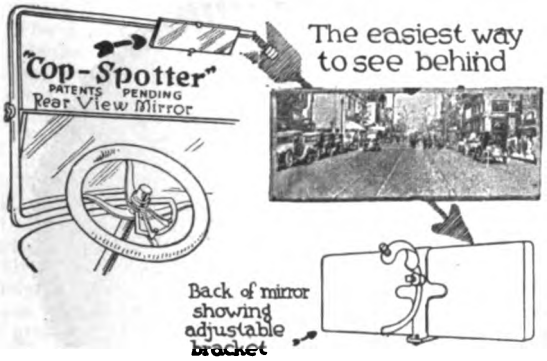
---

Fiorio & Figoni of 1351 Grand Ave., San Francisco, have opened a branch store at 4799 Telegraph Ave., Oakland. They will handle a full line of builders' hardware, housefurnishings, paint, auto accessories, etc. They will handle the Russell & Erwin line of builders' hardware.



---

## "CASHING IN" ON THE WASHER TRADE



This window display recently made by the Kirk Company at Akron, Ohio, is one of many similar displays that have resulted in popularizing the Yost Gearless Motor Washer, thereby producing satisfactory sales and attractive profits.

Charles K. Gross is the advertising manager of the Kirk Company and gives these features his special attention by co-operating with extensive newspaper display advertising. When the increase in sales is considered, this advertising effort is more than justified.

Mr. Gross will surely be glad to answer any questions you may have regarding this line of publicity. The opportunities are just as good for every dealer as they are for the Kirk Company. It is simply a question of "Cashing in" on them.

## AN INSERTED TOOTH METAL SAW

An inserted tooth metal saw which promises to meet a long felt demand, has been invented, and is being placed on the market by the Simonds Manufacturing Company of Fitchburg, Mass. This saw which is designated as No. 000, was especially designed to meet the requirements for a saw to cut structural iron, I-beams, channels and stock with thin walls that could not be cut as successfully with other saws of similar design, because the pitch or spacing of the teeth was not fine enough to keep two teeth in the cut at all times in this work.

This new saw, through its arrangement and closer spacing of teeth, provides for smoother running and eliminates chatter which is often noted where the teeth are placed further apart in the plate. It is a fast cutting saw and is fitted with as many teeth as it is possible to securely fasten into the plate in the Simonds proven method of holding, and at the same time retain the perfect alignment of teeth and strength of plate necessary to stand up and cut true. These saws are being made from 10 inches in diameter with kerf of ¼-inch and maximum of 40 teeth, to 50 inches in diameter, 15-32-inch or 7-16-inch kerf with 210 teeth as the maximum number.

## BUFFALO STANDARD HEATER CATALOGUE

Catalogue No. 460 of the Buffalo Forge Company treats with an admirable thoroughness the standard heater lines of the company. It has been prepared with a view of making it useful to architects and engineers in figuring heater requirements with the fan system of heating and ventilation. It not only contains an account of the Buffalo Heater, but with various dimensions and detailed analysis of system, and is also a valuable table and graphic chart of great assistance to the heating and mechanical engineer.

It is in reality an engineer's formal hand book, dealing partially with heating appliances of every nature and particularly with the Buffalo line. No engineer should be without it.

## POPULAR SOCKET AND ANGLE WRENCH INVENTED

Louis Berk of Alstown, Washington, has invented and perfected a new socket and angle wrench especially adapted for use by automobilists in removing rim and hub nuts. Although only 24 years old, Mr. Berk has done considerable inventing. He recently built a farm tractor from miscellaneous materials, on the farm where he does all the repair and mechancial work.

Digitized by Google

## WOOLWINE PRODUCTS WIN

There is a certain personality connected with the Woolwine Metal Products Co., manufacturers of the "Bear Brand" sheet metal products, whose announcement appears elsewhere in this issue.

That personality and stamp of individuality is Wood R. Woolwine, president, general manager and founder of the company.

The history and growth of the company is interesting, Mr. Woolwine being a southerner, grew up and lived in Nashville. He knew nothing of the sheet metal business, or the allied trade. He moved west a little more than ten years ago and decided to enter business. Looking about him, he decided to enter the sheet metal business as there was no manufacturers of stamped steel ceilings in Los Angeles at that time.

He took the advice of a mechanical engineer, erected a plant, installed machinery to make ornamental steel ceilings, galvanized pipes, elbows, etc.

About three years ago the name was changed to the present one of Woolwine Metal Products Company. The growth of the company was steady until the last year or two, when it became phenomenal. Additions to the plant have doubled its capacity until it covers several thousand square feet of floor space, employs 100 workers. It is equipped with modern machinery, and turns out a line of sheet metal and allied products that is as complete as it is distinctive. Besides ceilings and pipes which were formerly and are still made, they manufacture galvanized pails, cans and various metal products. The latest addition is the Bear Brand Lincoln Auto Canteens for motorists. The diffe ent grades of canteens are of galvanized metal, double seamed and soldered, which i the strongest possible construction. The sizes run from one quart to ten quarts.

The new improved "Bear Brand" canteens are double seamed to the body, which makes the canteen very strong and does away with soldering. The base of the canteen is reinforced by an extra piece of metal which is fastened into the channels formed by the double seaming of the sides. This double bottom gives extra strength to that part of the canteen which receives the greatest amount of wear.

The Omer Cox organization, with offices in the principal western cities, are the enterprising sales representatives, and through their aggressive campaigning are obtaining a nation wide distribution. They will gladly give full information to anyone interested.

## NEW UNION SALES MANAGER

A. B. Stewart has been appointed sales manager for the Union Hardware & Metal Co., at Los Angeles, succeeding E. C. Hutchinson, who has resigned.

Mr. Stewart has been the chief assistant in the sales department for some time and is thoroughly familiar with the trade..

## AN ICE CREAM FREEZER WITH A HOLDER

Rugg's Freezer Holder will appeal to many practical housewives, for it makes ice cream freezing easy.

The holder is simply but strongly made of hardwood, with an oil finish. Metal parts are galvanized to prevent rusting.

The freezer is firmly fastened to the holder by screws and an iron hoop at the upper end of the posts. It is made by the Rugg Mfg. Company, Greenfield, Mass.

The Canadian company, known as the Rugg-Ball Mfg. Company, Ltd., Ayers Cliff, Quebec.

The Rugg Mfg. Co. also manufactures hand, hay and lawn rakes, vine supports, handles delivery and fruit crates and a full line of snow shovels.

## VACUUM CLEANER GUIDE BOOK ISSUED BY LANDERS, FRARY & CLARK

Landers, Frary & Clark realize that their work is not over when a dealer sells a Universal Electric Vacuum Cleaner. They have published a very valuable booklet, "How to Use and Care for the Universal Electric Vacuum Cleaner," which has inspired much comment from the distributors and trade in general, and it has helped make sales and backed up sales with service.

The book is liberally illustrated with views showing the different uses to which the cleaner may be put, and also how to take care of the cleaner.

## NEW ELECTRIC WRINGER WITH WASHER

A new Federal Electric Washer has been placed on the market. After long and patient research and experimentation, the "Roto-Phor" swinging wringer, with which the washer is equipped, was perfected.

A strong nickel-plated lever sets the electrically operated wringer in motion, either forward or reverse. Another lever permits it to swing easily in any direction and it automatically locks in any of the working positions.

The Federal Electric Washer employs the most efficient principle of washing. The rocking wooden tumbler, suspended in a tub full of soap-filled water and the swirling suds flowing through the perforations, quickly removes the dirt from the clothes. The body is made of Armco Ingot Iron, which resists rust. The tumbler holding the clothes always stops with the cover on top. The addition of the "Roto-Phor" wringer to the Federal gives it distinct points of merit. The Federal Electric Company still makes washers with the stationary wringer.

## PASSING OF A. H. STUTSMAN

The hardware trade of Los Angeles lost a strong and able member in the passing of A. H. Stutsman, president of the Stutsman Hardware Co., last month.

Although Mr. Stutsman has been long in the hardware business, nevertheless was a comparatively young man, and his death was in all respects premature.

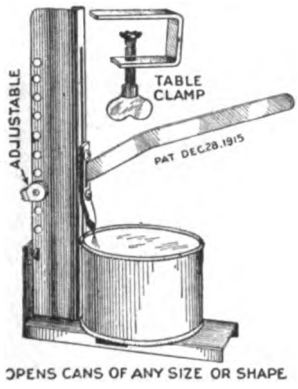
A scratch on his hand developed an infection and blood poisoning set in and his death was sudden. It was a great blow to his many friends. The Southern California Hardware & Implement Association at Riverside, paid him a just and touching tribute.

Profit by Big Christmas Sales of

National STEAM PRESSURE ALUMINUM COOKER

With the approach of Christmas, women everywhere are looking forward either to giving or receiving NATIONAL STEAM PRESSURE ALUMINUM COOKERS as holiday presents. National advertising, as well as thousands of satisfied users, have sold them on this remarkable cooker, which saves time, labor, and fuel.

Dealers who take advantage of this by displaying the NATIONAL STEAM PRESSURE ALUMINUM COOKER in their windows and on their shelves, are cashing in big.



The modern housewife has only to see the National to want it. She does not need urging—she buys on sight.

Hotels, restaurants, hospitals, boarding houses, in fact, all institutions where food is served, also offer a ready market for the sale of this great utility. On one burner, over a low flame, a whole meal—meat, vegetables, and dessert—can be deliciously prepared in the NATIONAL STEAM PRESSURE ALUMINUM COOKER. Steam, driven by a pressure of from one to thirty pounds, rapidly penetrates the food and completes the cooking process in one-third the time, and with one-fourth the fuel ordinarily consumed.

Take advantage of the big holiday demand. Get in touch with your jobber. If he cannot supply you with NATIONAL COOKERS, write us direct and we will take care of your order, allowing generous discount on prices.

OPENS CANS OF ANY SIZE OR SHAPE

## A WORTH WHILE CAN OPENER

United Royalties Corporation, 1133 Broadway, New York, have long made five different can openers and say they believe they fully realize that no can opener yet marketed for a few cents, has been satisfactory to users. They now bring out Saturn Stationary Can Opener and a glance at the cut will show it is the simplest thing in the world to operate. Not necessary to have an assistant hold the can, but simply set it on the platform, adjust the cutting blade to its height and work the pump handle, turning the can with the left hand. Cans of any size or shape are quickly cut without any possibility of accident. They say their experience proves that nothing the kitchen uses, has been more demanded than this kind of an opener.

## 365 SHAVES WITH ONE BLADE

A new razor, the Leslie Shaving Outfit, claims a blade that lasts a year at least, and in fact far longer. The manufacturers have produced a blade that has a diagonally stropped hollow ground cutler's edge, made of molybdenum alloy steel.

The use of molybdenum alloy steel for razor blades is new and of interest. Molybdenum had been used for some years abroad for high-speed steel, but as it had never been discovered in commercial quantities until a very few years ago, it was classed as a rare or semi-precious metal in its early development. The location of a vast quantity of molybdenum-bearing ore in Climax, Colorado, that will supply steel manufacturers with all they need for thirty years or more, gave new impetus to the development of molybdenum alloy steel.

A fine tribute to the broad-minded and considerate policy of Geo. H. Webb, proprietor of the Webb Hardware Company at San Diego, California, in guarding the interests of his employes, recently appeared in the Labor Leader, the union labor paper of San Diego. Mr. Webb makes a point of employing union men and selling goods with a union label on them whenever it is possible.

## A PROFITABLE PERCOLATOR

The percolator manufactured by the Illinois Pure Aluminum Company, Lemont, Illinois, herewith illustrated, is one of their specialties. It is an article that is handled by all the leading house-furnishing stores of the country. It is used frequently for special sales. The old reliable Illinois Pure Aluminum Company, make a specialty of aluminum percolators and are prepared to turn them out in unlimited quantities at exceedingly attractive prices.

The aluminum percolator illustrated is only one of their line of popular department store specials and it is well worth any dealer's time to get into communication with them or their jobber for further information pertaining to their full line of "American Maid" Aluminum Ware, whose advertisement you will find in this issue.

## OH-KAY SCREW DRIVER ASSORTMENT

The Bridgeport Hardware Mfg. Corporation, through C. W. Gause Co., their western sales agents, report that the trade is showing particular interest in the Bridgeport Oh-Kay Screw Driver, which is said to be a strong, reliable tool, retailing at the popular price of twenty-five cents. The No. 55 assortment consists of two dozen Oh-Kay Screw Drivers, 8, 4-inch; 8, 5-inch, and 8, 6-inch, packed with an attractive, heavy cardboard stand, which displays one dozen at a time.

## PROMPT DELIVERIES ON STAR HEEL PLATES

The Star Heel Plate Company, Louis Sacks, Inc., 357-391 Wilson Avenue, Newark, New Jersey, report that they are in position to make prompt shipments of their well known Star as well as Boston and Victor Heel Plates, also guaranteed stands and lasts, cobbler outfits and shoe repairing tools. O. A. Gilmore, their western traveling representative, has just made a successful trip throughout the territory.

## NEW AUTOSTROP SETS

Silver-plated Set No. 700

Two new AutoStrop sets have been announced by the AutoStrop Safety Razor Company as ready to go on the market.

As illustrated herewith, the silver plated set is compact in a flat top case. The case is engine turned with a ribbon pattern and is velvet lined. The razor is silver plated, with twelve blades in a plated blade box, and selected strop. The silver plated set retails for $10.00.

The sterling silver set No. 800 is in a genuine leather case of black or brown calf skin, velvet lined. The AutoStrop razor is sterling silver with 12 blades in a sterling silver blade box. The sterling silver set retails for $25.00.

Sterling Silver Set No. 800

## EDUCATIONAL WORK BY WASHINGTON MERCHANTS

The retail merchants of Washington are strongly organized into the Washington State Retailers Association, which is looking after the interests of merchants during these critical times. The association was recently formed in Seattle.

A feature of the association's work has been an educational campaign throughout the state. Dr. W. J. Hindly, educational director for the association, has appeared before 103 audiences in all parts of the state, familiarizing the people with the problems of the retailers and urging improvement in the present system of distribution, rather than its tearing down and setting up of an untried system.

## NEW WESTERN REPRESENTATIVE

The Cincinnati Tool Company of Cincinnati, Ohio, announces that A. C. Riddell will henceforth represent them before the wholesale buyers of the West as a direct factory reprsentative, with offices in San Francisco and Los Angeles.

## FAR WESTERN MADE HARDWARE

Another of the manufacturers who are finding it well worth their while to manufacture hardware lines in the far West are Niesson Bros. & Co., whose factory is at 3155 Army St., San Francisco. Their line includes fiber washers, cylinder keys, snap latches and cylinder locks, etc. All these goods are made by modern machinery.

John and Rupert Niesson are the proprietors. Sales Manager Oscar Oppenheim, who was for many years representative for the Columbian Hardware Co. in the far West, and later with A. W. Pike & Co., for the last five years has been connected with the Niesson Bros.

Jones & Jones have taken over the Bixler Hardware Store at Des Moines, New Mexico.

B. F. Wells of Oskaloosa, Iowa, and George S. Uebele of Tomah, Iowa, are the proprietors of the former hardware and furniture business of J. W. Hockaday at Ontario, California. The firm will be known as Uebele & Wells.

Charles L. Featherstone western representative and distributor for the Globe Stove and Range Company of Kokomo, Indiana, is now receiving his stock of stoves, ranges and pipeless furnaces and will be located at N. 813 Monroe St., Spokane, Washington.

The Filer Hardware Co., at Filer, Idaho, was one of the heaviest losers in a recent fire, their losses being estimated at $125.000.

Moran & McWhinnie Hardware Co., Hermosa Beach, California, expect to move into new and enlarged quarters soon, which are rapidly being finished.

The hardware department of the Parish store was purchased by R. E. Hyde of Visalia, and will be conducted under the name of the Visalia Hardware Store.

A. H. Skinner & Co., at Chula Vista, California, do effective advertising in their local paper by taking space to insert items concerning recent sales, naming the purchaser.

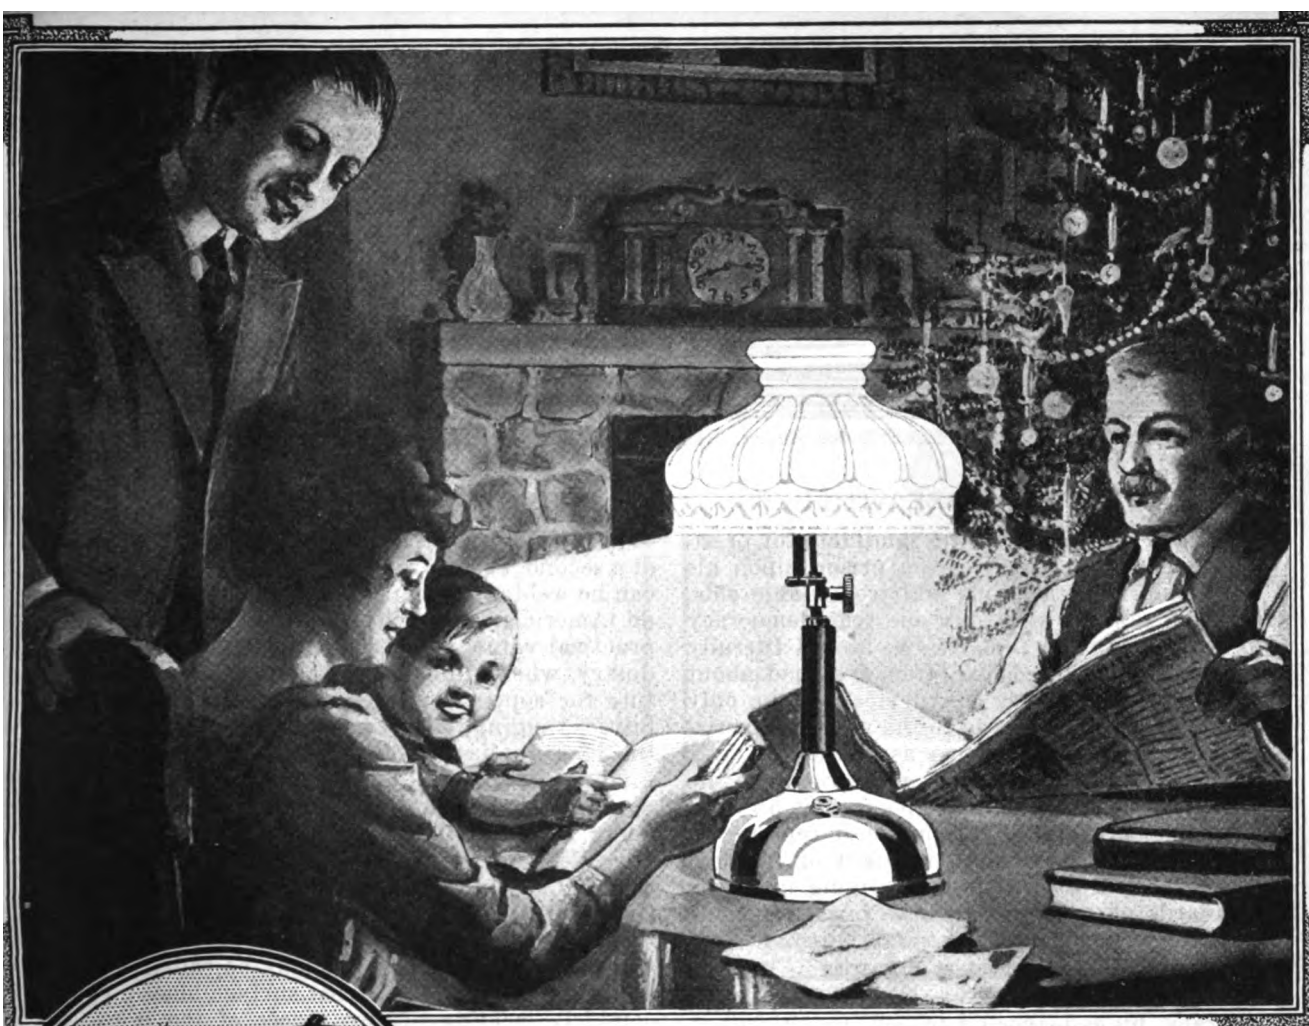
J. L. Jordan is the new proprietor of the Allen & Dealy Hardware Store at Tucumcari, New Mexico. He was formerly a traveling salesman for a wholesale hardware house in El Paso.

E. L. Palmetier & Son are enterprising tire and accessory merchants at Douglas, Arizona. They recently moved into larger quarters. They expect to carry a larger stock of accessories.

### APPRECIATION FROM PACIFIC NORTHWEST SUBSCRIBER

Although I am at present out of the hardware business, I am enclosing you renewal for my subscription. I want to tell you one of the good things about the HARDWARE WORLD, and that is, even if a man is not in the hardware business, it is most interesting for everyone. It is a splendid piece of literature.

Anyone who has ability, ambition, and desires to rise in the world, finds the business-getting suggestions and ideas in its pages more than worth while. Certainly there is a great deal to stimulate, encourage and develop initiative and ability in it. and there is more good reading matter than in any publication I know of .



I have found so much of good in both prose and poetry, that it has developed my thoughts toward reaching the goal. Life would be gloomy and hard indeed if we could not read.

I am writing this to you with a feeling of gratitude, and if I do not pay up promptly, let me know.

Believe me, yours very sincerely,

RAY I. HOLLINGER.

# Plumbing and Heating

## FOR ONCE WE AGREE WITH DEBS

Eugene Debs, Socialistic candidate for presidency, confined in a Georgia prison, upon his conviction for traitorous and treasonable acts, has well said there is only one true democracy in the world, and that if "we would literally follow what has been so often preached about making the world safe for democracy the only nation that really is true to the name is Russia, and that we must become as Russia."

The United States has not grown to its present position by holding up any such an ideal or standard, rather as a republic or representative form of government, its light of freedom has been shed abroad through living up to its standards of a republic whose laws are made by elected representatives.

**An Experiment at Primaries**

We have, in a way, experimented with democracy, by endeavoring to get our citizens to select candidates for office at primary elections rather than leave it to the old convention method, which was so often dominated by professional politicians, but in every section of the country results have been the same: the total vote at the primary is less than half the regularly registered voters. It would seem to indicate that not half the people take sufficient interest to express their choice for candidates at primary elections. They either are indifferent or they do not want to take the time to inform themselves.

"Democracy" sounds well in theory and such a slogan has of recent years been in almost every mouth, but it does not seem to work in actual practice. As Grover Cleveland once said, "It is a condition and not a theory that confronts us."

Do we want the democracy which means another chactic Russia dominated by men of the Soviet class?

---

An enthusiastic person, when guided by a sense of justice toward others, is usually a great asset in any organization, business, family or community.

---

A man in Ohio had a strong civic spirit, and when he died he left all he had to the city. All he had was a wife and nine children.

## THE WELDING OF ALUMINUM

Provided it is all done in the thousandth part of a second, exactly as if by lightning, aluminum can be welded perfectly. This late discovery of an American research laboratory has a wide practical value, most of all in the electrical industry, where aluminum is adopted as a substitute for copper, and has manufacturing possibilities ranging from jewelry to cutlery, because the idea applies to the welding of almost any kind of metal.

Aluminum welds are an old story, scores being announced every year, but the experts have not conceded complete success to any of them. Usually these welds have seemed fine at first, but have displayed weakness after a few months. Aluminum in the air forms almost instantly a thin coat of what may be called rust, and the presence of this rust surface blocks the complete welding of two pieces of the metal. The new welding idea is to have the operation all over before the air can get in and do the damage.

Under this new system the two aluminum pieces—wire, for instance—are placed in a drop hammer. One wire end is held stationary at the base of the hammer and the other wire is attached to the drop, so that when the hammer drops the two ends will jam together.

An electrical apparatus is attached which will send through the wires a very heavy charge of electricity exactly at the instant they touch, but which will not last much more than one ten-thousandth part of a second. This is a close imitation of ordinary lightning.

Thus when the hammer drops the wires come together with a bang, the electricity shoots through, and the ends of the two wires are melted instantly into a vapor. The melting, however, applies only to the very ends of the wires, and as the current does not continue the melting stops in a fraction of a second.

—Saturday Evening Post.

# Bathroom Fittings Good Selling Line

**Interior Displays and Advertising Will Sell a Highly Profitable Line**

Bathroom fixtures are always in demand and the dealer who keeps them where people can see them and who occasionally lets the public know through his advertisements that he has a good stock from which to choose, finds no trouble at all in keeping them moving.

There is an unceasing demand for bathroom equipment. Dealers state that they find people not only willing to pay a fair price for quality fittings, but demanding them. The dealer who is in a position to show the man who is building a new home an assortment of bathroom accessories that will make not only for beauty, but for service and comfort, can cash in on some good trade and one that carries a nice profit.

Those dealers who got busy and studied the building situation in their district and then stocked accordingly have done well with bathroom equipment. Some of the larger firms have found it an excellent plan to arrange a model bathroom showing the fixtures in position. By taking home builders in and showing them exactly how the fittings would look when installed, they aroused an immediate desire for possession, and the only thing that remained was to make the selection.

Other dealers in districts where the building conditions did not warrant carrying such an extensive stock rounded up a lot of trade by arranging store and window displays and using newspaper space.

### Make a Fine Showing

The better the fittings the better the display. Dealers state that they show off as well at night as in the day time and that they find a large percentage of householders, aside from those who are building new homes, interested in the goods. They come and ask about the prices and frequently take home a towel bar, a soap dish or some other piece.

Besides the lines usually stocked, some dealers have found that it pays to push such goods as bath brushes, bathroom mirrors, sprays and even manicure sets.

### Sell Themselves

Keeping these lines well displayed, the dealers say, is half the battle in keeping them moving. Once people know where they can get them they become regular buyers.

The splendid appearance of many of the articles very often causes people to "sell themselves" on them. They realize at once that this or that piece would add that touch to their bathroom that they would like to have, besides giving real service to the users.

Many dealers report a steady development in this business as a result of the enterprise of manufacturers in getting out new designs and in keeping pace with the demands of the public for quality articles.

### Good Talking Points

Aside from their splendid appearance, the majority of the bathroom fixtures give the dealers real talking points to emphasize. It is obvious that they are well made and well finished. Many of them are nickel-plated, and as they are made of brass may be guaranteed not to rust or corrode. They are easily kept in good condition and looking nice. Many a house builder these days is breaking away from the old-time idea of putting the bathroom in some obscure part of the house, under a stairway or hidden away at the back. The new idea is to make the bathroom one of the most useful and attractive rooms in the house. Dealers state that many home builders now state that they want to be as proud of their bathrooms as they are of their drawing rooms, and that with this idea in mind they want fixtures in keeping with the costly equipment they are installing.

### Means Good Business

This idea is apparent in the money that is being spent on equipping bathrooms in hundreds of the better class of houses that are now being built, and it offers some splendid opportunities for business for the dealer who can supply the goods. A great many of the plumbing firms are realizing it and are cashing in on the opportunities offered. A big share of the business is secured because they have learned the value of letting people know they have the stock, and of keeping it well arranged in their display rooms and windows.

Dealers also state that even in the older houses the owners are good buyers of the new fixtures. They say that the new lines carry a strong appeal to buyers because they help to make for better bathrooms no matter where they are installed, and the smallest bathroom can be greatly improved by the installation of handsome new fixtures. People realize this, the dealers say, and buy the equipment.

## PIONEER WHOLESALE PLUMBER PASSES AWAY

In the death of Albert H. Bush, at Los Angeles, the hardware and plumbing trade lost one of its strongest, oldest members, a merchant of Los Angeles for more than 30 years. Mr. Busch was president of the A. H. Busch Company, a wholesale plumbing institution that is a worthy perpetuation of his name.

## CLEANLINESS IN THE PLUMBING SHOP PAYS IN INCREASED BUSINESS

There are two reasons why the plumber should keep both his shop and his store clean. One is because it has a better effect upon the public. The other is that cleanliness means orderliness and orderliness means that work can be done quicker and cheaper and that less material will be lost. Both of these two things increase the profits of the business.

**Prospects Largely Influenced by Appearances**

The householder is not nearly as likely to keep putting off a job that ought to be done if the plumbing shop looks clean and orderly, as he will if it does not. A dirty, disorderly place of business gives rise to visions in the mind of the prospective customers of the mussed up condition his house will be in if that plumber does a job there. Consequently these people keep putting off having work done as long as possible.

If the shop is neat, clean and orderly, the inconveniences of having work done around the house or the plant are not made so vivid and there is greater chance that an immediate decision will be made. In this way the business is increased.

**Draws Better Class of Trade**

People also who have the most money to spend usually care a good deal about appearances. Consequently they are going to spend their money with the man whose place of business presents the best appearance. All that is necessary is to look inside the office of the plumbing shop to gain an impression of the kind of jobs that it gets. If the place looks clean and neat, if everything is orderly, one at once forms the conclusion that this shop is getting the best business in town. This impression that it conveys makes it just so much easier to get that business.

On the other hand if the shop is dirty and disorderly, the impression conveyed is that only the poorer class of business is done by the concern. This makes it just so much harder to secure the best business.

Men who work in clean, orderly surroundings are not so likely to be careless and are not so likely to waste so much material. In addition, if there is a place for everything, everything is kept in its place and the rules of neatness and orderliness are rigidly observed, it is very much easier to keep track of the stock.

This fact is being demonstrated every day. Manufacturing plants are now much more neat and orderly than they were a generation ago. They are that way largely because it has been found that keeping them so actually cuts down the cost of manufacture.

Therefore, keeping the shop and the store neat, clean and orderly has a threefold advantage. It attracts more business, it makes it easier to secure the better class and more profitable business and it lowers the cost of doing business. Each of these three things adds a little to the annual profit.

## DON'T BE AN ECHO

When you were a youngster you liked to go into the woods or among the hills and to "holler" just to hear the echoes mock you. We all did—but even then we did not take the echoes seriously, for we knew that they could do neither harm nor good. They were merely hollow imitations of a real voice. There are lots of people today who are mere echoes. They have no original ideas of their own, but they are ready to rubber stamp whatever they hear someone else say which sounds plausible. These are the folks who are constantly kicking and kicking about hard times, and high prices, and war taxes, and the probable coming slump in the market, and lowered production, and disturbed industrial conditions.

Grant that all this may be true! What good is it going to do to whine about it? Let's set to work and make the most of every day to entrench our own position more strongly. Besides, after we keep echoing all the dismal things we hear, we will only succeed in impressing our associates with our timidity, our lack of resolution, and our probable inability to overcome real difficulties when we meet them in our path. Finally we will grow into mere "fraid-cats" sure enough. Let's echo something strong and fine. It's lots more fun.

**You Will Have to Dig**

If a man is going out to look for some nuggets of gold—he will have to dig. If he expects a better job now or later than he has at the present time, he will have to do some digging to prove that he is a worker of merit, or to locate that job for himself. Even if someone comes and offers him a larger salary, it has been observed by someone that he is a good digger. If you want more business you will not get it by lamenting the methods of your competitors. You will have to dig up some methods of your own and set them to work.

If you covet a position of power—it will not come and grab you by the shoulders, you will have to qualify for the job. The best diggers are the most successful people. And the most successful people are the ones who keep digging when other folks have grown discouraged. You and I may not know that such ones are digging, but believe me, they keep their goal constantly in sight, and spend many an hour digging when others least suspect it. Don't forget that!

The Sanitary Plumbing Company, of Long Beach, California, has purchased the property where their store is located and will soon double its present size.

H. L. Sweeney & Sons, formerly of Seattle, have opened a plumbing shop at 32 West Cota St., Santa Barbara, California, where they will maintain a large stock of equipment and supplies.

## REAL COSTS OF PLUMBING INSTALLATION

Each of the two partners of a plumbing company, which is not by any means large in size, draws a salary of ten thousand dollars a year in addition to his share of the profits at the end of the year. One of these men devotes his attention to the completing of contracts, to seeing to it that the work is done in a satisfactory manner and at as low a cost as possible.

The other man stays in the office. He figures contracts and analyzes costs. It is the firm conviction of each partner that the work the man in the office does is well worth the money it costs. That man knows to a cent just what a given job ought to cost if conditions do not change before it is completed. He knows just what should be figured into each job as overhead. He knows costs so minutely that every contract, every job taken shows a real and not a fancied profit.

This man doesn't guess. He knows. He doesn't take the statements and the figures of someone else in regard to costs. He takes only those that he has found by experience to hold true in his own business.

### Know Your Own Overhead

"If you are going to make money in this business," said this man, "you can't rely upon any system of figuring costs, you can't use rule of thumb methods, you can't use a set of figures that someone else has worked out. You must study and apply your own individual costs. If I showed you all my costs, if I explained in detail the system I have worked out for this business and you gave all the information to other plumbers, it would mislead them rather than help them unless they analyzed their costs as carefully as I have mine.

The costs in no two concerns are exactly the same. The same system will not even work unless that system is adapted to the size and the kind of business. We are making money because we know our costs. There are today in this city men who are losing money. I know they are, because I know something about the prices they are charging and what it actually costs them to do the work. These same men, however, think they are making money. They have not analyzed their costs and there are some things that they are overlooking.

My partner and I are getting more out of the business than any other plumbers in town and we are doing so because we know our costs to a cent. I am able to save the firm a great deal more than my salary every year. If I went out on the job and tried to figure contracts at night, it would not be many years before we would be out of business."

Judging from the prosperity of this concern and the comparative poverty of others where everyone is too busy to analyze costs, the opinion of this man is well worth giving serious consideration. Today, more than ever before, it is necessary to analyze costs to know what each separate item costs and to be sure that all the items of cost entering into a job are included in the price charged for that job. A capable person in the office who is responsible for this work adds a great deal to the prosperity of the business.

Already there are too many concerns doing this to make it at all safe to neglect it. It is becoming harder and harder to offset any losses on one job by increased profits on another. It is likely to work the other way around. The concern that analyzes costs will get all the profitable jobs, while the concern which pays less attention to costs gets the unprofitable jobs.

The only safe way, according to this man who has made a success by doing so, is to keep a detailed classified account of overhead and operating expenses, a perpetual stock record, and frequently check up results by means of inventories and trial balances. Incidentally, as this man says, this makes it lots easier to borrow money at the bank to finance jobs that the firm would not be able to handle without this aid. This firm has found that studying and analyzing costs has been worth more than ten thousand dollars a year to it.

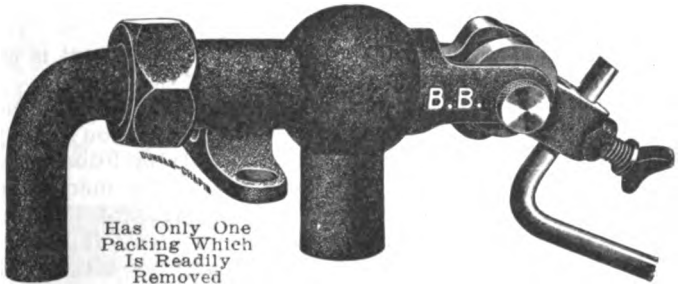
---

## ANOTHER ACCOUNT OF TREACHERY DURING THE WAR

A few months before the armistice was signed, a Hamburg liner, owned and operated by a German agency, was interned at an American port and taken over by the United States Government for war service.

The lack of reluctance on the part of the ship's officers when leaving the ship, at once aroused suspicion and served to intensify the inspection given interned ships. Preliminary investigation failed to justify our officers' belief that the vital parts of the ship had been tampered with; however, after days and weeks of examination, during which time not an inch of the ship was overlooked, it was found that every ninth or tenth rivet on the ship's boiler had been removed and wooden pegs substituted. These wooden pegs were the same shape as the steel rivets and had been painted to match. Only by tapping and noting the unmetallic sound were they discovered. Experts said at the time that the boilers might have held for several hours before bursting. No doubt the Germans planned to allow the ship to get well out to sea before their labor would bear fruit.

However that may be, the point is forcibly brought out that ship rivets, whether in the boiler or hull plates, are the most vital parts of its construction. If of improper chemical analysis or driven while at the wrong temperature, immeasurable trouble and delay, is bound to result.



At the Hog Island ship yards, several years ago, in order to speed construction, premiums were given the workmen on the number of rivets driven; needless to say, it had a marked effect, but upon final inspection hundreds of rivets were condemned and consequently had to be removed, causing great delay and expense, condemned for the most part, however, because they were improperly heated and driven.

One manufacturer of rivets has made a scientific and exhaustive study of their peculiar requirements and in addition The Falls Rivet Company has endeavored to instruct customers in the proper method of heating and driving.

# Actual Money Value of a Smile

(By Harry G. Nye)

You may shy at this, Gentle Reader, and flip the pages and pass it by with the comment:

"Oh, rats! That's one of those darned 'smile' articles again."

If you do, you are the very fellow who ought to read it. In the first place, it isn't going to be one of the usual kind, and even if it were, you could probably use it in your business, anyway.

What I have in mind to say isn't so wise that it hurts my head and I don't have to get rid of it to prevent headache; but I am going to try to take a new slant at this "gospel of the smile," and I would like it and appreciate it if you would go along with me and see what we can figure out together.

I say "figure" advisedly, because what I would like to do is to figure out the actual money value of a smile. Men who run everything from blacksmith shops to national banks have been advised by a thousand convention orators and a thousand conventional writers to "smile." But one thing I have observed about these speeches and articles is that they advise you to smile at the customer—to greet him with a grin and show him to the door with a snicker.

That isn't the kind of a smile I am talking about at all. Smiling at the customer is undoubtedly advisable, and, if she is a good-looker, very easy. There isn't any question about the selling power of a smile and the value of looking good-natured, although inside one may be biting nails.

### Smile for Home Consumption

But the smile I am talking about is the smile for home consumption, the smile for the shop and not for the shopper, for the fellow at the bench and not the dame at the door. I don't think I can quite figure out how much goods a good grin will sell, or whether you can add an extra five per cent if you throw in a laugh with it. But I do know just how much money you can make in your own shop with your own men in your own way.

"Charity begins at home," said the old saw, and it is true of a smile. Your shop is your home, your business home, and there is where you spend most of your days (and some of your nights). I never thought much of a religion that was for only Sunday wear, and I don't think much of a smiling policy for the public but not for the boys at the bench.

But what we were talking about was the money value of a grin as opposed to the handicap of a grouch—for a grin is an asset in any shop and a grouch is a liability.

Well, if you have a machine in the shop, you oil it once in a while, don't you? Why? Because it operates more easily and does better work. Well, then, why not oil the men around you and under you with a pleasant look that will make their work easier? Isn't it likely to make them work better, just as oil will the engine?

I rather think so. I try it once in a while myself, and it seems to work. I never knew a good smiler yet (unless he was just a fool grinner, who would grin at a funeral as quickly as he would at a show) who didn't have friends. And there is nothing that pays the dividends that friends do.

### Being Human

I'll like to have the men in my shop think of me not just as an employer but as a regular human being. Do you know, I wouldn't want to have a reputation for being a wise guy, even if I could? Of course, there's no chance, but anyway, I'd rather have the fellows around me think I was just about as likely to make a mistake as they are, just as likely to pull a boner, or say the wrong word, or do the wrong thing. I'd like to feel I was one with them and of them, not over them.

I wouldn't care if they thought I tried hard not to make breaks, just as long as they knew that I occasionally did. Then they'd know I wasn't a loafer, by the way I tried, and yet they would know I was human because now and then I failed.

I needn't tell you that that smile has to be from inside out, and not from the outside only. There is one thing that seldom gets by, and that is a counterfeit smile. If we could detect phony money as easily as any of us can spot phony good-fellowship, there would be a lot of needy counterfeiters in this world.

Because the smile I am talking about, after all, is not the smile for effect. I have no use for the professional smiler, who smiles for revenue only. The kind of smile to cultivate, and the only kind that will work, is the smile that you mean. If you want to make other men feel good, you must first feel good yourself. If you want to make other men like you, you must quit hating yourself.

But I haven't said much about the money value, after all. But it is easy to figure. I'll bet if you are a grouch and will set down your production per day per man; and then you will quit the grouch and get a grin on, come in for a while with a "Good morning" (but not too suddenly, because they are not used to it, and will suspect you) and will figure up your pro-

duction per man per day again, you will find that a smile pays all the way from $1.89 to $87.54 a day, according to the size of the shop—and the smile.

And what it will pay you—in feeling a little happier and a little more human yourself—well, I can't figure that.

## EFFICIENT PLUMBING MOST IMPORTANT PART OF A HOUSE

There is nothing in a building that adds more to the comfort and convenience of the occupant than does a simple, efficient and economical system of plumbing. Did you ever attempt to realize what would happen to your city, if all your buildings were deprived of a plumbing system?

The thought of deprivation is terrible when you think about the insanitary condition that would follow and the nuisances that would result, also the increased number of breeding places for flies, mosquitoes, rats and other carriers of communicable, contagious and infectious diseases.

The modern home, factory, school, theatre, office building, hospital, hotel and public institution of today, would not and cannot be successfully operated without a system of plumbing and drainage. The removal of infectious material from buildings is of value to public health. The mental and physical health of the occupants of a home is dependent in a great measure upon the sanitary conveniences.

They are essential to the cleanliness of both the person and the apparel. The cleanliness of the body is simplified by the bath tub and shower bath. The cleanliness of the apparel is simplified by the laundry trays. The cleanliness of the hands, by which many diseases are transmitted to the mouth, is simplified by the lavatory. The sanitary condition of the kitchen and the cleanliness of the cooking utensils and food is in a great measure dependent upon the kitchen sink.

The sanitary drinking fountain has eliminated the danger inherent in the use of the common drinking cup, and the sanitary water closet is the safest method of removing human excrement and urine, which are the greatest hazards to man. This modern convenience has eliminated thousands of foul, germ-producing privy vaults, the chief breeding place of that disease-carrying pest and menace, the common house fly. The elimination of the privy vault has also removed one of the homes of the rat, another pest which is a very expensive boarder and a disease carrier.

F. J. Kantz is a new plumbing merchant at 554 E. Fifth Ave., Pomona, California. He has had experience in Indiana, as well as in California, and is well equipped to render the best of service.

## SHOW THIS TO YOUR TRADE

The Clayton & Lambert Mfg. Co., Detroit, Michigan, are manufacturers of the No. 71 Gasoline Fire Pot herewith illustrated. It is noiseless in its operation and burns perfectly, producing an intense heat without smoke or odor, and it is claimed that it is the hottest fire pot made. (See opposite page.)

The salient features of special interest to the mechanic are as follows: The extremely high generating power of the burner and low cost of operation, as fuel is saved to a remarkable degree, and the lightness of the construction of the fire pot, which makes it easy to carry around. The burner has a great generating power and is made with two heating surfaces, which burn from each side to the center and is protected by a hood with cover so that the flames are not affected by severe wind or cold weather.

This fire pot is equally satisfactory for outside work as well as for indoor uses. A pot of lead can be melted and a pair of 12-lb. soldering coppers can be quickly heated at the same time. The sub-flame for the generator allows the heating flame to be turned low, thus saving fuel expense, and the maximum heat can be secured instantly when needed. The tank is made of heavy gauge seamless drawn steel, reinforced, tinned inside and out, which makes it rust proof. It is fitted with patented Cushion Protection Band, which prevents injury to the base of the tank.

A large funnel makes the tank easy to fill and avoids the waste of fuel. The filler plug that screws into the funnel is made with a cap, which fits over the funnel, making it dust proof and keeps the dirt from getting into the gasoline and working up into the burner. Ample air pressure for operating the fire pot is produced by a patented Automatic Brass Pump, fitted with double spring automatic check valve. Any further information desired can be obtained from the makers at the above address, who will mail their catalog showing their complete line of gasoline and kerosene fire pots and torches for the mechanic's use, to anyone who is interested.

The Fresno Plumbing Supply Company is erecting a $15,000 home for itself at Mono and R. Street, Fresno, California. It is a one story brick building, with particular facilities for display windows.

Wealth is not the real prize of life, it is only a trophy, a symbol, and may carry with it no satisfaction; indeed it does not carry with it genuine, lasting satisfaction unless it has been won fairly, honestly, honorably.

A cup or medal or other trophy is not the real prize the victor receives; the real prize, the real reward, is the satisfaction derived from superior, worthy achievement.

Statement of ownership, management, circulation, etc., required by the Act of Congress of August 24, 1912, of Hardware World, published monthly at Portland, Ore., for October, 1920. Before me, a Notary Public, personally appeared T. M. Shearman, who, having been duly sworn according to law, deposes and says that he is the publisher of the Hardware World and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption. Publisher, T. M. Shearman, 310 Taylor Street, Portland, Oregon; editor, business manager and owner, T. M. Shearman. Known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: None. The two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities than as so stated by him. T. M. Shearman, Publisher. Sworn to and subscribed before me this 28th day of October, 1920. D. B. Richards, Notary Public. at Portland, Oregon, for April 1, 1921. Before me, a Notary Public, personally before me this 29th day of March, 1921. D. B. Richards, Notary Public.

## STOVE POLISH

The ladies who read have no doubt used lots of stove polish, in their desire to have the kitchen range presentable, but we wonder if they know which was the first polish that was actively placed on the market. Well, it happened in 1827, nearly a century ago, and the polish was Dixon's Carburet of Iron. Although it actually contains no iron, it was first called "Carburet of Iron" because of the early supposition that graphite, of which it is composed, was a compound of iron and carbon.

For many years it was the best known polish in the world; then newer products demanded all the time of the company's sales force and stove polish gradually became neglected.

There are more than a hundred brands of polish now, but none of them give the same complete satisfaction as the "old reliable." Most women prefer a preparation that lasts a week or more on a hot stove, rather than the liquids and pastes that burn off quickly.

Dixon's "Carburet of Iron" is free from poisonous odors and explosive vapors. It does not burn red, but produces a beautiful lustre that lasts. When a real, honest-to-goodness polish is used there is no need to go over a stove every day or so to keep it looking attractive.

---

You never see a really up-to-date store operated by a man who reads no trade papers.

---

If your personal taste gets to the private office stage before your bank accounts gets there—kerflooie!

**TURNER New Gasoline - Kerosene Torches**

The Burners are all constructed alike, containing all the patent features, however different in size according to price. The baffle in the burner will generate the low grade gasoline or kerosene without adjustment. The adjusting needle eliminates enlarging of orifices that make all burners useless. The flared tube will siphon the correct amount of air regardless of adjustment or size of flame. The patent pump involves the parachute principle. Leather is free and will not wear. Drip cup made of sheet steel stamped, copper plated. Burner generates easily and produces more heat on less fuel than our old line. Our Triple Jet takes the place of our well known Double Jet, involving all the new patent features. A trial order will convince you. If not satisfactory, money refunded. All parts interchangeable. Jobbers will carry repairs—not necessary to be without torch—fix it yourself. With ordinary use a torch will last a life time.

THE TURNER BRASS WORKS - Sycamore, Illinois, U. S. A.

## "IN A DIRTY BUSINESS BUT DO CLEAN WORK"

The following out-of-the-ordinary copy is clipped from the Pierce City (Mo.) paper:

Announcement: I am now located in the new A. C. Looney building. At your service with full equipment and a desire to get and retain your patronage. We are agents for the famous Delco Lighting System. Add Williams, the people's plumber, phone 48. I am in a dirty business but I do clean work.

---

It is a fine thing to be a good "spender," but if you keep your ears close to the ground you will hear the echo of the Guinea cry, "Spend me little, spend me long."

No. 71 Fire Pot. List Price, Each, $27.20
Ask for Discount

# The Hottest Fire Made

The No. 71 C. & L. Fire Pot is the Hottest Fire made and it is Smokeless, Odorless and Noiseless. Every mechanic knows what that means. The tank is made of seamless drawn steel, with all fittings welded in, and is practically indestructible. It has a sub-flame so that the burner can be turned down low when not in use, thus saving fuel and time. The No. 71 will heat 12-lb. coppers as fast as two mechanics can use them. Jobbers supply at factory price. Send for catalog.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

A.G.M.CO. VIKO ALUMINUM

## A Merchandising Advantage

Women were quick to discern the merits of aluminum cooking utensils. They found them easier to handle, less likely to burn and scorch, and more durable than many wares available a decade ago. That is why you find aluminum ware in the majority of American kitchens today.

And you find it in all good stores. Is your store wisely stocked in its aluminum goods section? One good line with a popular appeal is better than odds and ends of many lines. From VIKO, The Popular Aluminum, you can fill every stock need. Viko is the largest line in the world. The excellence of Viko quality combined with the popular Viko price makes for many profitable sales. For dealer proposition—

# Business Opportunities

**WANT TO HEAR FROM OWNER**

Having Hardware or other business for sale. Give cash price and information. John J. Black, 229th St., Chippewa Falls, Wisconsin.

**FOR SALE**

125 pair No. 1 B. 27½ Expansion Ball Bearing Trolley Door Hangers, manufactured by Richards-Wilcox. Address C. W. H., care HARDWARE WORLD.

**WANTED**

Experienced general hardware road Salesman. Age about 30. State experience and record. Drawing account and bonus. Eastern Washington. Splendid opportunity for right man. Address XYZ, care HARDWARE WORLD.

**FOR SALE**

A new clean stock of Hardware and Household Utensils, all less than two years old. A good assortment of salable goods and up-to date fixtures bought at the right prices. Stock and fixtures will amount to about $20,000.00.

In very best business location in the city. In the most prosperous city of southern Arizona, with a population of over 20,000. A good opportunity for anyone to get into a hardware business.

Reason for selling is that owner wants to reduce his business responsibilities as he has other interests to look after. Add. "Arizona," Care HARDWARE WORLD.

**WANTED**

Position as Road Salesman for Wholesale Hardware Firm, Plumbing Supply House or Electrical Supply House. Extensive experience and references. Address Box 61, care HARDWARE WORLD.

**FOR SALE**

Hardware, Furniture and Implement business in one of the best irrigated sections of the Sacramento valley. Stock will invoice between $35,000 and $40,000. A good business with a big future. Sales for the first six months of 1920, $50,000. Buildings for sale or lease. Address C. & H., care HARDWARE WORLD.

**FOR SALE**

Thriving Hardware and Furniture business in Rocky Ford, Colorado, one of the best towns of its size in the country, located in a prosperous irrigated section. Business in flourishing condition and increasing each year. Stock clean and bought at right prices. Business is clearing big money over and above salaries of proprietors. Low rent. Stock and fixtures will inventory about $17,000. No bonus asked. Proprietor wishes to retire. Anyone interested write for further particulars. Address Butterfields, Rocky Ford. Colorado.

**WANTED**

Someone who likes to do general shopwork, such as repairing tinware, making dryer pipe, plumbing, setting up machinery and helping in the store. Want someone who takes an interest in these things and is glad to do it. We live in a town of 250 people, with good school, churches, good surrounding farming country and good climate. Everything is congenial, but we would like to have someone who is a hustler and will be glad to look after the interests of the trade. Write, advising what salary is expected. Address S. & C., care HARDWARE WORLD.

**WANTED — HARDWARE SPECIALTIES**

We can give due consideration to selling Hardware Specialties to the trade on a commission basis. Address Starks Mfg Co., 325 13th St., Oakland, Calif.

**TRADE RHYMES $1.00**

Any advertiser can have a three verse trade rhyme or five two-line slogans sent them on approval by investing $1.00 Send any suggestions or circulars to (Reegtherhymer) H. Summer Geer, Studio No. 62, 209 Dyckman St., New York City Suggestions selected and used $1.00 each

**FOR SALE**

The best paying Hardware and Implement business in Fresno County, California. We make this statement with the full knowledge that such an assertion sounds broad, but evidence will be available to really interested parties. Address Hardware, care HARDWARE WORLD.

**POSITION WANTED**

As assistant manager or director of a housefurnishing department in a retail or department store is the position I would like. Nine years' experience should be sufficient to guarantee my ability to fill the position. Twenty years as a road man visiting this same trade, has kept me in touch with the line specified. Salary no particular object, but a living remuneration expected for my services. Address G. S. H., care HARDWARE WORLD.

**FOR SALE**

Hardware Store, clean up-to-date stock hardware and household utensils. One of the best locations in San Francisco. Excellent lease, cheap rent. Ten to twenty thousand will handle. Address T. K., care HARDWARE WORLD.

**FOR SALE**

Hardware, Electrical and Sporting Goods store. Established 38 years in one of the busiest growing sections of San Francisco. Owner wishes to retire. Bargain for cash buyer. Address Box 2744, care HARDWARE WORLD.

**HARDWARE MAN WANTED**

Thoroughly experienced in all lines of General Hardware; single. $125 with board and room. Department Store, San Joaquin Valley. Address L. B. C., care HARDWARE WORLD.

**WANTED**

Position as Manager of Hardware Store. Have had extensive experience in management of hardware, plumbing and electrical supplies. Will accept suitable, or salary and working interest. References Address Box 16, care HARDWARE WORLD.

**POSITION WANTED**

By A-1 Hardware and General House Furnishing Salesman. Twenty years' experience. Five years in present location as Manager and Buyer. Can furnish the best of references. Address C. A. D., care HARDWARE WORLD.

**FOR SALE**

Hardware Stock in good town 100 miles from Spokane. Invoice $6,000. Write for particulars. Address H. B. R., HARDWARE WORLD.

**TRAVELING SALESMAN WANTED**

One wanted to sell Coal, Gas Ranges, and Oil Stoves in Michigan. Also Salesman to sell Southeastern States. Address Box 220, care HARDWARE WORLD, Boatmans Bank Building, St. Louis, Missouri

**STOVE SALESMAN**

For States of Arkansas, Oklahoma, Louisiana and Texas to sell high grade Porcelain Enameled Coal Ranges. New Company. We want only men who can produce. Address R, care HARDWARE WORLD.

**WANTED**

Party with $15,000 or $20,000 cash to invest in established jobbing business in California, to take active part. Must give good references. Box 409, HARDWARE WORLD.

**FOR SALE OR LEASE**

Rolling Mill complete. 8, 10, 16 and 18 inch Mill for rolling steel and iron. Best reason for selling. With or without real estate. A chance of a lifetime. Address Box 43, care HARDWARE WORLD.

**SYSTEMATIZE YOUR STOCK BINS**

Bin label cards for Ford Auto parts, sheet metal card holders, transparent celluloid card covers, bin markers and stock record cards for mill, hardware, auto and plumbing supplies. Send for samples and prices, and free booklet, "How to Systemize the Stock Room." Haddon Bin Label Company, Haddon Heights, N. J.

**WANTED**

Accountant not over thirty-five years old, experienced in hardware store work on single and double entry system, familiar with names and prices on hardware merchandise. Must be willing to travel extensively. State details of education, experience and salary expected. Address reply to Box 437, care HARDWARE WORLD.

**FOR SALE**

A complete line of hardware, building material, plumbing goods, lumber, etc. The same will invoice about $25,000. Located in a thriving and growing community of about 10,000 people and doing a business of about $80,000 per year. Located fifty miles from railroad—therefore able to make good profits. Reason for selling is, owner wishes to retire from business. Terms: one half down, balance on time to suit purchaser. Address L. A. H. Co., care HARDWARE WORLD.

**FOR SALE CHEAP**

50,000 prs. 2x2 and 2½x2½ tight pin sheradized steel butts: 60,000 4½-in. Hinge Hasps. Union Steel Spec. Co., 5605 Wayne, Chicago.

**COMMISSION MEN! LIVE WIRES!**

Prepare now for big earnings during 1921.

We want live, honest, conscientious commission men in every state—

WORKERS

Big commissions and full credit on all repeats. Exclusive territory on big selling, well advertised specialties. $20 to $75 per day can, and is being earned. Workers only. References necessary. Capital not necessary. Reliability insisted on. Address C. C. G., care HARDWARE WORLD.

**FOR SALE**

Good clean stock of Hardware, Implements and Plumbing goods. Invoice about $6500.00. Excellent farming and fruit country to draw from. Center of prune district. This is a good going business; stock was turned over four times last year. Address Riddle Hardware Company, Riddle, Oregon.

"Chet" Martin, who has been associated with the Geo. C. Baer Co., Pendleton, Oregon, and recently with the Flemming Co., Yakima, Wash., is now with C. D. Lenfesty Hardware Co., Walla Walla, Wash., and is glad to get back to his native region.

Sturgis & Storie, Walla Walla, Washington, are the distributors for Walla Walla, Columbia, Asotin, Garfield Counties, Washington; Umatilla, Union, Wallowa, Baker Counties, Oregon, on the Lally Light, and report that they are doing a very excellent business.

DRAW a glassful of water from your radiator and **see** the **Rust** that is eating away the walls of the cooling system.

A deposit of lime and magnesia—called **Scale**—forms a hard crust on the parts that escape Rusting. Most engines work at about 50% of their efficiency, because of Rust and Scale.

# The troubles they can't *see* never worry some car owners!

"OUT of sight, out of mind" seems to be the theory on which some men drive their cars.

How else explain the fact that they totally ignore the dangers of a Rust-choked, Scale-clogged cooling system?

Is it possible that they don't **know** that Rust is **constantly** knawing at the metal? And that Scale is depositing a thick hard coating on the walls that **prevents** radiation of engine heat? This breaks down the oil film, causes steaming, overheating, scored cylinders, etc.

Hundreds of thousands of car-owners use "X" Liquid, first to **dissolve** the Rust and Scale — then to **prevent** new Rust or Scale from forming.

You'll be surprised what **better performance** you can get from an engine that isn't **handicapped** with Rust and Scale.

* * *

The same "X" Liquid that loosens Rust and Scale **repairs leaks** anywhere in the cooling system—radiator, pump, connections, etc. It makes one repair or one thousand at the **same** time and at the **same** cost. It automatically makes **permanent** repairs that stand 2000 pounds pressure.

And "X" Liquid **prevents** future leaks. It works perfectly in alcohol or other reliable anti-freeze.

For a troubleproof cooling system over 25,000 careful dealers recommend "X" Liquid. It **is not** a radiator cement, meal or "dope," but a **scientific** process that keeps cooling systems 100% perfect.

**Large Size $1.50**

*will do a $25 repair job!*

**Ford Size 75c**

*Get "X" Liquid from your dealer today*

# Meet the Growing Demand *for* All-Steel Refrigerators with the Gurney Athermos

HERE'S an All-Steel line that ***shows*** right and ***is*** right—a line whose attractive appearance creates an instantly favorable impression and whose construction is the last word in scientific refrigerator building.

Athermos refrigerators are made from deep drawing steel sheets riveted and seamed together so as to make them absolutely water tight.

They are heavily insulated with Flaxlinum sheets overlaid with two layers of heavy waterproof paper with $\frac{3}{4}$ inch of dead air space provided to assure complete non-conduction of heat. They are not affected by dampness and will last a lifetime. Two styles of enamel finish—pure white and battleship gray—are offered. Heavy bronze nickle-plated trimming are used throughout.

Linings are all enameled, except for the removable Ice Chamber, which is of galvanized iron. The construction of the Athermos provides unobstructed circulation of cold dry air and our 100% efficient Sanitary Trap is used in it.

**Beside the unequalled All-Steel Athermos, we manufacture a complete line of Wood Case Refrigerators in so many different styles and sizes that no Gurney dealer need ever lose a sale through inability to offer just what the customer wants.**

## Localized Selling Helps That Do Get Real Action

***We back Gurney quality and Gurney reputation by giving Gurney dealers advertising aid that amounts to something—not mere "general publicity," but practical sales helps adapted to his community and his store. These helps will increase your refrigerator business. Write for details.***

Shall we mail you one of our new catalogs?

# ROPE FACTS YOU SHOULD KNOW

During the year 1918 the Federal Trade Commission took action regarding the purity of Manila Rope; this body caused manufacturers to agree not to use the word "Manila" in connection with any rope composed of less than 100% abaca or Manila fibre, unless the percentage of adulteration be clearly indicated on tags, burlap covers, invoices, printed matter, etc.

This excellent step in the right direction has proven to be a splendid safeguard for dealers and consumers.

Another protection has been afforded by the discovery of a simple and practically infallible chemical test for non-Manila fibre. This provides a ready means for examining any piece of rope and quickly detecting the presence of other fibres.

But until the BUREAU OF STANDARDS SPECIFICATIONS were issued, little or no official notice had been taken concerning the vital importance of **quality of fibre** in MANILA ROPE. The framers of these specifications, including rope manufacturers present at the various conferences, realized that the term "long fibre" was of no value because all Manila hemp is long, regardless of grade. They realized also that the mere designation "Pure Manila," "100% Manila," or similar expressions, even coupled with certain strength requirements for new rope, did not guarantee the purchaser a rope of high quality. Therefore, they incorporated in their specifications certain definite designations of fibre quality so as to insure the delivery of rope of proper grade where first class cordage might be required.

Rope purchasers who may not be familiar with these facts will find it profitable to investigate and thoroughly inform themselves regarding the wide variation in quality and, therefore, in strength and durability between the numerous grades of "Pure Manila" rope on the market. We shall be glad to aid in this investigation upon request.

Before the Federal Trade Commission took action and before the Bureau of Standards Specifications were drawn up, as well as since that time, WHITLOCK ALL-MANILA ROPE has been made not merely 100% pure, but actually superior to these specifications in every respect—including strength, yardage, tare and quality of Manila hemp used.

WHITLOCK ALL - MANILA ROPE
is, therefore, recognized generally as—

**"The Utmost in Rope Value"**

The Rope that Endures
WHITLOCK
ALL-MANILA

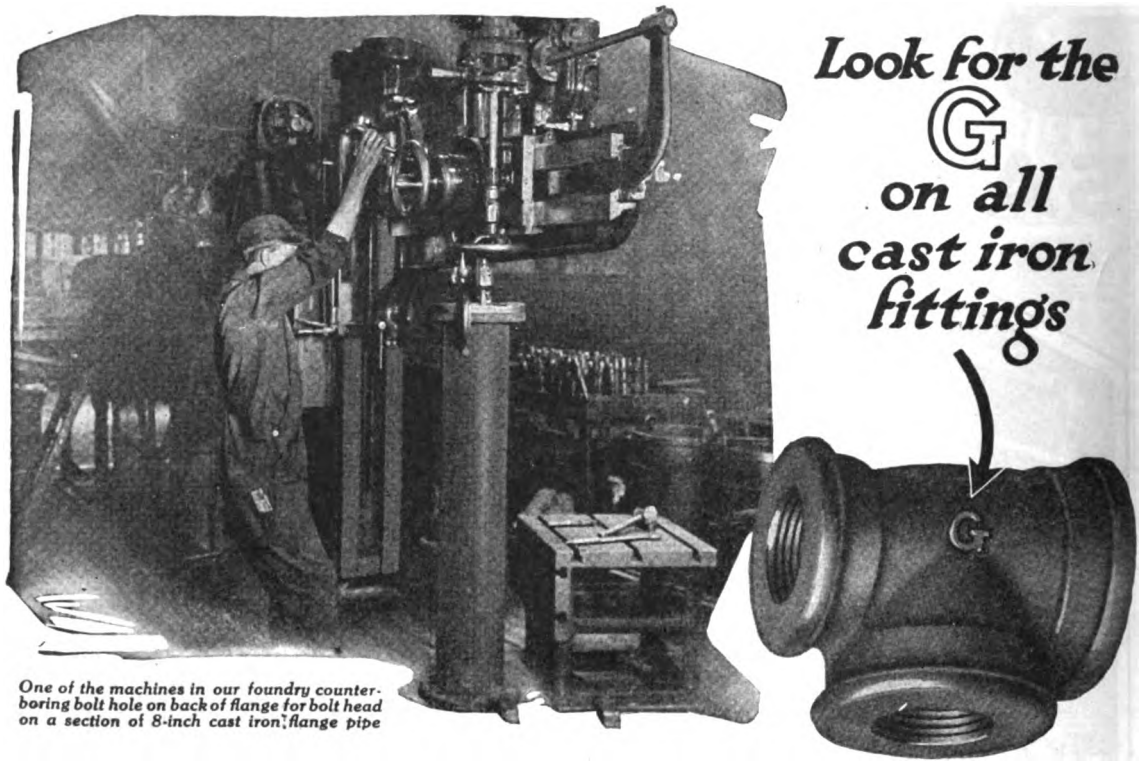
# DISSTON
## SAWS AND TOOLS

# Every Home Needs Some of These Tools

The day of useless gifts at Christmas time has passed. Most people choose articles of practical value for their presents.

And what is more valuable than a good saw or tool? With good tools any man can do practically all the repair work around his house.

Most home workers find a lot of fun in doing their own work, too—in sawing a tough, knotty board with a saw so keen and well balanced that it bites its way through with little effort.



Even driving home a screw gives pleasure, providing the screw driver has a handle that will not turn on itself or slip—one that fits the palm.

Disston advertising throughout the country is telling the home owner the advantages of owning the best tools. Such papers as The Saturday Evening Post, Popular Mechanics and the Farm Journal are reaching hundreds of thousands of homes. Link your arguments with these. The home owner wants the best for his home.

And this is a mighty good time to help him choose wisely—choose things that are useful and things that are the best in the line.

# Grinnell Perfect Fittings

## Mean Better Jobs

Grinnell Fittings are rigidly inspected. We throw out all but the perfect ones. They are the fittings we use in Automatic Sprinkler installations and we can't take any chances. That's why we're so particular. Our standard is your safeguard.

They are the kind you can sell or use with confidence.

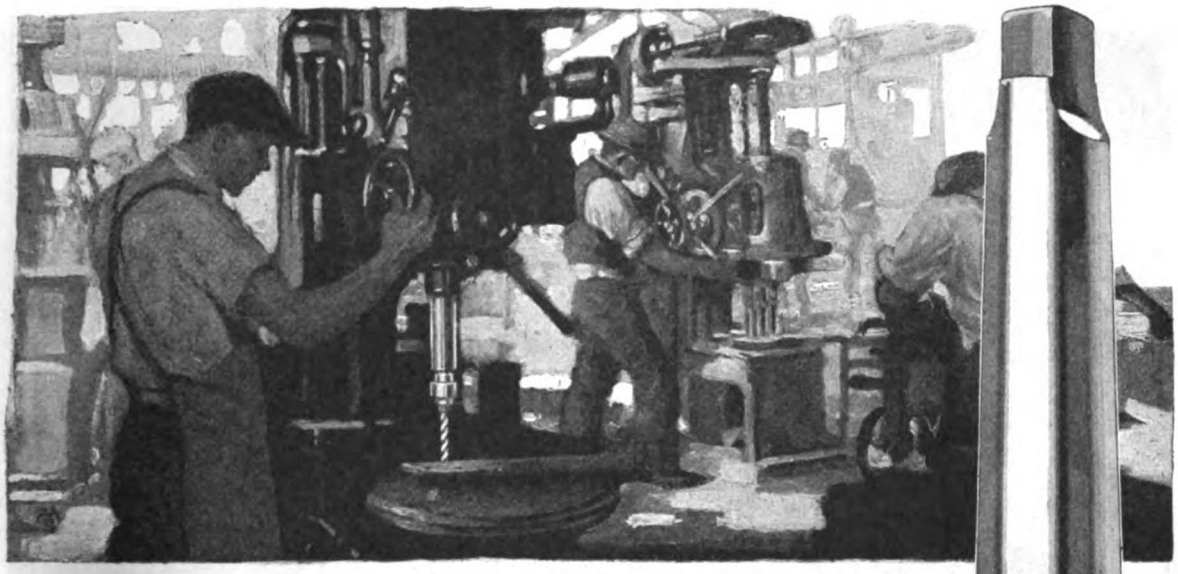
### L. R. D. Valves
### The All 'Round Valve

L. R. D. Valves are the most reliable all 'round valves on the market. By use of the removable discs you can quickly suit them for any service.

This means a big saving in stock, as you need carry only one kind instead of several for different jobs.

L. R. D. Valves are always tight, but never tick.

**Bring Us Your Orders for National Tube Pipe—**



We always carry a large stock of all regular sizes and we cut the thread to sketch.

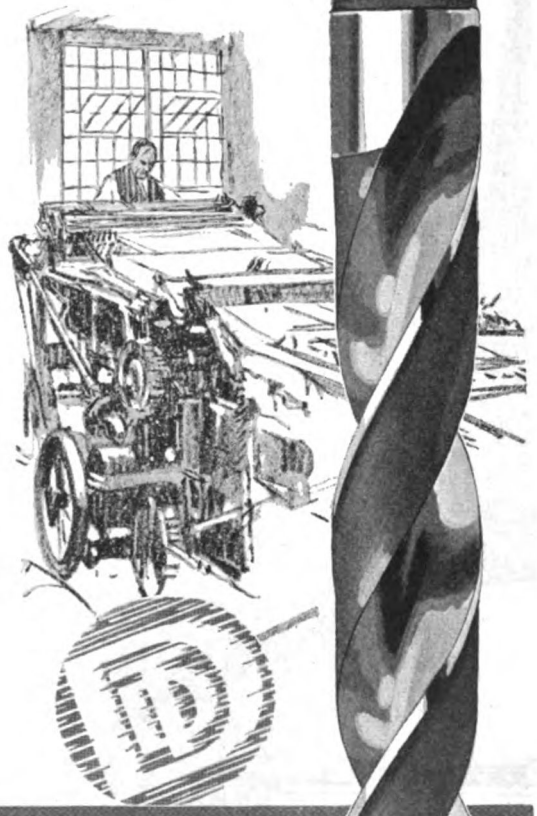
# Precision Printing

*How Would You Get It Without Accurate Drill Holes?*

Modern demands for accuracy and speed in the printing industry have placed strenuous tasks on the presses.

Hundreds of delicate and sensitive parts must function every second in perfect harmony to obtain this precision and speed.



The exacting need for micrometer accuracy in building and assembling printing presses requires drills that are accurate to the finest measurements.

Detroit Twist drills are used by the leading builders of printing presses because of their proved ability to give more accurate holes with less regrinding and with less cost for power.

*Specify Detroit Twist Drills in Your Next Drill Order*

## The Right Tool At the Right Time

FOR the work of mechanic or carpenter, for the everyday job about your house, garage or barn, it's a big satisfaction to have exactly the right tool—and have it handy. Whether you want to drive screws, drill holes in wood or metal, mitre, counter-sink or ream, the tool best suited for your purpose is the one most perfectly designed for this or that particular kind of work.

For over half a century the Millers Falls Company has been inventing, designing and making fine tools. Their expert designers constantly work on new ideas and perfect old models.

Skilled mechanics, master carpenters and hardware dealers will tell you that there are no better braces, auger bits, hand and breast drills, mitre boxes, vises, hack saws and other boring and cutting tools than those branded "Millers Falls." The reason is that every Millers Falls tool is made of the highest quality of materials, is correctly balanced, is stripped of whatever would make it clumsy, and is as simple and efficient in design as honest workmanship can make it.

MECHANICS' VISE No. 522 Scientifically designed, with greatest strength at points of greatest strain. Detachable steel jaw faces, replaceable if necessary, and steel-faced anvil. The screw is attached with a nut for taking up any wear, thus obviating any lost motion. An exceptionally high grade and practical vise.

MILLERS FALLS TOOLS

*This advertisement appears in the December 11th issue of the Saturday Evening Post*

Digitized by Google

# Are these Saturday Evening Post readers seeing Millers Falls Tools in your store?

When your friend introduces you and the new acquaintance says, "I've heard about you before," you feel friendly right away.

The same principle holds true of things as well as people. You've experienced it yourself. You have seen something advertised in a magazine or trade paper, then seen it in a store. If you needed it and had the money, a little urging from the salesman, to help you make up your mind, closed the sale.

Now apply this to your store and Millers Falls Tools. Here's a mechanic or an amateur who has been seeing and reading about Millers Falls Tools for a year or more in the Saturday Evening Post. He may come into your store for only a pound of nails. But if he sees Millers Falls Tools in the window or showcase and on your counter—and you do a little urging—he's apt to leave your cash register richer by a few additional dollars. He's been thinking of getting a Millers Falls Brace, Vise or other tool, and the sight of them, plus the few words from you at what the professors call the psychological moment, does the trick.

Merchants of today know this urge to the customer's pent-up desire is one of the fine arts of selling. It increases profits and speeds up turnover. Try it in your store and watch how it works.

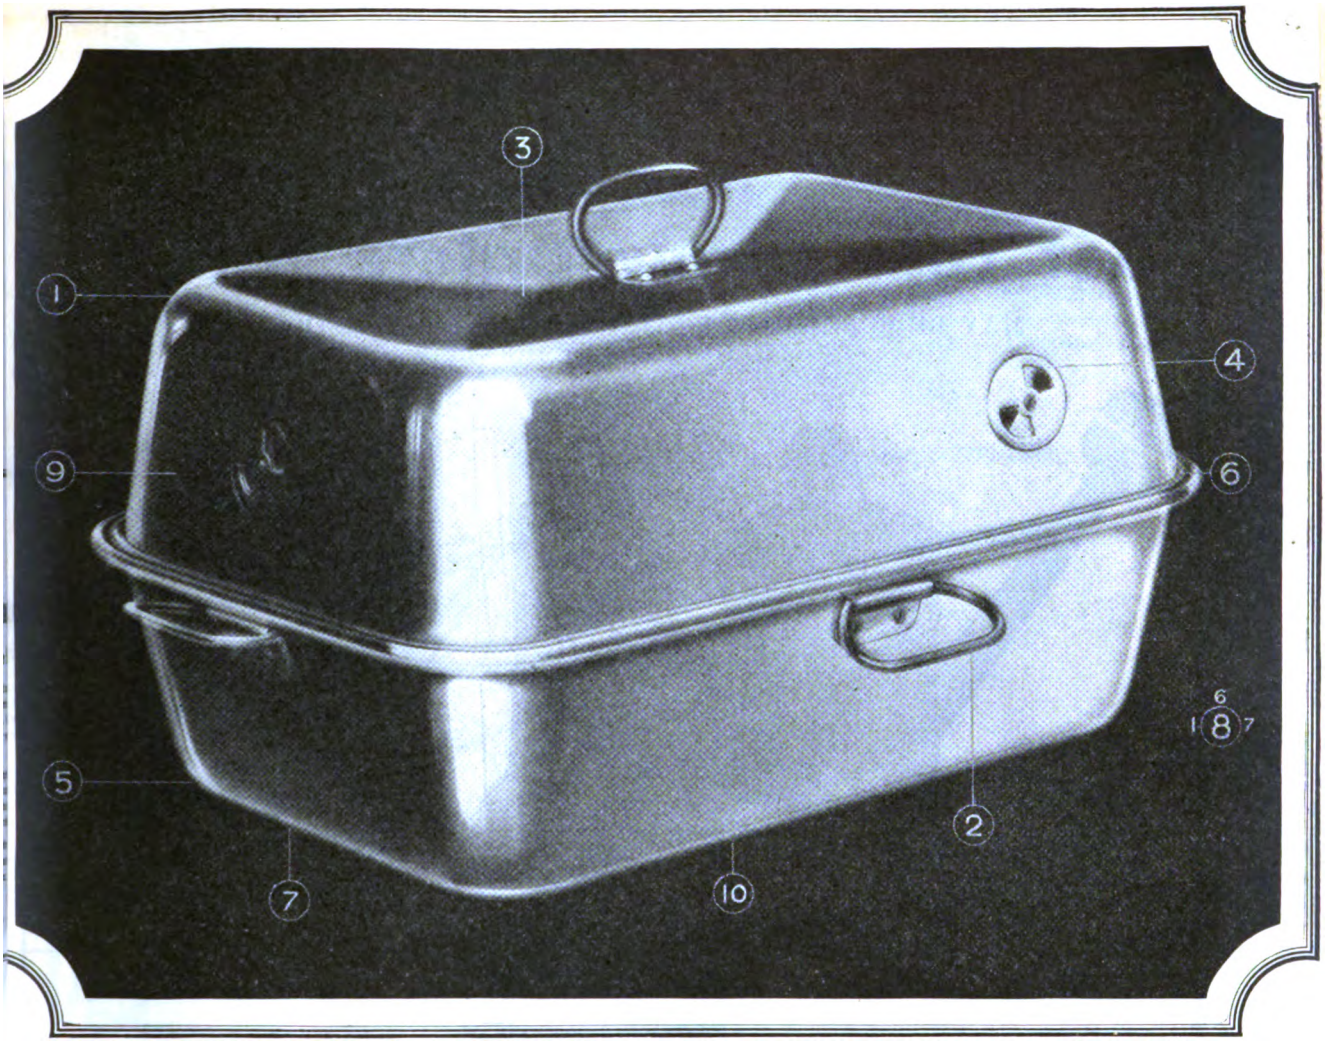
# If You Sell McKinney Hinges

If you sell McKinney Hinges, the display card, shown above, should be on your counter or in your window; and the six general hardware advertisements should appear at regular intervals in your local newspapers.

This two-color display card (12x15 inches) marks your store as the place to buy McKinney Hinges and all other standard hardware products.



The six hardware advertisements are just as general in their character. They herald your establishment as Hardware Headquarters. Ample space is provided in each for display of your name and address.

Electros of these advertisements—all ready for insertion—and as many display cards as you can profitably use will be forwarded to any McKinney dealer upon request. Thousands of people in your community are reading the McKinney magazine advertisements. Let them know you sell McKinney Hinges and Butts.

# 't Has 10 Features of Convenience

Unique among cooking utensils is this Mirro Aluminum Roaster. Handsome, durable, efficient—it is also versatile in its uses.

Within its capacious silvery walls may be cooked the savory Sunday turkey, or week-day roast; and it will care for many a season's cold-pack canning.

No special device is necessary for this method of putting up vegetables or fruit when you have a Mirro Roaster.

Like all Mirro utensils, it is constructed of heavy sheet aluminum which has been rolled repeatedly under tremendous pressure to insure even thickness and freedom from defect. It will last a lifetime, and is therefore an economical purchase.

The improvements in design for which Mirro utensils are famous are the result of nearly thirty years' experience in the making of better aluminum ware.

Note, for instance, these features of convenience:

(1) Ample depth for any roast. (2) Extra side handle which permits Roaster's being put in oven lengthwise or sidewise. Facilitates the moving of Roaster without burning hands. (3) Depressed cover condenses steam at center and drippings thus fall directly on roast. A self-basting feature.

(4) Air vents in side and front. Easy to get at when roast is ready to brown. (5) Rounded edges make for easy cleaning. (6) Cover fits snugly into lower pan, thus retaining steam and meat juices.

(7) Perforated tray which sits in bottom of Roaster. Has cut-out corner for gravy basting with spoon.

(8) Features 1, 6 and 7 combine to make Roaster a perfect utensil for cold-pack canning. It easily holds six one-quart jars. (9) The famous Mirro finish. (10) Famous Mirro trade-mark stamped into the bottom of every Mirro utensil, and your guarantee of excellence throughout.

Fully to appreciate the significance of this trade-mark, remember that back of it is the world's foremost manufacturer of aluminum ware. You will find Mirro at the leading stores everywhere.

Send for miniature Mirro catalog.

# YOUR BEST "BUY" is a customer's good-will

**Unless he hands *that* over the counter when he pays his bill, it's better not to make the sale.**

You buy good-will and gain a friend whenever you sell a Starrett Tool. That accounts for the constantly-growing business of Starrett dealers. Forty years of use have taught mechanics to rely absolutely on Starrett Tools, and they have the same confidence in the dealers who sell them.

Make the most of the new business created by Starrett national advertising, by supplying the steadily increasing demand for Starrett Tools and Starrett Hack Saws.

# 60,000 Double Swings Without a Sign of Wear

WHEN the new Lawson No. 800 Floor Hinge first came out hardware men asked, "Will such light construction stand up under heavy wear?"

So a Lawson Hinge, taken from a dealer's stock, was put to a thorough test. Fitted to a 50-lb. door, it was slammed back and forth continuously—60,000 complete double swings.

After this treatment, as severe as the average hinge would get in a life-time, *no part of the hinge showed any appreciable sign of wear.* It continued to swing smoothly with no lost motion at dead center. This is the result of Lawson *scientific construction.* Strength where strength is needed. Friction eliminated where the wear comes.

The Lawson No. 800 Floor Hinge is made with square bevel-edge reversible side plates, all standard finishes. A better looking job, easily installed and at low cost.

It is meeting with a steadily increasing demand from contractors and architects. This means large sales and quick turn-over for dealers.

*Write today for illustrated catalog describing in detail this and other styles of Lawson Spring Hinges, for residence, office and factory doors, gates, etc.*

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

Whittier Heights Mausoleum.
Architect John J. Frauenfelder,
Suite 1116 Story Bldg., Los Angeles.
Toncan Metal used for all sheet metal work.

# To Last for All Time Toncan Metal Used

The following letter shows the opinion of Toncan Metal held by another prominent architect.

Stark Rolling Mill Co.,
Canton, Ohio.

Gentlemen:

We find it a great pleasure at any time the opportunity affords us a chance to endorse TONCAN METAL.

We have used TONCAN METAL in the Whittier Heights Memorial Park Mausoleum because it was erected to last for all time and it is pronounced one of the best constructed buildings of its kind in the country.

Yours very truly,
(Signed) JOHN J. FRAUENFELDER.

Architects today plan for permanence in all their buildings—Building owners too are asking for materials that last.

Toncan Metal offers durability unsurpassed by any sheet metal made from iron ore, and sheet metal men find Toncan a business builder—a source of satisfied customers. If you don't have the latest information on Toncan, write nearest distributor.

# Permanence

Conviction of the unimpaired usefulness of WEST BEND Aluminum has deepened, and broadened, and spread, and grown steadily stronger.

The history of permanence which is warm in the hearts of users of WEST BEND products constantly reflects the quality of the aluminum ware of their choice.

★ West Bend
QUALITY UTENSILS

The fact that every utensil bearing the WEST BEND Hall-mark is actually PURE aluminum is one significant reason for the popularity of our products.

And that each piece is stamped from a single sheet of metal, without seam or joint — made extra heavy where the wear is hardest—and with cool handles, are striking features that recall WEST BEND superiority.

Our original Sun-Ray Finish facilitates cleaning, and lends the brilliant lustre of sterling silver.

The teakettle illustrated may be filled thru the spout.

# —And now Horses are "Weed Chained to Safety"

# AMERICAN CHAIN OVER-SHOES

Protected by American and Foreign Patents

## The Principle of the Weed Tire Chains for Automobiles and Motor Trucks Humanely Adapted to Horses' Hoofs

American Chain Over-Shoes make horses sure-footed on ice and snow covered roads and pavements. The Chains are so constructed and arranged that they give the animal 48 points of contact—12 under each foot.

Awarded a prize of $500.00 by the American Society for the Prevention of Cruelty to Animals—the only one of its kind ever granted. Warmly endorsed by the Massachusetts S. P. C. A. and the New York Women's League for Animals.

American Chain Over-Shoes cannot injure the foot or leg in any way, as it is impossible for the chains or center link to touch the frog. They also prevent the "balling" of snow and ice in the shoe.

American Chain Over-Shoes enable a horse to step out fearlessly on the slipperiest pavements and roads, and thus every ounce of his strength can be used for pulling power instead of being wasted in pitiful efforts to keep on his feet.

**Mr. Dealer:** Here's a real sales opportunity only measured by your willingness to accept our co-operation. To every dealer stocking American Chain Over-Shoes we will furnish attractive cards and folders printed with his name and address, ready to send out to all of his customers.

Order American Chain Over-Shoes from your jobber today. The Big Season is On. Act Now.

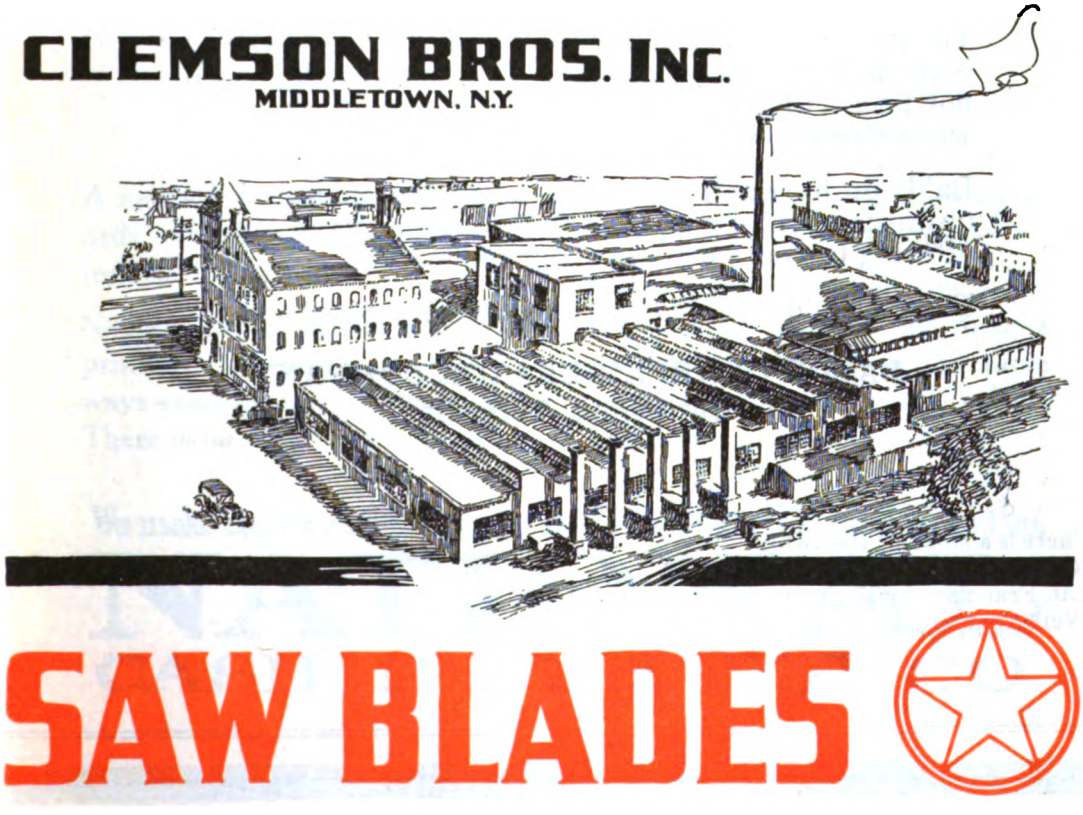
STAR HACK

Digitized by Google

# Besides Star Hack Saws?"



When your customer comes in, you are faced with the vital question of whether you will sell him a standard article which requires little selling, does your store credit, and is the strongest possible repeater, or whether you will spend a lot of effort in putting over some unknown article of doubtful satisfaction. Few merchants today hesitate in choosing the standard goods of known value which give the greatest turnover. Satisfy him that you handle only standard, well-known goods, and it is often surprising how liberally he buys from you and all his many requirements.

In hack saws the standard goods have been "Star" Blades since 1883 as all the trade knows. Star Saws are the only hack saws made. It is a dominating position that has been earned by 37 years of making hack saws so superior in faster cutting and greater toughness that no other make can stand comparison.

Now we have taken over the selling of our own goods so that we can deliver a service to Star users and the trade that is just as superior as the goods themselves. Our factory in Middletown, N. Y., which has made Star Saws since the beginning will now be the headquarters of our Sales and Service Departments, which will give you a more complete and effective service than ever before. We have more representatives in the field and they are at your services to help you build up the largest possible sale of Star Saws with factories and individual users.

Our large national advertising will be larger than ever the coming year, making Star Saws more than ever the largest selling blade and the most profitable for you to handle.

**In ordering through jobbers, be sure to specify "Star" and insist on getting what you order. All inquiries or direct orders sent to this office will have every attention.**

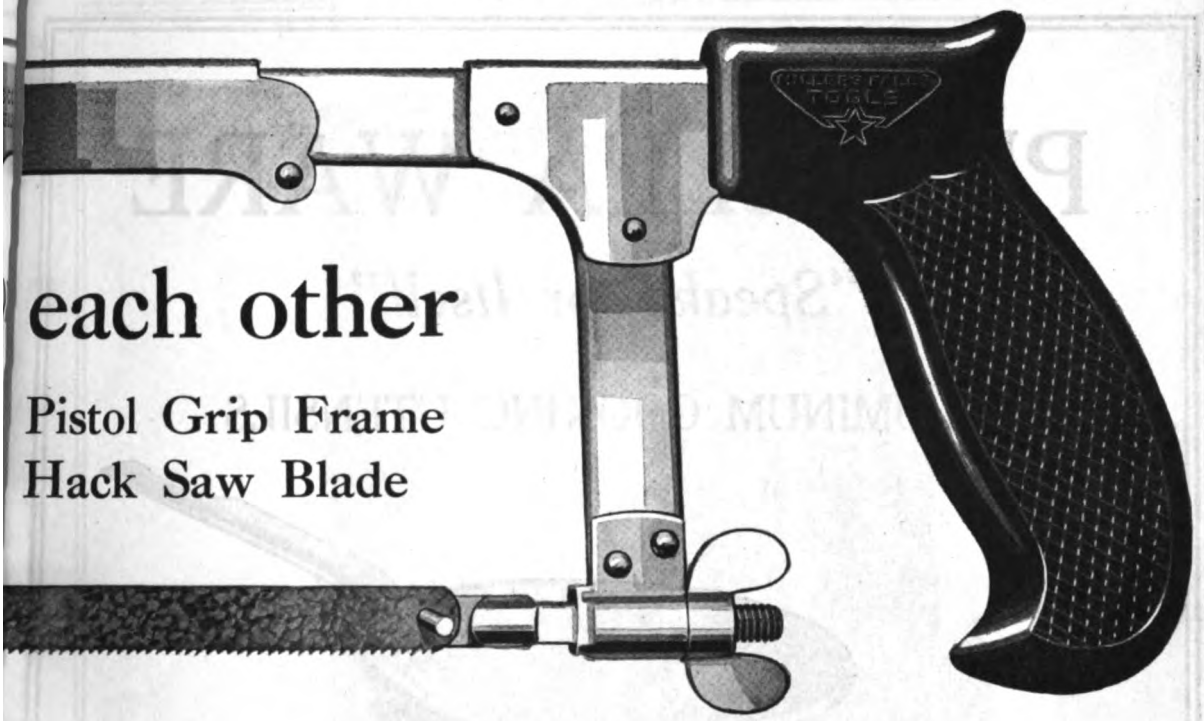
## No. 1027 Millers Falls and Millers Falls

MILLERS FALLS Hack Saw Blades set new standards—are worthy companions to our No. 1027 Pistol Grip Hack Saw Frame. Together they make a working tool that for its purpose can't be beat.



Millers Falls Blades are even-tempered — every blade in the box is alike—none too soft, none too hard. Each tooth is accurately finished—no strain points at the ends of the blade — no binding, therefore less breakage. And they **stay sharp** a long time.

You can get behind Millers Falls Hack Saw Blades and push them, because they merit it and make satisfied customers. This is a Millers Falls product, and is backed by Millers Falls Company guarantee of quality.

# These Sargent-made Tools Will Increase Your Holiday Sales

### SARGENT STEEL FRAMING SQUARE

A CARPENTER'S joy is in fine tools. Nothing could please him better, as a gift, than a Sargent Steel Framing Square. (No. 500 R Series.)

This is the only square made requiring no figuring by the carpenter, saving his time, and also avoiding possible errors, as there are no calculations to make. The required figures are all given in the rafter tables on the Square.

Sargent Steel Squares are made of high grade tool steel in five dependable finishes.

Suggest Sargent Steel Framing Squares as gifts. They will swell your holiday profits.

### SARGENT AUTO-SET BENCH PLANE

EVERY carpenter should have a set of Sargent Auto-Set Bench Planes in his kit. It is a light plane for both light and heavy work.

Excellent balance, ample handle room, and the ease with which it cuts with or across the grain, without chatter, all recommend it to the lover of fine tools.

What most appeals to carpenters is the Auto-Set feature by means of which he may adjust the depth of cut as he planes. Cap iron and clamp are in one piece and the blade may be removed and whetted, then replaced to position without readjustment.

Made in six sizes. A very fine thing to recommend as a gift.

# "My Best Christmas Present"

National STEAM PRESSURE ALUMINUM COOKER

This Christmas hundreds of women everywhere will receive as gifts NATIONAL STEAM PRESSURE ALUMINUM COOKERS.

In justifiable pride, each recipient will hasten to display her "best Christmas present," and tell all about it to many friends.

**In the gay festivity of Xmas-tide, when hospitality is at its height, these friends will partake of foods deliciously prepared the NATIONAL way. They will relish the exquisite flavor, the appetizing tenderness, which cannot be obtained by any other method of cooking.**

**They are bound to hear, through satisfied users, as well as through dominant national advertising, that food is cooked in the NATIONAL COOKER in one-third the time ordinarily used, and at a saving of one-fourth the fuel energy.**

These deeply interested, prospective buyers are going to ask for the NATIONAL STEAM PRESSURE ALUMINUM COOKER. Be ready to supply them.

Get in touch with your jobber at once. If he cannot take care of your order, write us, and we will supply you, allowing generous discount from prices.

Hygrade

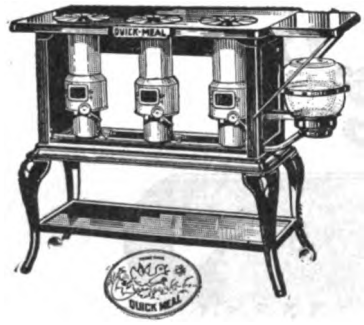
## A Use for Every Lamp

While some of these lamps, such as street series, country home lighting and the larger gas-filled lamps, are used for particular purposes only, most of the types illustrated here have a place in every home, office and factory.

B type lamps for ordinary fixtures, gas-filled lamps for semi-indirect and large fixtures, frosted lamps where the light shines in the eyes, WHITE Hygrades for decorative effects and soft light, tubular lamps for show cases, sign lamps for every progressive store—

What a wonderful field there is for the merchant who sells Hygrade Lamps.

## A Complete Line—Persistently Well Made



The illustration shows some of the different types of lamps made by the Hygrade Lamp Company—practically every type except miniature lamps.

The assortment runs all the way from the tiny 5-watt sign lamps to giant 1000-watt gas-filled lamps.

Counting the various sizes and including bowl-frosted and all-frosted lamps, the Hygrade Lamp Company makes altogether 253 different types of lamps.

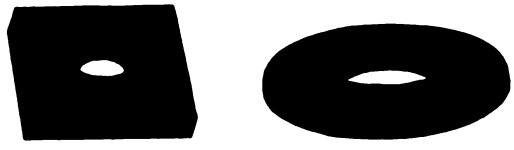
## The Only Screw Holes In the World



### The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

**THE STINE SCREW HOLES CO., Waterbury, Conn., U. S. A.**

## The Window That Gets the Christmas Business

There's a lot of Christmas firearms business. The father who wants his boy to have a **real** boy's rifle. The wife who wants "father" to have the "best sporting rifle in the world" for his annual hunting trip. The household that needs the real unwavering protection that only a Savage Automatic can give.

Savage advertising of Savage quality during the past year was designed to help make Christmas sales.

A Savage window display during November and December will capitalize our entire year's advertising to your advantage.

# SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire Preventing

Home Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.
Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.
Send for Price List and Descriptive Statement.

# FORTY HARDWARE MEN WAKE UP

Shortly after noon, of a hot and sultry July day, I entered the Automobile Supply Department of a prominent wholesale hardware concern. Approximately 40 high caliber employes were in the office section—behind the display cases, "under the weather." Languidly they peered over papers, samples, catalogues, etc., apparently feeling, hearing and seeing nothing.

Action was as evident as though a calm night on the Sahara Desert.

Ink must have turned to chloroform. Everyone seemed to honor work so well they did not bother it.

I was scrutinizing a large sized electric auto horn on the display case. I touched the button, never believing it was connected, and away she went with a sound that scared me stiff, and shocked 40 men to their senses.

In two minutes "the dead came to life"—and behold the change—**shocked into action!**

**Moral: Blow your horn.**

As easily as reading this print, with determination and action you can **capitalize** on the

## GEM RAZOR REPLACEMENT PLAN

In the Fall of 1919, the Gem Razor manufacturers started placing on the market, through regular channels, the **most efficient** razor frame ever produced—technically known as "Model E."

Investigate and you will find a stronger spring to hold blade in and cover down; a new angle on the frame—accepted as universal, after constant test and experiment. Then observe the beveled edge of frame, removing all possibilities of "sticking," in razor's progress over the face, whether a smooth one or with many lines, furrows or wrinkles.

Results: **Smooth action.**

In addition, "Model E" is attached to a shorter and heavier handle, giving correct balancing qualities.

Five apparently minor changes, with one positive, important result, namely, **a perfect shave.**

**Burying valuable knowledge is a crime,** therefore, it is necessary that the facts be given to your customers who do not possess a "Model E." That includes all Gem razors purchased prior to the Fall of 1919 at least.

**IMPORTANT TO GEM RAZOR USERS**
**THIS IS**
**"REPLACEMENT WEEK"**
**ASK ABOUT "MODEL E"**

A sign as above, in your window, will start the event—an advertisement to that effect in your local paper will bring them in—and then, inquire from every purchaser of Gem Blades, "Did you purchase your razor prior to Fall 1919?" The answer governs the course of procedure.

Tell your customer the facts already given and show the "Model E" while doing so. He was prepared to spend 50 cents for a package of blades—now for an additional 50 cents he can obtain the blades, the "Model E" frame, improved handle and a new case.

You merely sell new complete Gem set.

**Yes, you are justified in smiling with confidence,** for it means greatly increased razor business, a cleaning up of the market, and your store as the **Shavers' Shoppe,** where things are done—timely and progressively. Watch how your blade business will increase, too.

**IMMEDIATELY is the TIME you should put this plan into work.**

# This Man Timed a Shave

Have you noticed what a demand there has been for time and labor saving devices for use in homes and business places? Men (and women, too) are buying those things that help them save minutes.

That is why more and more men are shaving themselves. They avoid wasting time waiting in barber shops.

That is also the reason that so many men are buying and using standard razors. Razors that are always ready to strop and shave.

The man who uses a GENCO Razor does not have to assemble it, run the blade through a separate stropping device, insert the blade in the razor and then adjust it before he actually begins to shave. Just a few licks on a good strop and a GENCO Razor is ready for the man's face.

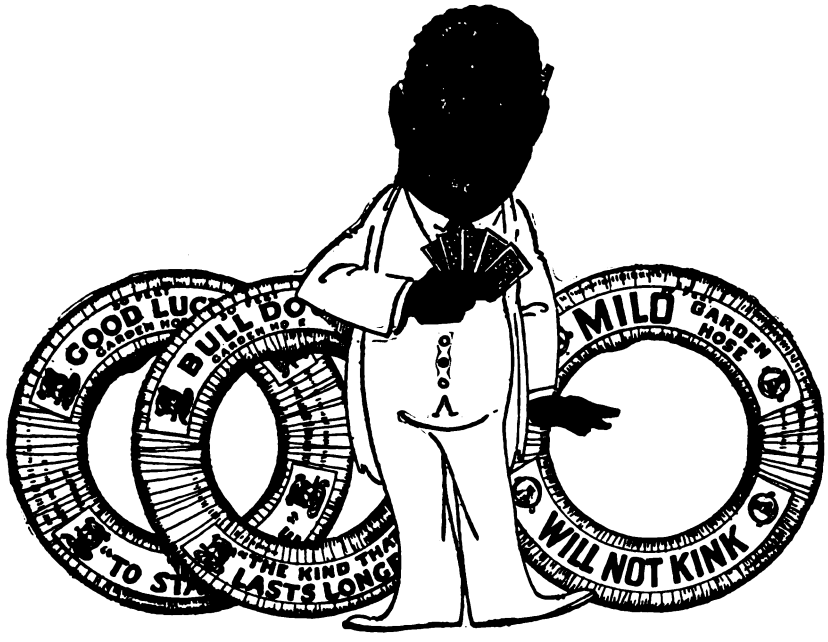
Then after the shave there is nothing to be taken apart, no teeth to be picked, no blowing out of lather and water. Simply wipe the lather from a GENCO and dry it thoroughly to prevent rust.

Those are some of the reasons for the continually increasing demand for Genco Razors. Here are a few more:

They are guaranteed.

They are nationally advertised.

They are made in a variety of grinds and bevels. There is a Genco Razor for every kind of beard and skin.



**The Genco Advertisement in Saturday Evening Post for December 4 will show the illustration above. Buy a copy of the Post for that date, cut out the ad and attach it to the inside of your show window. Couple up our advertising with your store. Make it work for you.**

# A Poor Rule That Don't Work Both Ways

SOME odd vagaries get into the never-ending controversy between "capital and labor." Perhaps the oddest of them is the assumption on the part of "labor" that "labor" means any physical act performed for hire by a person who is a member in good standing of an organization called a union—even though such members constitute not more than six per cent of the laborers of the United States; and that "capital" embraces everything that has not thus far been appropriated for wages, says J. W. McEachren.

Another vagary is that while "labor" holds that it has an "inalienable right to strike," that is, to quit working for any reason or for no reason at all, "capital" has no right whatever to reduce expense by curtailing production and reducing the number of men employed—that is, the number of "union" men. It is, of course, proper to lay off non-union men anytime.

Over in England recently the miners were taking a vote as to whether or not they should strike for more wages and a reduction in the price of coal. As "labor" never yet has set a point beyond which higher wages would not be demanded, it is presumed that English miners would not set a point below which they would not demand that the price of coal be fixed.

We cannot fancy a readier method of putting an industry quickly into bankruptcy than by increasing the cost of production and decreasing the selling price of the product.

### Overlooked One Side

The leader of "labor" in the United States said recently that "what is needed above everything else today is continuous operation of industry, with a fairness and honesty and intelligence upon the part of employers that will make continuous operation possible"; but he neglected to add, "and with a fairness and honesty and intelligence upon the part of employes that will make continuous operation possible."

It's a poor rule that won't work both ways, and the present rules in the conflict between "labor" and "capital" do not seem to be fashioned for working in any but one direction. Mr. Gompers says "the mills and the factories should run," but he appears to demand that "capital" shall do all the running, and "labor" may rest now and then, take a "vacation" or even go on strike.

When both sides to the controversy make rules that will work as well one way as the other, rules intended to secure fair play for all of labor as well as for all of capital, rules that will not be intended to affect six per cent of American workers and consider the other ninety-four per cent as beyond the pale, we may look for a real advance toward the solution of our present industrial problems.

Digitized by Google

## ASK YOURSELF

How much time out of each twenty-four hours am I spending in an intelligent, sustained effort to expand my business and to build for larger success tomorrow? Am I constantly remembering that whatever is worth having, is worth digging after?

Just what do you think you are? How do you sum yourself up? How do you price mark, and estimate yourself? We are just about what we think we are, when all is said and done! Are we relying too much upon someone else or are we developing a self-reliance which will make us strong to fight single-handed if need be, such obstacles as we may meet in our paths? Leaners are never nearly as strong as those who are leaned upon!

Am I realizing fully the great importance of accurate cost accounting? A large number of business men fail because they do not make close analysis of the cost-end of every sale. Consequently they live in a Fool's Paradise, making much smaller profits than they think they are doing. Sooner or later they are bound to meet disappointment and difficulties; for any normal individual will spend pretty freely if he thinks he is making plenty of money all the time. Don't be an echo. Be an original voice. Lots of people are content to do today what they did yesterday and do it in the same way. Progress represents improvement and a desire for better things. Don't let today be a mere echo of yesterday!

When I meet someone who is grouchy, two conditions may obtain. Perhaps he is tired; the tired person is nearly always depressed or irritable. Perhaps the grouchiness is a mere reflection of my own mental attitude. If the grouchy individual is fatigued, possibly I can do or say something to make him feel a little more rested and cheerful. Certainly I can prevent his being an echo of my own personality, by cheering up myself.

The world is full of men today who are doing big things. There are a good many to be sure who are just echoes. I am going to be one of those who determine what the world's echoes shall say, and I will try with all my power to add to the world's sum of joy, and laughter, and happiness, and serenity, and kindliness, and efficiency. Then I shall have no fear that the echoes I have started will ever come flying back to reproach me!

---

## REASONS FOR SALEMEN

If it were not for uninterested buyers there would be no need for salesmen. You owe your job to them. Therefore, instead of bemoaning the fact that a prospect is not interested, try to get the viewpoint that if he were inerested there would be no need for your calling; a catalogue or circular would be all that was necessary.

## HOW MUCH UNSALEABLE STOCK HAVE YOU?

A statistician is one who collects figures on various subjects, analyzes them, classifies them and hands them out to the people interested for the sake of improvement. His work is very useful, but he sure does take the joy out of life on occasion by giving us figures which are disconcerting.

For instance, he seems to have been traveling over the country taking a look at the shelves of country stores, and here is what he hands us:

He says there are four hundred million dollars' worth of unsaleable goods on the shelves and counters of the retailers of the country, and that most of this vast sum will be a total waste.

### Good Buying Not Easy

This vast waste is due to two things, he explains—careless buying and poor selling. Every merchant should sit up and observe these two points. Because buying is easily done, most buyers are prone to believe that good buying is an easy matter.

That is where they are wrong, where their confidence deceives them, and they pay largely for their blunders, though perhaps they never know it.

A good buyer in a store is justly considered a rare bird, and he is paid accordingly. For it is realized that upon his skill and judgment depends the profits or loss of hundreds of thousands of dollars.

He must keep his finger upon the popular pulse with the greatest skill and care. He must realize that goods which have been staple and popular for years often go out of fashion on short notice. He must know that the buying mood of the public is fickle as the wind. One year they want quality regardless of price; another year they may want price regardless of quality.

### Knowing When an Article Will Take

He must buy new and untried things. Otherwise he would become behind the time and be be dropped with haste. But it requires superjudgment to know whether any new article will "take" with the public, or receive the absent treatment. Therefore he must experiment; but if he is a wise buyer he will buy cautiously, in small quantities, and he will place the articles on sale in a conspicuous place to test the interest of the public.

Always his thought is, "Is this what the public wants?" He gives little heed to his own likes and dislikes of the things he buys. He effaces himself entirely and endeavors with all his skill to become an interpreter of the public desires.

Don't get the idea therefore that buying is an easy and simple matter. Otherwise you will help swell this vast total of unsaleable goods on the shelves of dealers.

# The Grasshopper or the Ant

**Each Teaches a Lesson for Every Young Man and Woman**

THERE comes to us a fable written by Robert Quillen, and recently published, which carries with it a lesson for our present generation.

We hear much about the world "owing us a living," but nothing of what we owe the world.

We have been preached at of what we ought to do for our fellow man, but hear nothing of what this same strong fellow man ought to do for himself.

We have sovietism and socialism given to us by politicians, sugar-coated over with nice sounding words and phrases to mislead and beguile, until one can hardly blame the unthinking, easily misled grasshopper from being what he is, but it is high time that there should be something more of true worth taught.

This is the fable:

Once upon a time, in a day when fairy tales were true, there lived in the country a family of grasshoppers and a family of ants. Some authorities incline to the belief that the grasshoppers were addicted to the jazz dance and the fiddle, but one is at liberty to doubt this.

The grasshoppers were industrious. They worked in the field, side by side with the ants, and they wore good clothes and chewed good tobacco.

In those days, as now, the first impulse or instinct of mortal or insect was to fill his stomach. If men could eat without working, few would work.

The grasshoppers worked diligently at the task of gathering herbs and grains, but as fast as they gathered they consumed, so that the setting sun found them none the richer, save for a comfortable fullness about the middle.

The ants did not neglect the business of eating. They fared well, but they had the savings-bank habit and they did not wear silk shirts while performing tasks that suggested overalls.

The grasshoppers called the ants tightwads. They did not use this expression in the presence of the ants. It is well to keep on good terms with a tightwad. Perchance one may need to borrow from him before the next pay day arrives.

Through the long summer the grasshoppers toiled and fed their faces, dressed to impress the neighbors and petted their appetites, and when the first frost of an early winter killed the green things in the field not one of them had a square meal in reserve.

When grasshoppers find the rations short they cast about to find someone on whom to fix the blame. As these stood in groups about the dismal field making talk concerning the injustice of the general scheme of things, one of their number, who enjoyed making phrases, hopped on a withered flower stem and unburdened his mind.

"We would not be hungry," he declared, "if we had the courage to demand our rights. There is enough wealth in the world for everybody. All that we ask is a fair division.

We are dead broke, while the ants have their barns filled to overflowing. Is this right? Is this justice? Is this democracy?

I tell you, my downtrodden brethren, that we are victims of a greedy and hateful system and shall all miserably perish unless we establish universal brotherhood and divide this supply of food accumulated by the ants."

I realize that all this seems incredible, but I hasten to assure you that it happened once upon a time, in a day when fairy tales were true and grasshoppers knew nothing of savings banks and had no brains worth mentioning.

## A CRIME TO DO SO MUCH

The story is told of a young man in Colorado, who was graduated this year from the University of Denver, that "he played football on Saturday, preached on Sunday, and on weekdays earned enough to pay his way through college. He was president of the student body, a member of a fraternity and active in half a dozen clubs as well as pastor of a Methodist Episcopal church."

In other words, this fellow brazenly violated every union rule by working wherever he could earn, working as long as he pleased, working as hard as he could, earning as much as he could, saving what he could, and acting in every way like a free and independent American citizen. Nothing less than a grand jury of walking delegates could handle properly an outrage like this.

For the convenience of our subscribers and advertisers, we maintain offices and our representatives will be found at any of the addresses mentioned below. Correspondence will receive prompt attention by addressing the office nearest home.

# Merchants Should Profit By Experience

(By Hamp Williams)

IN the general distribution of merchandise the manufacturer should furnish the jobber, the jobber the retailer, and the retailer the consumer. Each should charge the other a fair margin of profit, and the breaking over, or violation of that trust naturally opens up a market for the catalog houses.

The catalog houses go direct to the consumer. The retailer sometimes breaks away from the jobber and goes direct to the manufacturer, but in less proportion than the consumer to the catalog houses, for the reason that he must buy in large quantities and wait too long for his goods to depend altogether on the manufacturer. But there is a tendency to cut out the jobber altogether, not intentionally, however, but from force of circumstances. We all have participated more or less. While I am a retailer, I believe we are more to blame for these conditions than any other distributing medium.

HAMP WILLIAMS

Here is an unusual article from an unusual retail merchant. Mr. Williams is a close observer and student of business and business conditions. He knows the advantage of keeping close relations with his jobbers, and what he tells the HARDWARE WORLD readers is worth careful consideration. Mr. Williams invites any of our readers, manufacturers, jobbers, or retailers, to come back at him through our pages and tell him if they agree with him or not. Our columns are at the disposal of our readers.

In plainer words, we started it; we sold our goods too high. Our profits being great, we naturally became more and more reckless in handling our business. We sold on credit to customers who are not entitled to credit by any manner of means because we felt we were justified in taking the risk by reason of the excess profits, and the jobber did the same. Credits have been entirely too cheap. We also became reckless buyers and gave price little thought.

These conditions had exactly the same effect upon the jobber, and he too became intoxicated with big profits. Finally some shrewd business men discovered what was going on and saw what they conceived to be an opportunity to make a lot of money by going direct from the manufacturer to the consumer with all kinds of merchandise, because it is the same in every line.

These men started the catalog houses, and they started something when they did it. They started the jobber and the retailer to thinking and the manufacturer to acting. The trouble with us was we did too much thinking and talking, and not enough acting.

### Meat for the Catalog Houses

We continued selling on long credits and getting big profits, until the catalog houses became so numerous and so well established with the customer, that we couldn't throw them off, and then we began to fuss at the jobber, and he at the manufacturer for the very thing we ourselves were to blame for. This was meat for the catalog houses and they took advantage of it, and while we have been fussing they have been geting business.

But, this is not all. We have become re-intoxicated with big profits during and since the war, and if we don't watch we will go too far with it this time, and in the readjustment of prices catalog houses will beat us to it, inform the consumer that goods have declined while we are watching our local competitors, and through our conventions and other means trying to persuade him to hold up the prices as long as possible.

While we are doing this and holding up the prices 30, 60 and 90 days after the decline, the catalog houses will put about 50 per cent of us out of business. We had better watch them. They know what we are doing, because we tell everybody. We talk in our conventions, and it's no secret at all.

But, one thing is certain. We don't know what they are doing and will not know until after they have done it.

Digitized by Google

This brings me down to another serious matter as between jobber and retailer, both marked for the slaughter if we don't let up and change our manner of doing business. I say "We" because I am as guilty as others.

**Biting the Hand That Feeds Us**

When the retailers saw their business going to the catalog houses they blamed the jobber and began buying direct from the manufacturer. The jobber saw what we were doing and naturally he must sell goods to somebody or go out of business, and he started selling the consumer.

Now, if these conditions continue I predict many failures. The average retailer (and they are by far the largest distributors of merchandise of any in this country) cannot buy direct from the manufacturer. He has not sufficient capital to buy in large quantities and deliveries are too slow for him.

When he goes out the jobber must turn retailer, as some of them are doing now, and this will keep up until finally the consumers will have to look altogether to the catalog houses for all their needs. Barefooted, he will have to wait three weeks for a pair of shoes from Chicago; and when they come they don't fit. He needs a quarter's worth of nails and parcel post charges are more than the nails would cost, bought at home from the retailer.

And, finally when all the jobbers and retailers are forced out of business, the manufacturers and catalogue houses will have a convention. Then and there they will decide the fate of the consumer, who is always the goat, and is now digging his own grave by patronizing the catalog houses and going away from the retailer, his neighbor and friend, who represents the only natural, safe and legitimate way of distribution.

The retailer is going away from the jobber, his neighbor and friend, who represents another natural, safe and legitimate way of distribution. The jobber is also going away from the retailer, his neighbor and friend, who represents another natural and legitimate channel of distribution.

**We Can All Help Some**

Now, if the jobber will sell less to the consumers, and the retailers will buy more from the jobbers, that will help some.

And, again, if the jobbers will make such prices to the retailer as will enable him to compete with the catalog houses that will help some more. After this is done, if the retailer will sell for cash, and meet any and all catalog house prices, that will also help. Then when prices start down don't let the catalog houses beat you to it. They have the same thing to combat as we—a lot of high priced goods on hand to sell when the decline comes.

But, the difference between their way of doing business and ours is, that when they unload these high priced goods and begin to get goods at a less cost they start selling for a less price, while we, or a good many of us, hold on to high prices regardless of the cost, until we are choked off by competition. Oftimes, when the jobber makes us a price to meet catalog house competition, we abuse it, and continue to sell at high prices, believing that the consumer will not find it out. But he does find it out and we do not know it.

## RATHER ODD WORSHIP

One of the candidates for high public place in Washington says in a book he has written: "The man who builds a factory builds a temple, the man who works there worships there, and to each is due, not scorn and blame, but reverence and praise."

Have you ever walked into one of these "temples," say, within the last year or so, and listened to the "worshippers?"

Have you been struck by the "reverence" shown and expressed for the man who builded the "temple," and have you listened to the anthems of "praise" as they came from the lusty lungs of the "worshippers?"

I have. And if every factory is a "temple," and every man who works there a "worshipper," then I have to go into some far place and revise my conceptions of temple and worship.

## THE BEST TOWN ON THE MAP

(By John C. Wright)

It's not in distant Asia, in Egypt or Japan.
It's not in France nor Russia nor on the Isle of man;
It's not in Greece nor Italy, nor far away as Nome—
It's in the county where you live—the town you call your home.
Be always glad to praise it up, no matter where you are;
Be ready to defend its name and spread it near and far;
And when you hear some knocker knock, respond at every rap:
"The town where I am living is the best one on the map."

If any town in which you dwell is backward, dull or slow,
Why don't you try the boosting plan and help to make it grow?
It's little use to villify, to kick and run it down—
Such antics never built a shack, nor ever made a town.
If you would have your burg become a busy, growing mart,
Just put your shoulder to the wheel and help it get a start;
And let this little motto be enshrined beneath your cap:
"The town where I am living is the best one on the map."

## SUGGESTIONS FOR SELLING KITCHEN CUTLERY

The young housewife who has been forced into the kitchen by the shortage of domestic help during the past few years, has learned many things, among them the fact that nothing adds more to the efficiency of the household and kitchen than the utilization of good tools.

How few women, for instance, own a really suitable set of knives for the preparing of vegetables and meat? The modern housewife should remember that her tasks are very similar to those of the professional butcher and that there are hundreds of forms and styles of meat-preparing knives in the market, all to be had at a very reasonable price and each serving a very distinct purpose.

Professional butchers, for instance, are using beef-shavers, boning knives, brisket knives, carving knives and many others. Each of these is used for a special part of the work and each is designed in the form most suitable and convenient for use.

A good set of kitchen knives should embrace the following selection: One large cook's knife with large blade, having a well-rounded edge running to a sharp point. One scimeter steak knife for cutting large slices of meat or fish. A cleaver for the heavier work. A spatula, which is a long, flat blade used in the turning of pancakes and other such objects, also being used in connection with baking. Two or three knives for ordinary cutting; one of these should be well pointed, while the others should be of the more ordinary type. One or two small, sharp vegetable knives will come in handy.

The selection of knives should be guided by personal taste. Don't forget the grape fruit knives, and all the regular table cutlery, a plentiful supply of which, all set in proper order on the table, adds much to the reputation of the modern housewife. In the making of table and butcher cutlery the American manufacturers stand head and shoulders above the rest of the world.

Be fair—and that means not to take advantage of anyone's ignorance or any peculiar combination of circumstances.

---

If your store methods cannot be improved, why are so many people showing a preference for some competitor's store?

---

## TEN THINGS FOR SALESMEN TO THINK ABOUT

1. Our customers judge this company by what they think of you.
2. Old customers are new customers who have been rightly treated.
3. The recollection of pleasant treatment remains when everything else is forgotten.
4. Do not expect a customer to believe what you do not believe yourself.
5. Courtesy always pays—and you are paid to be courteous.
6. Two are required to make service perfect, the server and the served; and you are always responsible for your part.
7. Our satisfied customers are our most valuable asset.
8. Let your willingness outrun your obligations.
9. We exist not alone for today. We live for tomorrow also.
10. No article on which is the name of your firm is completely sold until the customer returns to buy again.

---

If you would be successful, never hesitate to work, for work is what makes the difference between what we would like to be and what we are. Indulge your imagination, for this pictures what you may be. Never stoop from a high order of integrity, for integrity is absolute dependability, and get ready to give service, for after all this is what you are selling—whether it is in the form of goods or advice or skill. When you have learned to embody these elements into your day's work, you will have no need to fear the future.

---

## SHELF ADVERTISING

Do you know the shelves right back of your counter are the best advertising space in the store?

These lower shelves should be used for profitable goods, with large, attractive, easy reading signs, and changed often.

## THREE MIGHTY WORDS FOR SALESMEN

These are the magic words of salesmanship —Listen! Agree! Oblige! But the average untrained salesman does not know the power of these words, says Herbert N. Casson.

Usually, he has three other words—Talk! Argue! Compel! These three words have spoiled many a sale and lost many a customer.

Of course, we do not mean that a salesman should surrender to a customer; but we say that he should avoid all appearance of compulsion.

The art of salesmanship is in getting the customer over to your point of view without pushing him. And the secret of doing this is really to desire to be helpful, both to your firm and the customer.

If you don't believe this, please give it an honest trial on at least three customers. Try it for one day, anyway, and see what will happen. Listen! Agree! Oblige!

## PRACTICAL TALKS BY BABSON

(By Roger W. Babson)

Have you ever had an idea?

Nearly everybody has.

I've often wondered why we don't get the benefit of some of these splendid thoughts.

I was talking it over with an advertising man and he offered a suggestion.

"It seems," he said, "that an idea is good only as it is used.

"It is like our muscles.

"Ideas need exercise to amount to anything."

You've met men that talk vaguely about a great idea they have.

You meet them a couple of years later and they are still talking about the same idea.

Frequently they live and die talking about this idea, and it is a crime, because the world has lost the use of a creative genius.

Traffic in the think tank has been blocked by a single obstacle.

If you want ideas, you'll have to act on them.

When an idea appears, get immediate action on it.

If you can't put it into practice at once, write it out in full and file it away where you can get it when you need it.

The result is the same in either case—the decks are cleared and the door is open for another idea.

## THE FIRM FIRST

Safety first is good, the customer first is better, but the firm first is best of all. If you, Mr. Salesman, don't assist in every honorable way to make money for the firm, you are dead wood. But if you are loyal and live up to "firm first," you are doing noble work, and your services cannot easily be dispensed with.

## HELPS TOWARD GOOD SALESMANSHIP

There is a new revelation coming in retail hardware, just as there has been a new revelation in the world at large. It is broadening and brightening, with greater rewards for store owners and richer prospects for the store salesmen. Now is the time for every salesman of retail hardware to frame up the ten precepts of his business, as:

Respect your store and your employer, for their importance is your importance.

Do your week's work in one week's time and don't try to stretch Sunday out to a loafing Monday.

Call on the store manager oftener than on the cashier, because your money is where you make it, not where you find it.

Don't lay down on your trade.

Don't substitute and don't try to sell anything that's "just as good."

Don't knock another salesman; it merely makes him knock you.

Tell the truth about your stock—to your boss as well as to your customers.

Don't steal the store's time. You might as well steal its money.

If you can't see opportunities, make them.

Sell goods.

There is only one thing to add to this review of retail hardware salesmanship:

It is a good job, even when it seems like a bad one. All you need to do is to keep a tight grip on it, and keep on gripping.

---

If your customer does not believe what you say about the goods, perhaps you have said too much. Don't exaggerate values.

---

The man who talks loudly and uses overemphatic language worries and tires his prospect. Use a moderate tone of voice—rather a low one. This will concentrate the attention of the other person and will not irritate him.

---

As soon as you begin to argue, you lose your hold on the other person and argument lines him up against you. Just listen, smile, illustrate your point, and incidentally hand out some complimentary remarks to your hearer, and in nine cases out of ten, you will win the day.

---

When you wish to convince someone of something, avoid questions — especially those which can be answered by the word "No." Make positive statements and prove them, for statement without proof means little. When you begin to criticise something which your business prospect admires or is convinced is good—you virtually criticise his judgment. Don't do that. Don't knock. Just show why what you are offering is superior and worthy.

# Make Christmas Buyers of Your Customers

It is not necessary for the hardware dealer to play the role of Santa Claus in order to serve his customers during the holiday season. He is well situated to take advantage of the unmistakable trend toward practical, useful presents, as his store is stocked with articles which appeal to men, women and children. Numerous dealers have found it advantageous to advertise their stores as Christmas headquarters, and to supplement their newspaper advertising with various selling stunts, which include attractive displays of articles adapted for Christmas presents.

The holiday trade is a prize sought after by the average merchant; for at this season net profits may be substantially increased. The well stocked hardware store may be made an attractive Mecca for the Christmas shopper who is in search of quality goods.

**Make Your Stock Known for the Whole Family**

A stock of hardware includes something for every member of the family, while the range of prices covers a sufficiently wide scope to meet the requirements of any purse. The experienced shopper in search of Christmas gifts finds he can get more value for his money in the hardware store than anywhere else.

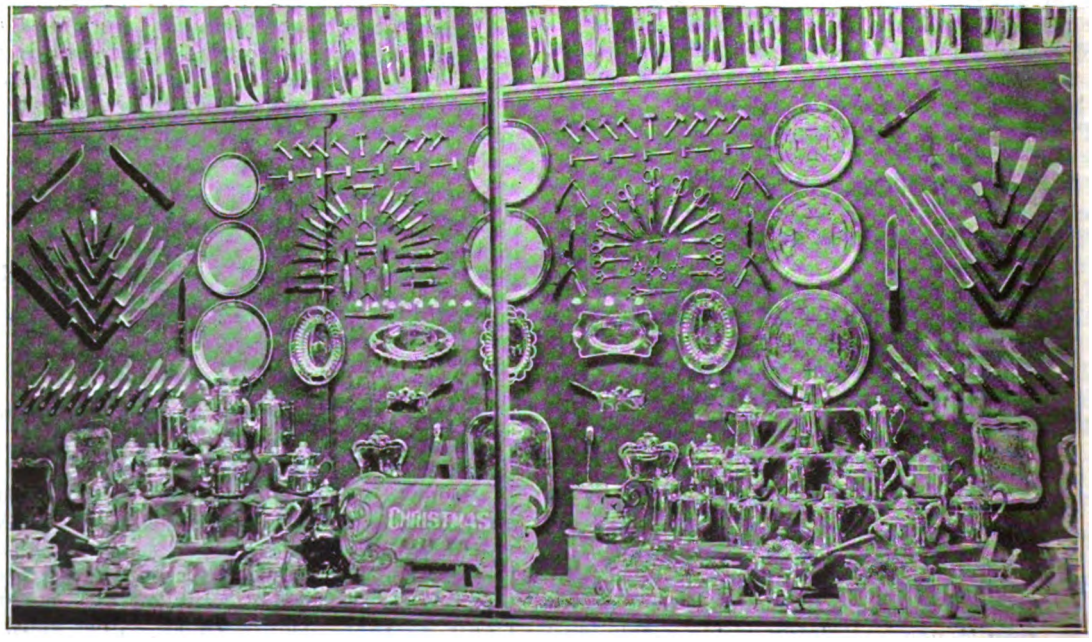
Wide-awake hardware dealers are planning to take advantage of the opportunity which exists for increasing trade during the coming holiday season, and are reviewing lists of articles which are likely to be in greatest demand. They realize that all the sales aids in use will avail them little unless they have a well selected stock.

**More Business, if You Tell About It**

In their advertising messages, dealers will place emphasis upon the utility of their stocks as gift possibilities, and will show the advantage of exchanging useful presents which will be a pleasant reminder to the recipients every day in the year.

**Some Presents for the Housewife**

Articles designed for the use of housewives easily become best sellers.



Silver plated and nickel plated ware are in strong demand at Christmas time.

Fancy teapots,
Casseroles,
Salt and pepper sets,
Percolating urns,
Sugar and cream sets,
Fruit baskets,
Butter dishes,
Spoon trays, and
Coffee sets,

are gifts for ladies which can be counted on to please.

Dinner sets,
Berry spoons,
Cream ladles,
Gravy ladles,
Fruit knives,
Tomato servers,
Pie servers,
Sugar tongs, and
Fruit knives,

are offered as examples of useful, attractive articles, which dealers sell in large numbers for Christmas presents.

**Here is a suggestion for a sales window, showing merchandise particularly appealing to the women folk of the household.**

Digitized by Google

Occasionally a customer is found who desires to invest in an article of an extremely practical nature. This is why dealers recommend power washers as Christmas presents. At first thought it may seem that the power washer is out of place as a best seller at holiday time. In many homes, however, it would be more appreciated than any other article.

**Suggestions to the Husbands or Children**

The housewife who has been injuring her health and wasting time and energy bending over a tub and board when wash day comes around, is certain to be pleased with a power washer, which reduces her wash day into a wash hour, and removes from her mind the dread formerly attached to the coming of blue Monday.

The holiday season is an excellent time to call the attention of men folks to the advantages of the power washer. The man who desires a practical present for a hard working wife cannot go wrong by selecting a modern power washer. There is so much interest shown in lightening the housewife's burdens, that the opportunity for making power washer sales this season is unusually favorable.

**Gifts for the Entire Household**

Heating stoves, cook stoves, ranges and oil stoves are frequently purchased for Christmas presents. A new range, for example, is a present for the entire family, which will be particularly appreciated by the housewife.

Other practical articles suitable for gifts include roaster sets in small, medium and large sizes, flour and bread boxes, sugar and coffee boxes, pie and cake closets, household scales, mop wringers and food choppers.

**The Modern Vacuum Cleaner**

The modern vacuum cleaner is a sample of the practical articles in demand for Christmas presents, as its ability to clean floors, upholstering, rugs, curtains, etc., without the work of sweeping or beating, endears it in the mind of the housewife.

A dealer states that he recommends electrical devices, such as electric irons, hair driers,

**Here is a more elaborate sales window of Christmas gifts, one that will repay the time and efforts spent. Such windows should not be too crowded, and instead of decorating with palms, evergreens or bouquets of red berries would lend a holiday suggestion.**

Digitized by Google

toasters and percolators, when a customer is in search of practical gifts.

**The Things Men and Boys Want**

The hardware dealer's assortment of shot guns, rifles, pistols, cutlery, auto accessories and tools simplifies the selection of useful, desirable gifts for men and boys.

"I am always glad to have lady customers look over my stock in search of presents for their male relatives," explained a dealer. "My first move is to inquire regarding the hobby of the person for whom the gift is purchased. If a man doesn't care for hunting or target shooting, I find out whether he likes to overhaul his car, or make things with tools. Providing he is an amateur mechanic, I recommend something modern and complete in tool kits.

**Auto Accessories and Cutlery Make Desirable Gifts**

"My auto accessories department is filled with articles suitable for Christmas gifts. Spot lights, wrenches, valve grinding tools and various other articles are appreciated by the auto enthusiast.

"My cutlery department is of interest to Christmas shoppers. A new knife is always appreciated by the man or boy who receives it. The youth of shaving age can make good use of a complete shaving outfit, while a good razor is often the best present a man can receive.

**Flashlights Instead of Candles**

"A line of flash lights will assist in getting the trade of Christmas shoppers. Nickel plated vest pocket flash lights, as well as the larger sizes, are suitable presents. It is safe to count on a good demand for flash lights during the holiday season. I display my line of flash lights in a show case, using advertising placards to attract the attention of customers who enter my store."

The dealer who sells toys is not wasting his time distributing worthless goods; for constructive toys have an important place in the household. It is to the hardware dealer's interests to supply his customers with good toys. A dealer who knows how to draw the holiday trade says he has built up a good business in structural steel building outfits, ice and roller skates, bicycles, tricycles and coaster wagons.

"I feel that Santa Claus should present boys and girls with the kind of amusement devices which will assist in their mental and physical development," remarked the dealer. "Take the structural steel building outfit, for example. It is something which every youth who is mechancially inclined should own; for it teaches modern building principles and mechanics.

**Toys With Ideas Behind Them**

"I also make a specialty of the sale of electrical and mechanical trains. There is no better indoor amusement for boys than operating the trains.

"I am also interested in pushing the sale of devices which assist the youth in enjoying outdoor sport—sleds, skates and coaster wagons are very desirable presents for children, and sell readily.

"There is a growing demand for carpenter tool outfits for the use of youths who are taking manual training in public schools, or who have inherited a desire to make things. The demand for such tool combinations is continually increasing. A line of toys assists in bringing the Christmas atmosphere to a hardware store, and putting the dealer in touch with new customers."

My Dear Little Friend:-

Well it surely has been a long time since I was in Kingsville. Yes: it has been a year and a lot of things have happened during that time, but I sincerely hope that you have been a good little boy or girl, for you know that your "BIG FAT FRIEND" loves good little children.

Now, what does my little friend want for Christmas? I have just lots of toys that I have made up since I saw you last and I am sure that some of them will please you: I want you to see my complete line of toys that I have left with The Kingsville Lumber Company. You will find toys of every description, Dolls, Games, and lots of other pretty things that I haven't time to tell you about now, so I want you to tell your brothers and sisters if you have any and all your little friends, as well as papa and mamma to come and see them.

Last year I came to you in an Aeroplane, but this year I am not going to tell you how I am coming to Kingsville, but you can rest assured that I will be there without fail on December 1st, at 2:30 P.M. and I sure want you to be at The Kingsville Lumber Company Hardware Store with all your little friends to meet me and see what I have for you as a souvenir of my visit this year. It will interest you, because if you are the lucky one you will receive a cash prize.

Now I must close as I have lots of letters to write to the other children, so Goodbye, I am going to look for you on Saturday, December 1st.

Your loving,

"Santa Claus."

Typical of many HARDWARE WORLD subscribers is the enterprising Kingsville Lumber Co. There are a large number of lumber companies who handle complete lines of hardware and household furnishings, sporting goods, accessories, toys, China and glassware. We have previously referred to their enterprise and progressiveness, and here is a copy of a letter they issued one Christmas a few years ago. It should serve to give merchants suggestions in the way of interesting the children of the household.

The Kingsville Lumber Co. maintain an up-to-date mailing list, not only of the grown people of their community, but of the children as well. Merchants in any community can act upon this suggestion.

## WHEN YOU TAKE YOUR SON INTO BUSINESS WITH YOU

(Copyright by Elton J. Buckley)

An editor who publishes these articles from time to time invites me to discuss the taking of one's son into one's business; in other words, the legal points which a man should consider when giving his son an interest in his business. Of course there are legal points in such a situation, for taking one's son in is not in any material sense different from taking a stranger in. In fact, as the attitude of a son is apt to be much freer than the attitude of a stranger, and the chance of trouble at least is as great, it behooves the man who takes in his son to consider even more carefully than the man taking a stranger in. First, because of the son's possible attitude toward the father, and second, because of the father's possible attitude toward the son.

I have written more or less of the legal precautions which one should take when he takes a stranger into his business, but not at all, I think, on the taking of one's son in.

Generally speaking, there are three ways in which a father may give his son an interest in his business.

1.—If the business is incorporated, he may give him a block of stock.

2.—If the business is not incorporated, he may give him a partnership interest.

3.—If he does not wish to follow either of these courses, he can give him an interest in the profits.

I have seen quite a few instances in which one of the first two plans was used, and nowadays I never advise either of them at the start. A father will feel a great flush of pride and satisfaction because his son is coming in with him. Often nothing will do but to give him a substantial interest in the business, either through stock or partnership interest. He usually doesn't consider whether he and his son, in this wholly new relation, are likely to get along well. He does not reflect that in making the son a fellow stockholder or partner, he puts in the son's hand a weapon which can cause him all manner of annoyance.

In many cases of partnership between father and son there have been quarrels far more bitter than those between strangers. I can think of four cases offhand this minute where generous fathers gave sons partnership interests in their business, right at the start, and where the result was the complete destruction of the friendly relations between the father and son and the very decided injury to the business. In one case the business was destroyed.

I remember another case where a father incorporated his business and gave his son 25 per cent of the stock, which made him an important minority stockholder. Within six months friction developed and the business was being fought over in the courts before the year was out. The cause of it all was difference of opinion between father and son over the conduct of the business.

There was still another case in which the owner of a large retail hardware business decided to give his son an interest in the business. The son was an automobile salesman about 27 years old and had made a moderate success. As a partner for his father, he was of course an unknown quantity.

The father was all for giving the boy a third interest in the business at once, and intimated as much to the son. But before he did it he came to me for advice. I advised him not to give the son any interest whatever at first, but to give him a third interest in the profits, for a certain period, during which he could size him up and see whether he wanted him for a partner. He was very reluctant to do it, but I convinced him and he broached the matter to his son in that way. The latter was furious and greatly displeased, and an argument ensued which put an end to the whole project. Here the son revealed an ugly side to his character which would certainly have sent the business on the rocks if the father had carried out his original intention.

"Be sure you are right, then go ahead," applies very closely indeed to this question of taking one's son in partnership. Get him in by all means if you can—it must be an enormous satisfaction to have your own boy working side by side with you, if relations are congenial. But if it is hell to have to work with a stranger as an uncongenial partner, it is doubly hell to have to work with one's own son in that way. No matter how much confidence I had in a son, and how well I thought I understood his capacity and his disposition, I should never give him an interest in my business until I had tried him out in the precise ways he would have to work if he were a partner. While he was doing that I should give him an interest in the profits, which would bring him the same financial returns as if he were a partner. If he stood the test, it would be easy to give him an actual interest; and I could do it then without fear. If he did not stand the test, there would still be time to avoid what might have been a fatal mistake.

---

## A SOLID REASON

Two young men, supposed to be busily employed in the rear of a Cincinnati hardware store while the principal looks after things in the front, were recently startled by the appearance of their employer while they were engrossed in a game of dice.

The proprietor was indignant. "How is it," he demanded, "I scarcely ever find you fellows at work when I come in?"

"Well, sir, I'll tell you," volunteered one of the youths. "It's on account of those rubber heels you wear."

## NO ONE A FAILURE UNTIL HE LOSES COURAGE

"When you get into a tight place and everything goes against you until it seems as if you cannot hold on a minute longer—never give up; for that's just the time when the tide will turn."—Harriet Beecher Stowe.

If everything went along swimmingly forever and a day, business would lose its zest and become a tame affair indeed. On the other hand, no one relishes the testing times when everything seems to go wrong in spite of fate. And yet those are the very times which make a career worth-while or worthless.

Have you ever read a story written by some skillful fictioner, and been so held and thrilled by the suspense woven into the telling of the tale that you could not lay the book or magazine down until you found out the solution of the puzzle, or who won the girl, or committed the murder, as the case might be?

Without that thrill and suspense, the story would not have interested you. It would not have been printed, for the editor would not have considered it worth paper and ink. And in the lives of the characters portrayed, that struggle was the most vital, the most decisive, the most determining of a life time. Doubtless the characters, if they really lived, may not have enjoyed the struggle when they were going through it, but once it was triumphantly passed, they would not have eliminated it from their lives for anything in the world. It was the struggle which really counted!

And so it is with all tight places and all struggles and business crises. At the time, we worry and perhaps figuratively speaking, sweat blood. There are times, too, when we feel that we cannot hold on a minute longer; that another six weeks like the last, or another month like the one we have just lived through, or even another day such as we have just finished, would be simply intolerable—and we bury our faces in our hands and say:

"We might as well give up. We cannot hold on any longer. And what's the use of prolonging a losing struggle, or torturing ourselves any farther on the road to failure!"

But not so fast, my friend, not so fast! You and I are not alone in the struggle. There are others who are having just as hard or harder times, and they are going through their testing periods even as we are. Remember you are not alone, and don't give up.

It is George Horace Lorrimer who says that, "Because a fellow has failed once or twice, or a dozen times, you don't want to set him down as a failure till he's dead or loses his courage."

### You and I Are Not Dead

That's the point. We don't want to give up. We are not permanent failures while we have the power to struggle unless we lose our courage. Then we are virtually dead ones indeed!

Besides we always know that a time must come when the tide will turn; when we will have proved ourselves so steadfast, so courageous, so worthy that help will come or events will change, and what seemed hopeless but a brief time ago, will be full of brightness and cheer.

It was a man with a large number of interests who paced the confines of his office restlessly. He knew that the men on the street were saying that he couldn't hold out more than half an hour longer. But none of them knew how he had fought for months and how he had twisted and turned to keep his business going.

There were times when he took the receiver of his telephone in his hand to telephone to his bank that it was all up with him, but every time he drew back. He would not give up. There were still twenty minutes before closing time. Something still might happen. Something did happen! It was a telegram offering him an astonishing sum of money for holdings which he had considered utterly worthless. The day was saved and his career as well.

But it is foolish to simply hold on and to make no definite effort to improve conditions at all. Struggle, but struggle to reach solid ground. Don't give up when it is darkest, for it is always darkest just before the dawn. Keep your courage, and your courage will keep you!

---

## TALK LESS

If all that we say
In a single day,
With never a word left out,
Were printed each night
In clear black and white,
'Twould prove queer reading, no doubt.

And then just suppose
Ere one's eyes he could close,
He must read the day's record through,
Then wouldn't one sigh,
And wouldn't he try
A good deal less talking to do.

And I more than half think
That many a kink
Would be smoother in life's tangled thread,
If one-half that we say
In a single day
Were left forever unsaid.

---

## WHAT A BABY CAN DO

A baby will make love stronger, days shorter, nights longer, bank-roll smaller, home happier, clothes shabbier, the past forgotten, and the future worth living for. Moral: Get—get—get—getta—Buy a baby.

# Getting Washing Machine Orders From Women

## Women Always Looking for Labor Saving Appliances

WOMEN have welcomed the innovation of the washing machine as they have welcomed no other invention. Pleased with it? There is not enough that they can say that will express their gratitude, and so they do not try to express it. They merely use the washing machine faithfully and regularly and—tell the neighbors.

The strange part of it is that as much as they enjoy the washing machine, now that it has become a fixture and such a welcome fixture in their homes, they were really very slow in adopting it. The average woman sent her clothes out to have them washed.

If they were done satisfactorily, well and good, if not, she changed her washwoman. The price was moderate. It was a job that she could not well undertake herself, and as long as the washing was done regularly and with a reasonable amount of satisfaction, the average housewife did not trouble herself further.

When the Bunting Hardware Co. of Kansas City laid in its first stock of washing machines, they entered most modestly into the game and placed an order for but twenty-five machines. They felt hopeful about the result, but it was a new venture indeed. When the machines began to sell, the fact is, the manager of the store was as much surprised as he was pleased.

There were a great many reasons why the machine took so well. One was that the women always have their eyes open for labor saving devices, but the average woman is instinctively economical. The initial cost of a washing machine is not inconsiderable and the housewife had to see where it would prove a good investment for her.

The great wave of economy that swept over the country as a result of the enormous expenses incurred by the world war, resulted in the housewife having to bear the brunt of cutting down expenses. Labor advanced at a furious rate, but the salary of the mainstay of the family did not perhaps advance as furiously, and even if it had, with a considerable percentage added to each expense of living, the salary must necessarily prove inadequate.

### Appeal to Economy One of the Best Selling Reasons

With food so high and clothing so expensive and labor out of sight, the housewife was compelled to cut where she could. The more of the housework that she could do herself or have done in her own home, the more money there was left for all the other expenses that accrue in a household, and the expense of washing is perhaps the biggest single expense of the week. Many a housewife watched the increasing wage demanded by the menial, who regularly took care of this part of the work, with ever increasing dismay.

To the average housewife, the weekly wash represents a few duties to her, such as checking out the clothing, checking it in again, when returned by the laundress, mending, sorting and putting away the fresh, clean clothing. To others it means a laundress coming to the house and all the muss that is usually connected with wash day, perhaps bringing in the clothes at the end of the day, ironing, mending and sorting.

The busy wife and mother who takes care of her home and family, usually has all that she can do without doing the washing and ironing. Imagine the worry that it caused her to have this expense increase, the laundress demanding more pay, running the bill up to $3.50, $4.00, then $4.50 a day, insisting upon breakfast, lunch and carfare, until she had incurred an expense that it was hard to meet.

This caused a great many women to turn to the washing machine and have the work done

**MISS LUCILE MacNAUGHTON**

The Bunting Hardware Company has been as notable and as successful in its advertising managers as they have been in their general merchandising policy, and the present head of this department is no exception to the rule.

Miss MacNaughton chose advertising as her life work and the hardware business chose her soon after her graduation from the University of Kansas, where she specialized in journalism, and was the advertising manager of the college daily.

Very naturally she is wrapped up in her work at Kansas City, lightening the manual labors of the women of her community and incidentally making more heavy the coffers of the Bunting Hardware Company.

Digitized by Google

That Washing Machines can be used to make an attractive display is shown by the work of O. J. Gress of the Bunting Hardware Co.

at home, perhaps by the maid, perhaps by themselves.

**Make Use of All Methods of Publicity**

But in spite of the great numbers of washing machines in use throughout the country, you will find numbers of women who have never used one, and a great many women who have never even heard of one. The Bunting Hardware store of Kansas City uses newspaper publicity to advertise their machine, but they are not satisfied with that.

They use every other kind of publicity that they possibly can. They encourage each customer to advertise their machine for them. Nothing is better advertising than a satisfied customer, so when women hear of a neighbor using a machine that they can conscientiously praise, they will have a great deal more faith in that particular machine, than in one that they merely see advertised in a newspaper and hear mentioned in no other way.

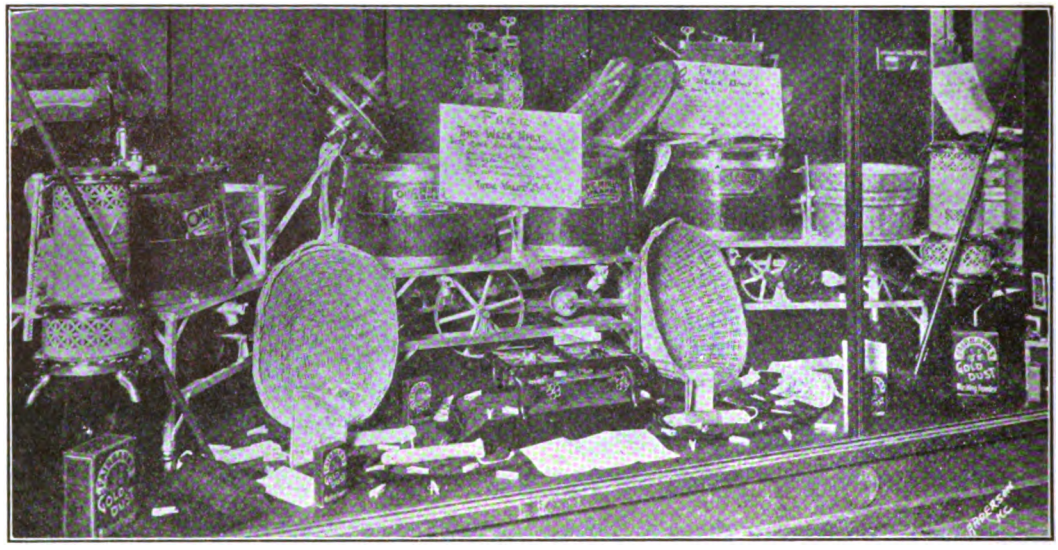
The Bunting store has such a big washing machine business and realizes the possibility of the washing machine business to such an extent that they go after sales good and strong.

**Selling Campaign Every Month**

One of their best methods of selling is to put on a regular campaign every three or four weeks. At this time they advertise extensively in the local newspapers. The advertising manager builds up ads calculated to draw trade. As a special incentive to buying during the sale or demonstration, a gift is given with each machine sold.

This gift varies each time, but it consists always of washing machine supplies, such as a laundry bench, a willow basket, washing powders, clotheslines, push brooms, O'Cedar mops, electric irons, etc.

**How Follow-Ups Are Planned**



The advertising departments sends out a series of circular letters inviting prospective customers to come in and see the machine demonstrated, to come in this week and take advantage of the special offer. A series of three good follow-up letters is usually sufficient to produce a sale. They are sent to the customer about three days apart, and as soon after the customer's name is secured as possible, because this store believes in striking while the iron is hot.

A cold prospect is no prospect at all. Other letters are sent to the sold customers, asking them to boost the machine to their friends and neighbors and offering them a prize for every washer they are instrumental in selling.

Here is a reproduction of the class of advertising which the Bunting Hardware Co. finds particularly appealing to the women of their community. They always show a cut of a woman, neatly dressed, doing her week's laundry, an almost irresistible appeal to the women folk of the household.

Digitized by Google

The accessories that go with the sale of washing machines are almost innumerable. Here is another practical sales window, the work of that practical and excellent window trimmer, O. J. Gress of the Bunting Hardware Co.

These letters are very well received by the customers and bring excellent results. One customer accompanied her list of names by a very human little note, in which she expressed herself as very fond and proud of her machine, in fact, she wrote, there was nothing she had that she cared more for, unless it was her "Old Man and her two boys. You may use my name if you like," she said, "for I will sure recommend the machine."

### Intelligent Salesmen and Women

The Bunting Hardware Store has a group of salesmen and women who fully understand good salesmanship. They know the object they are selling thoroughly. They use their utmost skill in demonstrating the machine to the prospective customer and as far as possible they put themselves in the customer's place. In using the customer's viewpoint, they succeed in selling, because they understand the difficulties under which the customer is laboring, and the difficulties which she is obliged to overcome.

The first thing that the Bunting Hardware Company did in breaking into the washing machine business was to pick a winner.

### Choose a Fool-Proof Article

They bought a machine that had been proven and found perfect. It was a machine that had been tested for years under all sorts of circumstances, a machine that would wash clean, that would wash delicate clothing without tearing; one that would wash heavy work clothing and get it clean, one that would wash heavy sheets and bedding, one that had the washboard features embodied in the tub, one that had all the mechancial parts under the machine, in a place where they could be easily reached, but in a place where clothing could not possibly catch on the parts and cause accident.

In fact, they got a machine that was as near fool-proof as it was possible to secure it. And in doing this they were very wise, for all sorts and conditions of women buy washing machines, women who are wise and women who are ignorant; women who are careless and women who are not. Washing is an operation that goes on in every home, so the high and low alike use the machine and the machine must be one with which no fault can be found.

The Bunting Hardware store has an easy plan of so much down and so much each month, so that even the poorest customer can become the owner of one of their machines. And it is not the poor alone who use the payment plan. A great many other people find it very convenient to use this system. They figure that the money they save on washing expenses will pay for the machine, and so the money that they save each week is laid aside for the monthly payment, with the result that the machine is very soon paid for.

### Spreading the Gospel of the Times

O, mechancial devices in the home are great for the women, and the modern Eve would no sooner consider washing over a wash board in a tub, lifting and filling heavy tubs with water or bothering with changing an old fashioned wringer, than any farmer would consider cutting his wheat with a sickle, or the city man having his letters all written out in long hand.

And so, as long as there are women in the world who do not own an electric washing machine, the washing machine business is going to be good.

---

Better the peace of little than the panic of too much.

---

The highest form of salesmanship is nothing but service.

# Pushing Holiday Articles

**Suggestions Merchants Can Use in Increasing Sales**

The "Do your Christmas shopping early" idea is gradually gaining ground, thanks to the vast amount of publicity it has received the past few years, but there are always people who need to be prodded each season if they are to get their shopping done in time, so no dealer should relax his efforts in this direction.

It is greatly to the advantage of the merchant as well as the shopper to have this pre-holiday buying period exteneded over a month instead of a hectic week, and the plan adopted by Hartleys, Fairmont, W. Va., was productive of excellent results. Realizing the housewives were the principal buyers, they sent to a list of their patrons, about the first of December, a merry little jingle:

THE WOMAN WHO WAITED

The Sad Tale of the Woman who DID NOT do her Christmas Shopping Early.

Said Hubby to Wifie, one morning at eight:
"Christmas shopping today; or waiting till late?"
Said Wifie to Hubby, "I've time to spare;
It's just past November, why hasten or care?"

So she waited and waited till three days before
The great day approached, then rushed to the store.
But she gave to her spending not a single wise thought,
So hectic her shopping, she simply just bought.

She pushed and she grabbed, had scraps with her Neighbors,
She was weary and torn, and sore from her labors.
Till on gay Christmas morn, when others were jesting,
She stayed in her bed, from shopping just resting.

And the gifts that she sent were "sans" rhyme or reason,
Dad's gloves were too big; mother's fan out of season.
Brother Ted was the butt of many gay quips,
For Sister had sent him some rouge for his lips.

Dear Prue looked with horror on a lace undershirt,
And Muriel gasped at a pipe, tagged for "Bert."
While Hubby, alas, had no present at all,
For Wifie had blundered and bought him a doll.

Two Morals:

Do your Christmas Shopping Early,
Buy Sensible Gifts at HARTLEYS.

### Hardware Merchant Well Equipped for Holiday Trade

The hardware man has gifts galore in his regular stock, even if he does not add a special stock of toys for the holiday trade (though it is an undisputed fact that the merchant who carries toys, dolls and games will have the biggest crowds coming to his store) and he should feature them prominently.

### Arranging a Skate Display

Take the matter of skates, for instance. A mere display of them will arouse interest, but

This ice skate sales window can be put in by any merchant who will follow the directions in this article.

place them on a model and arrange an appropriate background and you will have that intrest trebled. A handsome display of this nature was arranged by A. G. Spalding & Bros., Philadelphia, Pa.

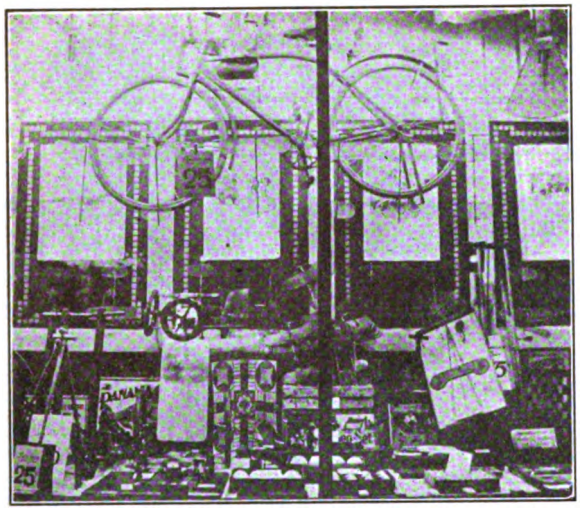
The background of the window was banked with branches of green, among which gleamed red berries. A large mirror was laid on the floor and soaped over to give it the appearance of ice. Around this was a deep border of cotton wadding. On the mirror stood a young woman in sport skirt of red, and sweater, scarf and cap of white. White skating shoes had steel runners attached; and the outfit was completed by an ice hockey stick that she carried.

### Selling Fishing Tackle in Winter

And speaking of ice, the Foster-Farar Co., Northampton, Mass., did a fine business in fishing outfits last season by featuring the novelty of ice fishing. Their announcement read.

FISHING THROUGH THE ICE IS THE GREATEST OF WINTER SPORTS

If you are an ice fisherman, you know all about it. If you have not been, you have a lot of real enjoyment coming to you. We can outfit you with the proper tackle—tipups, lines, hooks and skimmers for keeping the holes clear of ice.



Take along an outfit for your Christmas vacation. Buy one for your friend, and introduce him to the joys of this winter sport.

FOSTER-FARAR CO.

### A Live Seattle Institution

A hardware concern that is a firm believer in toys, not only at Christmas, but at all seasons, is Spelger & Hurlburt, Seattle, Wash. The big

Digitized by Google

Spelger & Hurlbut always have attractive sales windows. This reproduction on a small scale does not do justice to them, but it serves to show they are large factors in the distribution of toys of every description, as well as household furnishings, wheel goods, hardware, etc.

toy department is located in the rear of the store, so that to reach it one must traverse many departments—for though it is a hardware store, it is a thoroughly departmentized one—and thus have an opportunity to observe many household devices and outing paraphernalia.

"One of our best classes of sellers," said Mr. Lauridson, in charge of the department, "is the toy aeroplane, especially the 25c variety that can be sent through the air by hand. We have sold several thousand of them this season, and expect to have the sales mount to almost double that amount during the holidays. We also carry all the parts for making the more expensive airplanes. One of our recent ads was devoted entirely to this little toy. It showed a number of the planes in the air, and was headed:

A MODEL AEROPLANE THAT FLIES 300 FEET

Buy a 'plane and have an aeroplane race—more fun than an automobile or horse race.

Get one with one propellor or two; prices from $1.50 to $5.00.

Santa is coming from the North Pole in an aeroplane this Christmas. Tell him to bring you one of his latest models for a present.

The firm used their show window to back up effectively their printed page, as suspended from the ceiling by threads were half a dozen toy spinning planes. On a ledge rested two of the more expensive models, with little motor atachments, and in boxes were shown all the parts necessary for the construction of a first class toy airship. High up in the air was a late model bicycle, while on the rear wall were four panels showing bicycle races, bicycle tours, and groups of lads n wheels. This firm is one of the few hardware stores that carries a large stock of dolls. "All of our lines, with the exception of a negligible quantity of cheap Japanese dools, are of American manufacture," said the saleswoman in charge of this section, "and there has been a splendid demand for them all fall—and, of course, once they are advertised for the holidays the sales will increase rapidly."

## THE NEW FOURTEEN POINTS

One of our "wet" correspondents suggests that since the first 14 points were early abandoned, these should be substituted:

1. That the name of Brandywine, N. Y., be changed to Coldwater, N. Y.
2. That "Drink to Me Only With Thine Eyes" be made the National Anthem.
3. That all mention of the Bourbon Kings be expunged from school books.
4. That on account of being suggestive, rye bread be withdrawn from sale by all bakeries.
5. That no part of a ship be referred to as the saloon, for the reason that such reference might raise false hopes.
6. That all bars be removed from harbor entrances or be designated by some other name.
7. That the word "port" be expunged from navigation charts and references.
8. That the use of alcohol lamps be forbidden by law.
9. That the usless 9,000,000 white jackets and aprons in this country be sent to the starving Bolsheviki.
10. That the word "still" be expunged from the American language and all dictionaries, and the word "quiet" substituted.
11. That all mint be plowed under and vanilla beans planted.
12. That any barber tantalizing a customer by using bay rum on his hair be given ten years
13. That men with the "foot-rail" limp shall not be allowed to march in any public parades.
14. That all pretzels shall be made straight instead of bent in the old familiar style, to avoid reminiscences.

Don't expect poor work now to lead to brilliant work hereafter.

## I LOST THEM YESTERDAY

The little cares that fretted me,
I lost them yesterday
Among the fields, above the sea,
Among the winds at play,
Among the lowing of the herds,
The rustling of the trees ;
Among the singing of the birds,
The humming of the bees.

The foolish fears of what may happen,
I cast them all away
Among the clover-scented grass,
Among the new mown hay;
Among the husking of the corn
Where drowsy poppies nod,
Where ill thoughts die and good are born,
Out in the fields of God.

—Elizabeth Barrett Browning.

# A Young Woman Who "Had to," and Does

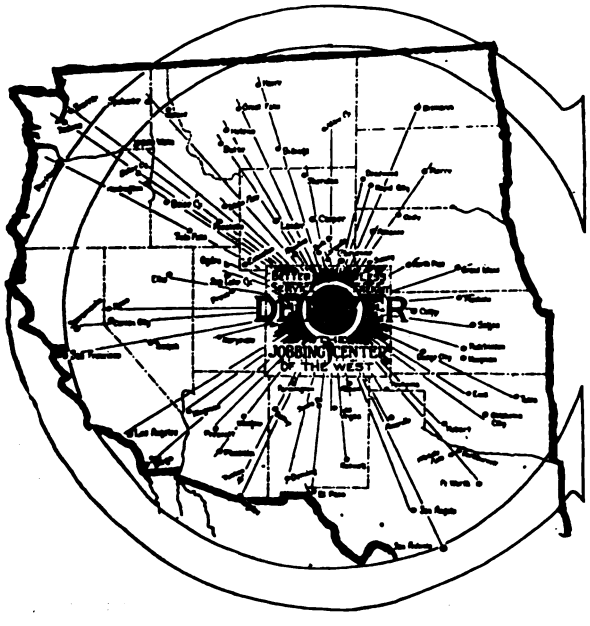
SEVERAL months ago we had occasion to introduce to our readers Miss Ida M. Conklin, private secretary to President Frank A. Bare of the Tritch Hardware Co., Denver, Colorado.

Yet it was a most formal and brief introduction. Since that time we have come to know Miss Conklin a little better, and we realize what a remarkable and noteworthy rise she has made among her fellow workers.

Knowing that our readers will agree with us that it is pleasanter and far more worth while to count such a young woman as Miss Conklin as friend rather than acquaintance, we take the liberty of telling our readers a little more about her. Particularly should our women readers be interested in the rise of this young woman to a position of singular prominence and responsibility in the hardware field.

For, irrespective of the natural elevation of Denver which gives her somewhat of a handicap at the start, we believe we are safe in saying that Miss Conklin holds one of the highest positions in the hardware trade that may be achieved by a woman in the United States.

As the confidential secretary to President Bare of the company, she herself admits that "the work is fascinating, constructive and far reaching — each day brings new duties, new problems, new experiences, more knowledge and greater opportunities in a rapidly growing business."



Thrown on her own resources at the age of sixteen, when her father died, Miss Conklin had to support her mother and herself and four younger children. In a small mountain town she studied stenography at night with the only stenographer in the place and completed her course in six weeks. Then she took a position in a lawyer's office for the large salary of one dollar a week. It was there that she studied and learned typing.

To secure an enlarged opportunity for her abilities and her ambition, Miss Conklin moved to Denver. For a year she substituted in various offices to gain experience. In this way she acquired familiarity with mining, law, railroad, patent and physicians' offices. After this year's work she was ready to become private secretary to the secretary, and later secretary to the general superintendent of the Denver Gas & Electric Light Company. This position she held for several years.

At the time of the war she was just as anxious as the other strongest men and women of the United States to enter the service of the government. She went to Washington and was one of the secretaries to the chief of the Speaking Division of the U. S. Food Administration. For a short time before returning to Denver, she managed the New York office of a Boston boot and shoe exporter.

Denver could not get along without her, however, and after her short sojourn in New York she returned to become Mr. Bare's secretary and learn the hardware business.

Apt tribute to her ability and comment on her standing among the business women of Denver is the fact that she is secretary of the Business and Professional Women's Club, where she is a leader in this worth while work with many of Denver's most prominent and successful commercial women. She is also a member of Denver Civic and Commercial Association.

**Miss Conklin is proud of the boast that Denver is her ome. Wherever a Denver citizen goes you will know it is on he map. This reproduction shows how the Denver jobbers are eaturing their beautiful city as a distributing center, and the ritch Hardware Co. can be depended upon to do more than heir share.**

Digitized by Google

## CHARGING MORE THAN LEGAL INTEREST ON OVERDUE ACCOUNTS

(Copyright by Elton J. Buckley)

During the last month I have received from two different correspondents, located in widely separated sections, inquiries about a roundabout scheme of charging interest on overdue accounts. The scheme is new, and if it is getting circulated about as much as those inquiries would seem to indicate, it may be useful to write something about its legal status.

The scheme is to charge a customer more than legal interest on overdue accounts, by calling the charges something besides interest. One of the inquirers who wrote to me printed on his billheads a statement that on all overdue accounts a monthly charge of 1 per cent per month would be made. The other one printed on his billhead the following:

> Credit is extended with the understanding that after thirty days a service charge of 1 per cent of account will be charged the 1st of each month.

These correspondents want to know if it is legal to make a debtor pay what practically amounts to a penalty for delayed payment of his account. Obviously it would be a fine thing for merchants in general, whether wholesale or retail, if they could legally add 12 per cent a year to delinquent accounts, and collect it. In fact, if the security was good it would pay them to borrow from the bank at 6 per cent and let their customers hold it at 12 per cent, if such a thing could be done.

I am sorry to have to express the opinion, however, that the plan is not legal. No customer in my judgment can be compelled to pay any such percentage, unless he agrees to it in writing, and if the 12 per cent is more than legal interest, which it is in most, if not all, states, the customer cannot be compelled to pay even after he agrees to it in writing. Under no circumstances can such a charge be collected from a customer who has not agreed to it in writing, merely by stating on your billheads that you intend to make it.

The situation involves two questions: 1. Can a merchant collect interest at all on overdue accounts merely by putting a statement to that effect on his billheads; and if so (2), what percentage can he collect?

Unless a merchant clearly notifies his customers that accounts not paid by a certain time will bear interest, or unless the customer has agreed to it, a merchant cannot collect interest at all on his overdue accounts. The reason is this: Fundamentally every merchant who sells net thirty days has a right to interest after the thirty days have passed without payment. And he could collect it if he had never done anything to prevent him, but he has; he has let accounts go over thirty days without claiming interest, and has thus established a custom which he cannot break without notice to his customers. He can always break it at any time he wants to, but he must get clear notice to the customer.

### Print Notice on Billhead

How shall that notice be conveyed? I advised a client recently to print the following on the bottom of his billhead:

> The above account, if not paid by the expiration of the net payment period, will bear interest at the rate of 6 per cent (or whatever the legal rate is) per annum.

After notice is thus given, the creditor can collect interest on accounts that run beyond the net period.

How much can he collect? Never more than the legal rate. That varies with the different states. Some states have two legal rates, as for instance, in Ohio, where the legal rate is 6 per cent, but where the parties can contract in writing to pay as high as 10 per cent. The same thing is true in several other states. In all these, however, the low rate prevails where no written contract has been made to pay the higher. Where collection is to be made merely by printing notice on the billhead, no more than the lower legal rate could be collected, for there would of course be no legal contract to pay the higher.

### No Authority for 1 Per Cent Per Month

I have not examined the interest rate of all the states, but I know that there is no state in which the minimum legal rate is 12 per cent, or 1 per cent a month, and I don't believe there is a state in which the maximum legal rate is 12 per cent. Therefore I can see no way in which a merchant who charges up his monthly 1 per cent as a "service charge" can ever collect it, and even if a customer agreed to pay that much in writing, his agreement could not be enforced, for agreements to pay illegal interest are never enforceable.

The court always looks at the heart of schemes like this, and invariably calls a spade a spade. Thousands of devices have been invented to enable creditors not satisfied with 6 per cent to collect more, and they have been called everything that ingenuity could devise—service charges, fees, bonuses, and what not, but if they after all only represented interest, they are called interest and judged by the interest laws. Twelve per cent on delinquent accounts would really be a penalty for default, which the law will not tolerate.

The correspondents who have written me, and any others who want to experiment, may make their charge and try to get away with it. If they succeed all well and good. I do not advise them to bring suit to recover, however.

The only exception to what I have said, so far as I know, is in the case of certain public service corporations who are permitted to charge what is practically a penalty if bills are not paid on time.

---

Don't ride the high horse. The fall, when it comes, is hard.

Digitized by Google

## USING BOTH "EYES" IN OPTIMISM

There are two kinds of optimists. One believes that "the Lord will provide." The other believes that "the Lord helps him who helps himself." One turns the dark cloud inside out and shows the silver lining. The other not only does this but always keeps that silver lining polished.

One merely looks upon the bright side. The other uses each and every experience as a stepping stone to success. One lets each day take care of itself. The other looks ahead. One floats with the stream. The other strikes out for himself. One is theoretical. The other is practical.

The optimism that we need today and in the coming years is the practical kind; the kind which results in action. Developments made during the war have left the world with greater producing capacity than it has ever had before. If we are to make any permanent reductions in the cost of living we must keep the world producing up to its full capacity.

When it is so easy to sell there is a tendency to become over optimistic, to become impractically optimistic, to act as though this condition was going to last forever. In such a state of mind it is natural to give less attention to the serving and the pleasing of the patrons.

### Make Customers for Hard Times

The practical optimist is now putting forth extra effort to please. He realizes that if patrons are made happy today, they will continue.

In these days there is always a temptation to look at the immediate profits rather than the future ones; to speculate rather than to do business; to build business foundations with sand rather than with the cement of horse sense. The practical optimist makes no such mistakes. He builds solidly for the future.

The practical optimist does all that he can to keep down prices and to keep up demand. He knows that it is only in this way that the production of the world can be sold and the prosperity of business can be continued after the world gets to producing at its full capacity.

### Capitalize Misfortunes

The practical optimist capitalizes misfortunes. A great inventor awoke one night to find his plant in flames. He did not despair. He studied the action of the smoke and the flames and learned something from them that enabled him to perfect an invention, the returns on which more than paid for his loss. He capitalized his misfortunes.

A man started a new kind of store. He failed. He tried again and failed. He tried the third time and failed. He studied the cause of each failure, used the knowledge he gained in this way and started a fourth time. When he died, he left a fortune of many millions. He was a practical optimist. He capitalized his misfortunes.

While Charles Goodyear was experimenting with rubber he was forced into bankruptcy. But he did not give up. He kept right on working. He learned something from each mistake and each accident. He followed each new clue. He finally solved the problem of vulcanizing rubber and not only paid his creditors $35,000 but laid the foundation of the great rubber industry and made the modern automobile possible. Goodyear was a practical optimist. He capitalized his misfortunes.

The main difference between the man who makes a great success in business and the one who fails is that one is a practical optimist and the other is not. One learns from his mistakes. One capitalizes his misfortunes. The other may despair.

During the changing business conditions, in these days when we cannot tell what the conditions will be tomorrow, practical optimism is the only thing that will carry a man on to success. All of our optimism, today, must be strongly flavored with common sense. It must be practical.

### Don't Wait for Production

There are those who would have us stand and wait until production catches up with demand. The practical optimist nurses along demand so that it will keep pace with production.

If we don't nurse along demand, if we don't keep it in a convalescent condition, it may have a relapse and die and then what are we going to do when production becomes normal, when the increased producing capacity of the world is operating in all its magnitude? The practical optimist says that we must not let demand die, that we must not stand still and wait, but that we must begin now to cultivate the business that we are going to be able to handle in the future.

The practical optimist realizes that the more we produce, the more we have, and that we can't produce any more than we can sell. He knows that the present state of civilization is due to increased production which has been stimulated by constantly increasing selling efforts.

The practical optimist knows that former business depressions have been due to standing still and waiting when people were buying more than could be produced. He is going to guard against another business catastrophe by using as great an effort to sell, not only the goods of today, but the goods which will be produced tomorrow, as he would use if he was already stocked with more goods than he could sell.

This is no time to stand still. It is time to go ahead. The practical optimist knows this. History tells him it is true.

# Advertising Hints for the Retailer

ADVERTISING is the sunshine of business; and most businesses thrive a great deal more in the sunshine than under the leaden skies of modest obscurity.

Advertising is printed salesmanship.

It is telling people what you've got; and why it is an advantage for them to consider carefully the articles you offer.

Most of all, it invites and induces them to come to your store, to trade, now.

Remember that the customer isn't buying a washing machine, a kitchen range, a vacuum cleaner or a set of garden tools to please you, or for the express purpose of giving you the profit.

He is doing so because he sees it for his own advantage.

When you have shown him that advantage, and have proved the quality and fairness of price, he is sold in his mind at least, and the only thing that will prevent a purchase is his financial inability.

Perhaps you can even show him the expenditure is an investment which will pay for itself and yield returns.

In that case, he may even see it to his advantage to borrow the money; or to purchase of you and pay in a negotiable note.

If your advertising is to count, it must have the following characteristics:

### The Twelve Fundamentals

1. It must be attractive to the eye and easy to read.

2. It must not be stilted or cut and dried, but so direct and convincing that it will interest—just as you would talk it.

The best reading is a simple style—not "full of fine words which are as applicable to hosiery, tires or motor cars."

3. It must be definite in its appeal. Advertising aimed at everybody, hits nobody. Think of some type of person and shoot it at him, as straight as you can say it.

4. It must show the advantages and desirability of possession, to them—not only why you want to get rid of it.

5. It must be "followed-up" intelligently, by phone, letter, personal persuasion, etc., when possible buyers come to the store.

6. The advertising itself must be consistent, persistent and constantly changed in text.

7. If possible, contract for the same newspaper space and bargain for a desirable location.

8. Prepare your advertising well in advance.

9. Require proof to be brought to you for correction.

10. Never make claims or statements that you do not make good and cannot support by argument or test. Don't challenge your reader's common sense by empty claims that everybody else makes, nor by "pretty," high sounding words.

11. Connect your window displays with your printed advertising.

12. Make your advertising timely.

### Attractive and Natural

Advertising which is set in too small type or mentions too many articles, is difficult to read and repels at first glance.

A good test of an advertisement which pulls is: Can you look at it and read all the headlines or leaders easily and quickly?

If you can't, boil it down—and cut out any "big words" which you or no one else commonly uses.

All capital letters are difficult to read, and many changes in style of type may look nice but are not effective in the reader's mind.

Say what you've got to say in the most direct way, as though you were looking straight into the face of a customer.

Be natural. Study successful advertisements in order to discover how their publicity differs from yours.

### Appeal and Advantages

Some hardware men make the mistake of thinking that an advertisement should interest a majority of the paper's readers. This is seldom the case.

If you are advertising lawnmowers, you will not expect to interest the minors and society young misses.

If you are talking about fine scissors and shears, your appeal will be to women and business people who have occasion to use them.

If you are selling portable grain bins, the people who do not farm and have no such interests, will not pay much attention.

The point of all this is, advertising which is too broad is like bird shot discharged aimlessly into the air.

It doesn't make a big killing. Before you prepare your advertisement decide on the class of people to whom those articles should appeal and talk to such a one on paper.

Show them why the articles are desirable from their standpoint—offering more in durability, efficiency, economy, convenience, better work, more utility, saving time or effort.

Imagine that you are one of these customers. What would you want? How would the price strike you?

Always try to quote a price in the paper rather than ask customers to call for estimates or prices.

In short, leave every reader of your advertisement whom you can reasonably expect to do so, enthused and interested, and anticipate all reasonable questions he might ask.

### Advertising Follow-Ups

The other day a hardware man advertised an electric washing machine. He urged its advantages and every day changed his advertisement

Digitized by Google

enough, so that the people who had read once would keep on reading.

Then he sent a representative from his store to call on likely prospects, explaining that the offer was a limited one and that he wanted to tell them and give them a chance to get in. A carload of washers was sold.

The man who advertises, using a half page or a page space once in a while and then stops until he is ready for another flash in the pan, doesn't get the best results. Use a little space, if need be, regularly. Contract for this and plan for it.

**Space and Layout**

Take a good-sized sheet of wrapping paper. Write out your advertisement with pen and ink or lead pencil, just as you want it to look when it will be set up.

Make it four or five times as big as your advertisement will need to be.

Give it thought and care.

Weigh its appearance and selling advantages, then indicate to your printer how many columns wide and how many inches deep, you want it to run.

Don't forget a few cuts—not too many, but a good one now and again, thoroughly to the point.

Take this layout to the printer in plenty of time. Copy rushed in at the last minute is hurriedly and poorly set up, and has the least desirable space.

Your own space on the editorial or personal page is worth a great deal, as you educate people to look for, to discover, what new and interesting things you have to say.

**Proof and Reliability**

Call for the proof of your copy and correct it. Some mighty careful copy has been made utterly ridiculous by a misspelled word or a misplaced cut.

Only the other day a druggist's ad of a spring tonic had a cut with it showing a girl fainting or having a fit with her head bound up, and the words under it, "Run for the doctor."

Evidently the tonic had not agreed with her.

**You are paying good money for your advertising and it should bring results, but see to it that the preparations are properly made.**

It is a mistake to over-state values. Let the goods be a little better than your claim.

A store which disappoints once has shaken confidence.

Establish a reputation for never misrepresenting or misleading, so that when people see your publicity they can say, "We can depend upon what Jones says. We'd better go down and get one of those things!"

**To destroy the confidence, you are spending good money to build up, is as stupid as to take a knife and sever the life line which the man in the boat has thrown to the despairing swimmer.**

**Seasonable and Co-Related Advertising**

Naturally the articles advertised must be those which should occupy the attention at the time, of interested people.

That does not mean, however, that gardening tools should not be featured until just when the first warm day comes and they are wanted.

The dry goods man holds his blanket sales in mid-summer and his white goods sales after Christmas, urging early buying while the stock is complete.

**The obvious moral is, begin the advertising early enough to get people thinking about their own needs, in the articles which you have to sell.**

Window displays can be and should be your strongest means of advertising. People are on the spot and will usually pause long enough to look in and see what is exhibited. If the newspaper publicity talks of the same things which the window shows, emphasis is given to the lines featured. People going by the window say to themselves:

"Why, yes, I read of those lawn-mowers in the paper last night! Guess I'll take a look at them," or, "There are the sanitary garbage cans mother was reading about in Brown's advertisement. Reckon I'd better go in and get one now."

The window display strengthens the newspaper talk, and the newspaper advertising strengthens the window display. Drive them as a well-matched team, making each pull for the other.

There is nothing mysterious about preparing good, straight-from-the-shoulder, result-producing advertising, if one will say, on Tuesday morning each week, "That is my first job"; and observe the necessary steps.

**Once your advertisement has appeared in print, study it and determine in your own mind just where and how you might have improved it.**

Formulate that "where" and "how" in two or three brief sentences.

Paste the clipped advertisement in a book kept for the purpose.

Head the clipping with the date and the name of the newspaper in which it appeared.

Add your own criticisms as a footnote, in the results observed within the ensuing week.

**The next time you prepare an ad, profit by your experience and thought.**

Such a book of clipped advertisements will prove very valuable to refer to from year to year—not only valuable, but interesting.

## SUGGESTION FOR A ROPE SALES WINDOW

Here is an unusual display of rope that our sales window expert thinks could be utilized by merchants in their rope displays—one that will be sure to attract attention. We are indebted to the Columbian Rope Co. for this reproduction, showing the various knots used by mechanics generally. Any bright young man can easily duplicate these knots and incorporate them into a sales window of cordage products. Windows that are attractive as well as show the various uses of merchandise are very sure to prove good trade bringers.

## THE EVILS OF GOVERNMENT OWNERSHIP

One of our Illinois subscriber associate editors contributes this.

There are 1001 reasons against government ownership with its resultant strangulation of individual or national development. Here are 27 of them:

Government ownership
Discourages initiative,
Promotes autocracy,
Retards development,
Breeds paternalism,
Builds political machines,
Confiscates property,
Destroys efficiency,
Extends governmental espionage,
Perpetuates bureaucracy,
Incites bolshevism,
Creates class distinctions,
Encourages official insolence,
Impairs communication,
Delays transportation,
Makes people dependents,
Rewards incompetency,
Eliminates competition,
Creates monopolies,
Establishes wage inequalities,
Debauches the electorate,
Entices people from farms,
Discriminates against private enterprise,
Imposes high taxes,
Increases rates,
Diminishes service,
Spreads dry rot,
Provokes profanity.

"Knock and it shall be opened" doesn't apply to "knockers."

**How** few of us give thought to tact—consideration of others. It is the greatest aid to success. We doubt if success can be achieved without tact. Give the other fellow the benefit of the doubt. Do not hurt his pride; he may be sensitive and crawl into his shell and be done with you.

## WHAT A GOOD FELLOW REALLY IS

(By H. R. Isherwood)

Beauty that is only skin deep finds its parallel in the good fellowship that is only superficial.

The "good fellows" we hail from day to day, the chaps who share our cars, lunches and cigars, may after all beat their wives or starve their children.

Real good fellowship is Sincerity of Heart, Integrity of Mind, Appreciation of the Rights of Others, and Loyalty to Organization.

Many men are corking good fellows up to the point where they are called on to do their part in support of the organizations in which they hold membership. The reasons for maintaining an organization are usually just as valid as the years pass as were the reasons for joining in the first place.

The purposes of organizations are to foster good fellowship, to promote mutual understanding of ideas and aims, to insure the general prosperity of those represented, and in some instances, to provide definite benefits to members' dependents.

These are worthy purposes and, in any analysis, are of great importance.

No organization can exist unless the dues which maintain it are paid promptly. Why not pay them cheerfully? It will not do at all to let part of the membership pay and the rest do nothing. It is not fair, it's rotten. The amount of the dues is trivial as compared with the advantages provided; such dues should be paid without reluctance or procrastination.

The good fellow who is really a good fellow meets such obligations gladly because he feels not only that he is receiving value in full but also that it is unfair and subversive of good fellowship not to pay along with the rest of the members.

If there is honor among thieves, how much more should there be in the highest reciprocal relation between the members of organizations composed of gentlemen—and a gentleman is not a gentleman unless he is really a good fellow, in truth.

Business is as much a game as golf or baseball or football.

## WORLDY WISDOM

Bessie was the dearest little dog, and her mistress was passionately fond of her. One day the little girl was told by her mother that she must not see Bessie for two or three days, and then, when at the end of the time she found her dog, it was with five puppies.

"Why, Bessie," said the little mistress as the little dog leaped into her arms, "why you dear little doggie, I didn't know you were married!"

# Big Ideas in a Small Town

(By John J. Commons, Traveling Salesman)

I DIDN'T sell my man. The reason was this: A competitor with a line almost as good as mine, beat me to the business and I was feeling just a little bit grouchy and rather pessimistic. It was one of those towns on a branch line where they have "two a day, one each way," and I had to sit in the little hotel lobby and fight flies for several hours before I could get back.

Now, if there is one form of indoor sport that I don't especially care for, it is fly-swatting when I am the center of attraction. So to escape the flies, the heat and the odor from the dining room, I strolled out into the street.

### Sizing Up the Town

It was a town with one big hardware store, one small one, two or three groceries and a general merchandise store that carried an unusually large stock of goods for a town of two thousand. I browsed around a while, asking first one town character and then another the question I am always asking relative to the activities of merchants, and of things in general that are of interest to me.

The general merchandise store was of unusual size, so I strolled in, met the proprietor, explained that I did not want to take up any of his time, but was interested in seeing what was going on—naturally complimented him on his neatly trimmed show windows, clean, well arranged stock and general air of prosperity.

"Make yourself right at home—very busy myself today; but ask the clerks anything you want to know and they will tell you."

"Thanks. With your permission, I will just satisfy my curiosity for observing the work of retail clerks."

### Called Customers by Name

A woman, obviously from the rural districts, entered. The young lady in the dry goods section called her by name and the cordiality of her voice and the sincerity of her smile undoubtedly made the lady feel she was welcome. There was no time lost in learning what she wanted, which seemed to be only a square yard of brown canvas to fix up an incubator tray.

### Offers Suggestions

"While you are here, Mrs. Brown, I want to show you some new patterns in gingham—just came in," and with that the young lady began spreading before the prospective customer pattern after pattern of gingham, and the prospect very plainly was impressed. After showing several patterns and getting the prospect to commit herself to the attractiveness and quality of the goods being shown, the young lady said:

"Ginghams like these are always staple—it is a good idea to have a few yards in the house —they make such nice dresses for the children! Now, Mrs. Brown, just as a matter of advice or suggestion, maybe you would like to have me cut off a pattern or two of these nicest pieces so you could have them around the house when you need them."

### Sold Her Four Patterns

The suggestion must have been a good one, because Mrs. Brown decided to take four patterns instead of "one or two." I saw a ten-dollar bill change hands and Mrs. Brown did not get back much change! **All of which goes to show that sales are sometimes made to people who do not enter the store to buy.**

One thing that impressed me in that store was the large number of attractive display cards that had been given prominence and the clerks apparently had been coached on the advantage of conserving their time, of making the sale easier by showing standard advertised brands and suggesting their purchase as an insurance of quality and as a guarantee of correct price.

### Reasons for Pushing Advertised Brands

Before I left that store I learned a new reason for handling trade-marked advertised lines. As I have said, the boss was a busy man —he was here, there and everywhere—there was nothing of fluster nor irritability about him. He was just plain busy, but never too busy to smile, pass the time of day, to answer the question of an inquiring clerk and to do the thousand and one things that would naturally be a part of the day's work for the owner of such a busy store in a farming community. But I did manage to get a word in edgewise, so I asked him to tell me if he would, why he featured so many standard brands.

"You may think it's funny and maybe not good policy; but a few years ago I discovered that I was spending a lot of my time and that my clerks were spending a lot of their time, and of course of my money, trying to sell goods that people didn't know anything about. I had a sort of hazy idea that I was too busy to help a manufacturer sell goods that were not worth advertising—by the manufacturer himself.

### Merchant Figured It All Out

"So I began putting in standard brands as the other kind moved out and in just a little while I had a lot of merchandise that was half sold when it went on the shelves, simply because the manufacturer had told the people through newspapers and magazines just what I was spending good money to tell them every day in the year.

### A Way of Saying It

"We have originated a little phrase here in the store that all of us use—say it in just the

Digitized by Google

right way and the sale is cinched nine times out of ten, and quickly: 'This is the so-and-so brand—of course you know without being told what that means.' Let a clerk say that to a prospective customer in just the right tone of voice and with proper inflection and facial expression and it is just about all over except punching the cash register button."

The hour I spent in that country store taught me that all good ideas are not confined in the city skyscrapers. And when I had a little chat with the advertising manager next trip in I told him that at least one of the boys on the road would be a stronger booster for his game in the future.

That country store-keeper who taught his clerks to sell goods that were not actually called for or demanded and to save their time by pushing standard lines was an inspiration—and a valuable one, too!

**Merchant's Reputation Grows as Quality of His Goods Grow**

Not being experienced in the art of weaving flowers of rhetoric into the phrases of elegance, I have been unable satisfactorily to express a certain thought that keeps bobbing up from time to time, to the effect that "a man is known by the company he keeps"—I'd like to paraphrase that old line from the copy books of youth to convey the thought that **the reputation of a merchant grows right along with the reputation of the lines he handles.**

Maybe you will get the idea—maybe you've already worked it out in your own mind. I hope you have.

---

We must settle down to real work, no question about that. The workers will win, the drones will be killed off. It is the law of the hive, and anybody who doesn't look upon business as a bee-hive is lacking in imagination. Many get stung; service alone justifies existence; the honey is sweet while it is being accumulated, and then most of it, and sometimes all, is taken away at the end of the season. Verily, brothers, it is a great life if you don't weaken!

---

## SLIGHTLY MIXED

"I'm in a hurry," he said, rushing into the hardware store. "Just got time to catch a train. Give me a corn-popper, quick!" "All right, sir," replied the clerk. "Do you want a large pon-corner?" "No, just a medium sized—an ordinary porn-copper!" "How will this copponer do?" "Is that a pon-corper?" "Yes, but you're getting twisted. You mean a con-porper—no, a pern-copper! No, a—" "I mean a conporper!" "Oh, yes, a pon-corper!" "Yes, be quick! Gimme a pup-conner, and be quick!" "All right! Here's your pun-cooper."

---

Carelessness and failure are twins.

## THE STUMBLING BLOCK

(By Berton Braley)

I'm the scorn of minds sulphitic of the esoteric critic
Of the little group that calls itself "Elect."
Parlor Bolsheviks ignore me and the doctrinaires all score me
For the dogmas and the schemes that I have wrecked.
Long-haired orators attack me with the thought that they can hack me
Into pieces they are certain won't be missed,
While some proudly abstract thinkers put on philosophic blinkers
Which prevent them from observing I exist.

I am dull and unromantic and the theorists grow frantic
When they find they cannot conjure me away;
I'm the block on which they stumble, I'm the thing that makes a jumble
Out of all the airy visions they display.
Though the lights of hope may beckon I'm a thing that they must reckon
Or their science and their skill will not avail,
And their ships so proudly steaming to a port of which they're dreaming
Will be thrown in wreck upon me as they sail.

I am stubborn, heavy, leaden and the thought of me may deaden
Many notions that are glorious and fair,
I'm a bore, I can't deny it, and I wouldn't even try it—
I am solid, vulgar, tiresome, but I'm there!
You can sneer and you can flout me, but you can't get on without me,
Though you suffer with convictions most intense.
For your plan won't last a minute if you haven't got me in it—
I am nothing more or less than Common Sense!

---

To clothe our thoughts in others' words
May ofttimes save us labor,
But let us not forget to give
Due credit to our neighbor.
Lest, when we spill some brilliant quip,
Have set it down, or said it,
It's point is blunted when we find
That somewhere else we've read it.

Reflecting thus as I discuss
My breakfast paper mush,
I scan the host of scribes so caught
By plagiaristic rush.
But rather thus would I offend
And brave each doubting Thomas,
Than throw the gaff and save my face
Behind inverted commas.

Digitized by Google

# Displays That Lead To Sales

The good salesman is the man who directs the thoughts of the man or the woman to whom he is trying to make a sale. He talks in such a way and shows his goods or his samples in such a way that the prospective purchaser's thoughts are just naturally led right up to the buying point.

In the case of all people it is the things that they hear or see that has very much to do with what they think about. If the same idea is presented to us in many different ways we begin to believe that the idea is true. We may not reason this out but we naturally come to the conclusion that it is so.

It is for this reason that when all sales effort, advertising, personal selling and window displays are working together, the sales become much larger. The combined effort serves to keep more people thinking more consecutively along the line of making purchases. There is not so much to cause their minds to wander.

### Building on a Central Idea

If in addition to this concentration we can also tie the thoughts up to some central idea upon which everyone can agree then we have still greater force given to our selling effort. Community Clean-up Weeks, and the like give such an opportunity, but it is not necessary to wait for some community week or any other week for that matter in order to find some central idea.

The grouping of the complete set of tools required to do any particular kind of work that people are likely to be doing at the time, the grouping of material that is needed for doing the sort of work that should be done, the gathering together of all the material and tools needed for doing any particular kind of work or job gives the basis of an excellent selling idea.

It is always easy to forget certain items if we do not have a complete printed list. For this reason the advertising and display which serves the purpose of a complete printed or written list is bound to sell more goods than one which merely mentioned one item or a few disconnected items.

One causes logical concentrated thinking and the other scattered and unconnected thinking. The result is purchases in one case and perhaps in the other failure to purchase what the person actually started out to purchase.

Everyone knows that a new idea is often able to drive an old one out of the mind and possibly postpone indefinitely the action that was suggested by the old idea.

### Making Displays Complete and Harmonious

Displays, both in the window and in the store, should always be the illustrations that go with all the other effort to sell goods. When they are looked upon in this light they are going to sell goods. When they are looked upon merely as a convenient storing of goods, they will not sell very many goods.

If a household work shop is advertised in the papers it should be displayed in the window. The complete shop should be shown already to use. In addition it will be well to show some of the things that can be done at home with a shop of this kind. Show some of the things that have actually been done with a similar set of tools and equipment in local homes by local men or boys and give the names and addresses of these men and boys if possible. This will create a considerable greater desire to possess the whole outfit than would be created if this added touch of things that have actually been made with such tools were not added. In some cases it may be necessary to show the tools and equipment in one window and the things that have been made in another.

Such a display as this usually serves two purposes. The people who have made the things displayed feel flattered to have their handiwork given so much publicity and they, therefore, naturally feel more friendly to the store that makes the display. The people who see the display receive suggestions of the value of the equipment displayed and have a greater desire to buy. They may even want to buy to find out if they can't make something better than the other people have.

### Tieing Up With National Advertising

The selling value of the display can still further be increased by making use of the national advertising that the manufacturers have done. These advertisements may be clipped from the magazines themselves, or proofs of the advertisements may be secured from the manufacturers. Each advertisement should be mounted upon white cardboard. The number of advertisements used will depend to a considerable extent upon the advertising that is being done by the manufacturers of the goods displayed and upon the number of advertised brands that are placed in the window.

These cards bearing the national advertising should be placed quite close to the window. If proofs are secured with no printing on the back, the paper proofs themselves may be pasted directly to the glass. This, however, cannot be done with advertisements that have been clipped from the magazines unless they are mounted upon cards or paper thick enough so that the printing on the back of the page will not show through.

From each advertisement run a ribbon or paper streamer to the article displayed that it advertises. No comment will be needed. The advertisements and the goods make the connection in the onlookers' mind that may be nec-

Digitized by Google

essary to cause a decision. In such a window display as this the only cards not made from the manufacturer's magazine advertising is a card to bring out the main idea and of course the cards telling about the home made articles that are displayed.

Such displays as this can be used to help sell kits of carpenters' tools, and work benches for home use, kits of machinists' tools and little machine tools for home use, small kits of tools for any special use, garden tools (in this case the articles suggested will be replaced by garden products), soldering kits, and a great many other things carried in stock.

**Clinch Windows With Display Inside**

There are a number of ways that the appeal can be made. The tools can be featured as something which when used cut down the cost of living and at the same time furnish much needed exercise. They may be made to appeal especially to boys and to the fathers of boys for boy use. They may be made to take advantage of the greatest appeal that is at the time attracting the attention of the people, just as the necessity of feeding the world was made the special appeal for the war garden during the war.

It will be a mistake after going this far, however, not to go a little farther. If after seeing a display of this kind there is nothing to follow it up and strengthen it inside the store, a good many people who enter with their minds about half made up to buy may change them or have their attention attracted to something else as soon as they enter the store.

For this reason there should be a display similar in nature on the floor of the store. This, of course, need not be just like the one in the window, but it should carry out the same general idea. It should be designed to make the person who has entered the store want the goods shown a little more than he did before he entered. It should be so arranged as to make it just as easy as possible for the customer to ask about it and make up his mind to buy.

**Organized Effort to a Single End**

This store display will be most effective if it is placed near the door where it will be seen as the person enters and where it will be the first thing that will be seen. In order to make the largest possible number of sales, every person who sells goods knows that he must close one sale before he starts on another. If he keeps jumping from one thing to another he may cover a much larger variety of articles but he has failed to make any sales.

In the window display we have tied up the goods with the national advertising in order to secure the full power of that advertising, in order to bring back to the people who see the display the idea of possession that entered the mind when that advertisement or those advertisements were read. This will aid in getting the person thinking along the right line.

To carry out the plan of selling still further it will be necessary to have the first thing that the person sees as he enters the store help add to the desire to buy. Hence the display just inside the store. If we have someone near the display to make sales and answer questions, the

Here is an effective display of the Keen Kutter line, recently made by the Neal & Gregg Hardware Co., at Glendale. The window has the merit of neatness, precision and all-around attack upon the weaknesses of every passer-by who is interested in tools. Merchants will find that manufacturers and jobbers throughout the country are more than ready to cooperate with the retail trade in these cooperative displays.

Digitized by Google

last link is placed and the sales will be sure to mount much higher than they would if there had been anything to run the train of thought set up by the window off the track of purchase making.

A great deal of the success connected with displaying goods depends upon keeping the buying trains of thought on the right tracks until the purchases are actually made. It is easy to mix them up, it is easy to run the thought trains into the ditch. When the necessity of keeping the same idea uppermost until the cash is in the cash register is borne in mind, however, it becomes very much easier.

## GOT HIS SCRIPTURE MIXED

A Georgia HARDWARE WORLD subscriber contributes this:

A dark-complected parson, being invited to preach a sample sermon to the Quarterly Conference to show his knowledge of the Bible, before receiving license to sky-pilot a southern flock, addressed his hearers as follows:

Once upon a time a man went down frum Jerusalem to Jericho, an' he fell among thieves, an' thu thorns growed up an' choked dat man, an' he went on and didn't have no money, an' he met de Queen of Sheba, an' she giv him a thousan' talents of gold an' a hundred changes of raiments. An' he got in thu chariot and drove furiously. An' when he wus drivin' along under a big tree, his hair got caught in a lim' an' left him hangin' dar. Yes, suh! An' he hung far forty days and forty nights an' thu ravens brought him food to eat an' water to drink. Tn' one night while he was hangin' dar asleep, his wife, Delilah, come along an' cut off his hair, an' he fell on stony ground, and it began to rain, an' hit rained forty days and forty nights, an' he hid hisself in a cave. An' he went on an' he met a man who told him "Come in, an' take supper wid me." But he said, "No suh, I won't. I done married a wife an' I cain't come." An' the man followed him in thu highways an' the byways an' compel him to come in an' have supper wid him. And he rose up and went on to Jerusalem, an' he seed Queen Jezebel sittin' high up in de window, an' she laughed at him, an' he say, "Throw her down out of thar," an' they throwed her down. And he sez, "Throw her down some more," an' they throwed her down seventy times seven, an' of thu fragments they picked up twelve basketfuls. Now, whose wife do you reckon she will be in the day of Judgment?

---

The Society for the Annihilation of Profiteers, we understand, has memorialized congress for the passage of a bill authorizing a change in the spelling of the word "apparel," viz: "abarrel."

---

Principles pay the best interest.

## A STUNT FOR SPECIAL SIZE BOLTS

Several dealers who carry a stock of round iron in bars are doing a thriving business in "made-to-measure" bolts.

Of course, it is impractical for a dealer to carry a stock of large bolts in every size that the public wants and calls for.

Consider the many uses for the abnormal bolt:

Tie and truss—rods for buildings.

Stud bolts for concrete construction.

Long bolts for mounting fire door hardware.

Mounting shafting and installing machinery —and scores of other uses in every locality.

There are very few dealers in heavy hardware but who have heard a dialogue something like this, spoken in their own stores: "Can you give me 50 ¾" x 30" machine bolts?" "No, but I can order them; ¾" x 18" is the longest we carry." "Can't wait for shipment by freight, and express would make those bolts cost——?"

Nine chances to one the customer goes out and has his bolts threaded from bar stock by some small machine shop or blacksmith.

Here is a way to give your customers service and enlarge your bolt business.

Get a bolt butter and install it near your stock of round iron and you can make bolts. How long? Limited only by the bar length of stock. What diameter? Limited by capacity of machine you procure.

There are many rush jobs in every locality. Contracts to be finished by a given date or a forfeit paid. New equipment to be installed in manufacturing plants in the week-end shut down. Customers are willing to pay for service and pay well, if they can procure just what they want when it is needed.

A threading machine or bolt cutter is a simple, self contained machine and can be operated by practically anyone with a little practice.

How is a special bolt made on a bolt cutter?

1. Cut off the stock the desired length.
2. Cut a thread on each end of the rod.
3. Screw a tapped nut on each end of the rod. Carry a stock of standard size tapped nuts on hand and also a stock of blank nuts that can be tapped to any size up to 2-inch.

That's all you have to do, except, tell your world that you are equipped to furnish them with "Bolts and Service."

Simple, isn't it? —Helix.

---

## REEG THE RHYMER'S PLANE TRUTHS

I would say to the hardware dealers:

Give ad-VICE when needed, but don't tell AWL you know. TRY and be on the LEVEL and SQUARE in AWL your dealings.

---

The way to carry a stiff load is to have a stiff upper lip.

# Stanley Works Western Representatives

WHEN the Stanley Works purchased the Stanley Rule & Level Co. last spring and formed one great Stanley organization, the trade well knew the results would be far-reaching and that the Stanley name and Stanley Works were destined to ever-increasing importance in the hardware field.

Thus the announcement that after the first of the year the Stanley Works will maintain their own selling organization in the far West, although of distinct interest is by no means unexpected. As a matter of fact, the reorganization of the far western sales arrangements by the Stanley Works is a step made practically necessary by the tremendous increase in the volume of sales to be handled and in the demands upon the sales representatives.

### No Change in Sales Policy

R. N. Peck, vice president of the Stanley Works, has emphatically stated that the only change in the sales policy of the company will be that they will have their own direct representatives in the West who will represent no other line. Otherwise no other changes in their relations with the trade will be made.

section of the country and all over the world, nevertheless there has never been any change made in the western sales arrangement, Mr. Rowntree having been the only manufacturers' agent in tne United States to represent the Stanley Works.

With the consolidation, however, and the additional lines of rules, levels, planes, bit braces and hammers manufactured by the Stanley Rule & Level Division, it was thought advisable to have their own sales organization.

### Representatives Are Veterans

In planning the new organization to handle the territory from Denver and El Paso west, out of the goodness of his heart and the wealth of his associates, Mr. Rowntree has turned over to the Stanley Works two of his very ablest lieutenants, L. M. Knouse of the San Francisco office, and Bruce Findlay, Seattle representative. Beginning the first of the year, Mr. Knouse will represent the Stanley Works in Los Angeles and Mr. Findlay will handle the Northwest.

At the San Francisco office will be S. V. Armstrong, the kindly, efficient friend of the western hardware

Straightforward in all business and social relations, L. M. Knouse typifies those things which should be the ideal of every American business man. He generously gives "Uncle John" (as he is affectionately known by the Rowntree organization) a large share of credit for the methods on which he has built a sterling business career.

Bruce Findlay is another member of the Rowntree organization who helped to develop the Stanley Works trade in the West and who will hereafter devote himself to their products exclusively, maintaining the same trade policy that has won the confidence of the buyers and merchants. He adds much strength to the organization.

"Sam" Armstrong as the trade affectionately calls him. His name is a synonym for all that goes to make a true, fine and honorable business man, and we use those words in the most comprehensive manner. We have yet to hear of anyone, buyer or competitor, making a disparaging remark about him.

It is but natural that arrangement should be made to carry on the new organization through men who know the problems of distribution, and who are thoroughly familiar with the territory, and tried and true in representing Stanley products. It is further natural that these men and their principals, who have been so happy, so highly respected in their business dealings and their trade relations up to this time should maintain the same standards of practice and the same policies that have characterized them in the past.

For 31 years John T. Rowntree and his sales organization have ably represented the Stanley Works in the West. So efficient and so sufficient has been the Rowntree organization that although the Stanley Works have their own sales representatives in every other trade who has hitherto so notably represented the Stanley Rule & Level Co.

Each one of these men is a veteran in the hardware trade, each having worked up to his present position by his own efforts through long years of experience in both the retail and wholesale trade. If we were to name a hall of fame to include the outstanding personalities in the western trade, we could not afford to omit either of these three. They are thoroughly representative of the highest type, admired, respected, looked-up-to by those with whom they do business, by their competitors and by their fellow men in every walk of life.

These three watchers and workers on the western frontier will have a huge organization behind them

Digitized by Google

which will be growing constantly, whose greatest problem will be in distribution, to increase volume and decrease costs. The Stanley Works is now a $15,000,000 corporation embracing within its organization 21 manufacturing plants and putting on the market a complete line of carpenters' and other tools as well as wrought steel builders' hardware.

L. M. Knouse decided on the hardware business as a career when a boy in Indiana. Realizing that nothing or no one can grow without room, he went to Chicago as a clerk in a retail hardware store and later as order clerk with the old jobbing and manufacturing house of C. Sidney Shepard & Co. Promoted through various positions, he became manager of their Denver branch house. Seventeen years ago, John T. Rowntree paid him the compliment that he has paid to so many other outstanding young men of the trade by asking him to become a member of his organization. He managed their offices successfully at Denver, Portland and San Francisco in his years of service.

Bruce Findlay was a Canadian by birth and had his early training in the retail hardware business in Vancouver, B. C., where he was an employe and later proprietor of a retail store. Moving to Seattle he was for a while a jobber's salesman. Seven years ago Mr. Findlay joined the Rowntree organization and took charge of the Seattle office, where he has ably conducted himself and the affairs in his charge.

S. V. Armstrong, native to Knoxville, Tennessee, traveled through the South for Sargent & Co., and finally moving west operated a retail business in San Francisco for some time. Later, joining the sales force of the Stanley Rule & Level Co., he made his home in New Britain. The lure of the West and his warm friendships took him back to San Francisco, where he has represented the Stanley Rule & Level Co. for a number of years, covering the western territory.

Although there are these changes in name and position, the trade will understand there will be no change in personality or in the spirit of the business relationship or the trade policies that have characterized the affairs of the John T. Rowntree organization, the Stanley Rule & Level Co., and the Stanley Works up to this time.

## HE IS JUST AWAY

I cannot say and I will not say
That he is dead, he is just away,

With a cheery smile and a wave of the hand
He has wandered into an unknown land

And left us dreaming how very fair
It needs must be, since he lingers there.

And you, oh you, who the wildest yearn
For the oldtime step and glad return,

Think of his faring on as dear
In the love of there as the love of here,

And loyal still as he gave the blows
Of his warrior strength to his country's foes.

Mild and gentle as he was brave
With the sweetest love of his life he gave

To simple things. Where the voilets grew,
Pure as the eyes they were likened to,

The touches of his hands have strayed
As reverently as his lips have prayed,

When the little brown tnrush that harshly chirred
Was as dear to him as the mocking bird

And pitied as much as a man in pain,
A writhing honey bee wet with rain.

Think of him still as the same, I say;
He is not dead, he is just away.

—James Whitcomb Riley.

## SUCCESS DEPENDS UPON WISE CHOOSING

All success in life, all business success depends upon wise choosing.

Failure is the result of choosing unwisely.

Life is one continuous series of choosings, decisions.

When we start going to school we have to choose whether we shall apply ourselves diligently to our studies or dodge them.

When we start work we have to choose whether we shall make it our first consideration and apply our whole selves to it, or whether we shall treat it as secondary to having a "good time."

In our youth we have to choose between giving rein to our appetites or keeping them under control.

Every human being is early confronted with the problem of choosing what line, or mode, of life to adopt.

Does it not seem to you, on reflection, that the reason why we make so many poor choices is that we do not attach adequate importance to each choice we make?

Do we not often tell ourselves that it is entirely unimportant whether we choose one course or another?

Life can be likened to a mosaic. Each particle is small, but whether the whole mosaic is a masterpiece or a hideous monstrosity or merely mediocre depends upon whether its builder chose each particle wisely or unwisely.

You and I are mosaic workers.

Each day we have to choose a certain number of particles to be fitted into the framework of our lives.

Although we may not fully realize it, the beauty or the ugliness of the product depends on the choice we daily make of the kind of particles we use.

Our choices are actuated by what we are, by what we have stored in our heads, by what we have in our hearts, by how we have disciplined our bodies, by how we have shaped our ambitions.

Our choices, in short, reflect ourselves.

To make right choices we must strive to make ourselves right.

—Forbes Magazine.

# Denver as a Jobbing Center

(By Frank A Bare, President Tritch Hardware Co. and Chairman of the Jobbers' Bureau, Denver Civic and Commercial Association)

GEOGRAPHICAL and economic conditions invariably tend to produce in a given area one large jobbing center. In the Rocky Mountain region this jobbing center is Denver. The territory covered by Denver jobbers presents this outstanding feature—it is partially developed country. Because of this fact the relation of jobber and dealer is one of steady cooperation based upon mutual personal interest.

The retail merchant is engaged in building up a community, and the jobber is pledged to aid him in every possible way. Their objects must be mutual and their efforts must be made in a cooperative way. It must be team-work. The first business of the jobber, therefore, is to thoroughly and carefully study the economic and industrial conditions of this rapidly developing territory which he serves. It is then his further duty to stock, and keep a complete assortment of the merchandise that will fully meet the needs and requirements of all the local conditions.

### Have Cooperative Spirit

Because of their pride and mutual interest in the growth and development of the Rocky Mountain territory, the dealer, traveling salesmen and jobber work together in a spirit of cooperation that reminds one of that old pioneer spirit when the aim of all was the upbuilding of this mountain country.

Denver jobbers stand ready to forward any community movement in this Rocky Mountain region. This cooperative work is facilitated by the following conditions:

First. An intelligent understanding of the requirements of the territory on the part of the Denver jobber, based on the careful study of the economic and industrial conditions of the community.

### Large Stocks—Quick Service

Second: Large stocks of merchandise are carried which completely meet these requirements. Every item carried by the retail merchant throughout Denver territory is carried in volume by some Denver jobber. These large and complete stocks are equal to any demand, whether emergency calls by long distance or telegraph or those coming through the regular channels of mail order or traveling salesmen. In any case quick shipment is assured.

Third. Doing business with Denver jobbers enables the dealer in this Rocky Mountain region to conduct his business on less invested capital and to turn his capital more frequently. It is not necessary for him to carry a large stock of any item, because he can so quickly replenish his stock from a Denver jobber. He knows that a long distance message or a telegram will bring speedy results. Many points in this region are served within twelve hours, where shipment from other jobbing centers would require from two to four weeks. It is an interesting fact that Denver jobbers carry in their warehouses merchandise to the value of $35,000,000.

### Lower Freight Cost

There never was a time in commercial history when as much capital was required to conduct a business as now. This makes the investment and turnover problem all the more serious. These conditions make it necessary for the merchant to secure his supplies as near home as possible. The difference of just a few days in length of time required to receive goods figures into a big thing when multiplied by the number of shipments made throughout the year. The Denver jobber is prepared to give quicker service and lower freight cost than other jobbers serving the Rocky Mountain region. Railroads branching out in every direction from Denver make prompt shipments possible. Nine trunk lines and their connections radiate out of Denver, aggregating more than 10,000 miles in the territory served. Of the railroads which cover the West, Denver is the center, with nearly 200 trains, carrying to remotest communities in Denver territory supplies of merchandise, and hundreds of Denver salesmen cover this territory frequently, regularly and thoroughly. They are thus enabled to establish a relation of personal interest, which is of tremendous advantage to both the retailer and jobber. These traveling salesmen have their homes in different towns in this Rocky Mountain territory. They are thus personally interested, together with the retailer and jobber, in building up and developing Denver territory.

## LEARN SELF CONTROL

(Copyright by Napoleon Hill)

You can never become a great leader nor a person of influence in the cause of justice until you have developed great self-control.

Before you can be of great service to your fellowmen in any capacity you must master the common human tendency of anger, intolerance and cynicism.

When you permit another person to make you angry you are allowing that person to dominate you and drag you down to his level.

To develop self-control you must make liberal and systematic use of the Golden Rule philosophy; you must acquire the habit of forgiving those who annoy and arouse you to anger.

Intolerance and selfishness make very poor bed-fellows for self-control. These qualities always clash when you try to house them together. One or the other must get out.

The first thing the shrewd lawyer usually does when he starts to cross-examine a witness is to make the witness angry and thereby cause him to lose his self-control.

Anger is a state of insanity!

The well balanced person is a person who is slow at anger and who always remains cool and calculating in his procedure. He remains calm and deliberate under all conditions.

Such a person can succeed in all legitimate undertakings! To master conditions you must first master self! A person who exercises great self-control never slanders his neighbor.

## YOU CAN'T AFFORD TO SELL CHEAP PAINT

There is no question now that cheap paint never pays. However, many people have always insisted they would rather put on cheap paint and repaint oftener than to pay more for a more durable, lasting paint in the first place.

Granting that there may have been slight grounds for such reasoning some years ago, when painters could be employed at 30 or 40 cents an hour, can there be any question about it now that painters must have 80 cents to $1.25 an hour?

With labor cost so greatly exceeding the cost of paint, shouldn't every paint dealer make it his business to convince the customer that the best grades—the most durable, lasting paints—are cheapest in the long run?

To put it another way, can a dealer escape criticism and the probable loss of his customer's trade if he doesn't make every honest effort to show him that a second or third grade paint is not a good investment, because it costs just as much to have it applied as the very best grade, and it cannot be expected to give nearly the same service and wear.

In short, cheap paint plus 100 per cent labor cost is dearer from a service standpoint than first grade paint plus 100 per cent labor cost.

## MERCHANTS SHOULD READ HARDWARE TRADE JOURNALS

(By W. C. Cole, Former President Missouri Retail Hardware Association)

The hardware dealer who reads the trade journals is always abreast of the times because he reads about what the other fellow is doing. The pages of the trade paper are the meeting place of many hardware minds on subjects that are interesting and instructive to all dealers. The hardware trade paper is to the average merchant what the post-graduate course is to the college student.

It is the place wherein the exchange of ideas occur, and it is an all-year-'round convention of the best hardware merchants of the country.

Through reading trade journals we have become personally acquainted with many of the best hardware men in the country, and we enjoy these friendships more than we can tell.

The trade paper is also the modern market place. Years ago it was necessary for the hardware merchant to go to market once, twice or even three times a year, and visit the larger cities, in order to buy his supplies and see what new goods had been developed during the year. Nowadays all the goods are announced through the advertising pages of the trade papers, and instead of the merchant now going to market once or twice a year, the trade papers come to him many times during the same period of time, and thus he is enabled to study closely the market conditions for the future and adapt and add to his stock new goods to take care of the growing demand.

The trade papers are entitled to a great deal more credit than they have received for the development of the hardware business during the past twenty years. Show us a live hardware merchant today and we will show you a man at whose desk arrive many trade papers. By constantly studying the pages of the hardware journals you will be able to advertise your business to better advantage. You will learn much about cost accounting, because of the experience of other merchants, and you will eventually be able to select the right location.

They will help you to keep your stock in proper shape, and many new ideas suggested about window trimming will produce additional profit for you at the end of the year.

Here are some of the things which we have learned by our constant study of the hardware trade journals:

We have learned to do better advertising. We have learned much about credits and collections. We believe our window displays are better than they used to be because we have watched through the trade journals what other hardware men have been doing.

"It cannot be done," cries the man without imagination. "It can be done, it shall be done." cries the dreamer.

## ENAMEL AND VARNISH PRODUCTS BRING THE WOMEN'S TRADE

There is no commodity that so appeals to the housewife, especially in these days of high cost, as a line of enamel, varnish and paints that the dealer can thoroughly recommend.

Successful merchants who are giving any attention at all to the sale of such products, enthusiastically bear witness to the fact that it is one of the easiest and most satisfactory lines to sell to every woman who takes pride in her home and likes to feel that she can touch up or re-enamel a chair, a stand or a table.

It is a satisfaction to know that she herself can do the work without having to send for the painter, who will "muss up things terribly."

In fact this appeal need not be confined to the women folk of the household, but nearly every family has one or more boys of an inventive turn of mind, who like to make things for the home, for mother and for sister, and when they can finish them complete with paint, varnish or enamel them to match the rest of the furniture or the woodwork, they are enthusiastic customers.

This is trade that can be easily had in addition to the daily opportunity to sell to your regular customers for their usual needs.

Every manufacturer is glad to cooperate with merchants in furnishing window displays, sales helps and advertising campaigns.

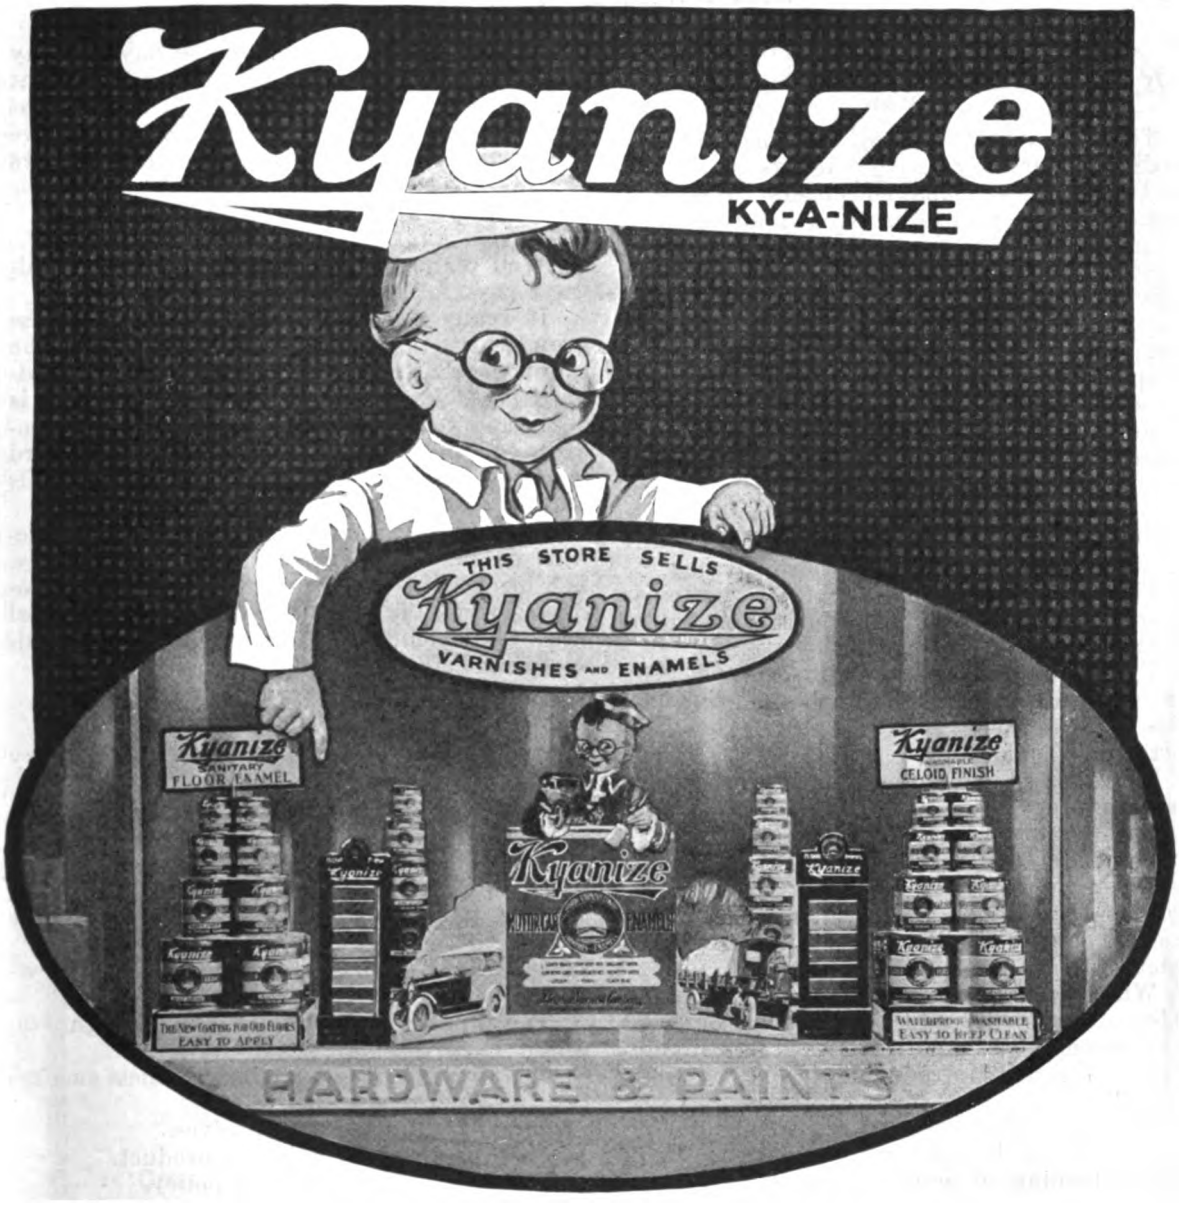
This work may be done at this season of the year as well as at any other. In fact, the disagreeable weather outside in many sections makes this an ideal time to feature these products. Practically every hardware merchant handles these lines to a certain extent, and it will pay him to give far greater attention to them than has usually been his custom.

Now is the time to get ready.

## YOUR WINDOWS WILL DO THIS FOR YOU

Urging people to buy at your store—that is business. You haven't the time to stand out on the sidewalk and personally talk with each passer-by, inviting them to come in and spend their money with you. But you can make your windows do this very thing.

Manufacturers of the goods you sell will help you to dress your windows and make them so attractive that they are bound to pull money in off the street for you.



Just ask them for sales and window trimming help and material and see.

**Robert H. Treman, president of the National Hardware Association, believes there will be no change in prices until next spring or summer, when the general public should begin to feel the effects of the decline. He believes if the immigration continues at the present rate, it will tend toward lower wages.**

**Here is a suggestion that merchants can adopt in featuring their paint, varnish and enamel products.**

## WHO PAYS FOR ADVERTISING?

**If Properly Planned, It Taxes No One and Pays for Itself**

There is a great deal of misconception regarding advertising as it affects prices of goods. A great many consumers think that because of the expense involved in advertising, an article advertised must necessarily cost more. Some dealers use this point as an argument in selling an unknown, unadvertised item. They tell their customers that because no money is spent in advertising they can sell it cheaper than the price its advertised competitor sells at, thereby saving the customer money. A superficial view of the matter would indicate that this line of reasoning is correct, but a sincere study of the facts pointed out in the following article from Bulletin No. 20, issued by Armour & Co., will convince any thinking person that such a view is wrong.

The dealer doesn't pay for it—the customer doesn't pay for it—and it is not taken out of the goods.

Two minutes' reading will prove to you that these are indisputable facts—and in a few lines we can show you conclusively how advertising is paid for.

Take, for example, a certain breakfast food manufacturer.

Last year their gross sales amounted to approximately $123,000,000 and $1,000,000 was spent in advertising.

This figures out that the advertising cost one cent in every dollar and twenty-three cents order.

Which would you rather pay—$1.23 for an order of nationally advertised goods, or $1.22 for the same items, unadvertised, practically unknown, figuring introductory work by your clerks?

Of course, that question is a foolish one on the face of it because your experience with rapidly turning advertised goods is daily proof of what your answer would be if that 1 cent difference were several times greater than it actually is.

The fact is, you don't even pay the penny of advertising cost per order of $1.23.

Advertising itself made it possible for this manufacturer to sell you these products to be accepted by the housewives of America, so that his overhead expense is greatly reduced by the volume production advertising has made possible. Your overhead is reduced because the goods are more than half sold to customers before they reach your store.

The cumulative good effect of national advertising has enabled us to deliver dealer and consumer a quality unquestioned—at a price only possible because more people, every year, are satisfied with their value and prove it to both of us by patronage.

The housewife does not pay for this advertising because she gets more quality for less money than she would otherwise have to pay—you do not pay for the advertising because it returns you many times its small fraction of your invoice in quicker-turn profits—and we do not pay for the advertising because it pays us.

"Who pays for the advertising?"

No one is taxed with it.

Well planned, country-wide advertising always pays for itself.

It really does make two blades of grass grow where there would be but one—and the salesman who tells you his house "puts the advertising dollars into the goods themselves" is admitting that his firm is out-of-date, unprogressive and selfish—because it takes hard work to introduce unadvertised goods. His house wants you to bear the selling burden.

For the day has passed when the housewife will take any new product unquestioningly. She has to be "sold" on those unknown products, which is time consuming educational work that should have been done for you by advertising before she entered your store.

## CONFIDENCE

Confidence is the basis of all satisfactory and enduring trade; of life itself.

The maid has confidence in her lover.

The matron has confidence in her husband.

The babe has confidence in its parents.

The sick man has confidence in his doctor.

The business man has confidence in his lawyer.

The capitalist has confidence in his investments.

The club man has confidence in his organization.

The first law of outstanding business success then is—Confidence!

First—Confidence in ourselves.

Second—Confidence in our product.

Third—Confidence in our policy.

Fourth—Confidence of the public.

Fifth—Confidence in our executives.

The successful business is that in which these units of confidence are complete and coordinate. And without these, enduring success is not possible.

## BUT WHAT'S IN A NAME?

Now that the nation is dry, an enterprising dopeologist has compiled the following for the benefit of the disconsolate "wets"; Rye, N. Y.; Bourbon, Ill.; Green River, Ky.; Cliquot, Mo.; Champaign, Ill.; Brandy Keg, Ky.; Brandy Camp, Pa.; Brandy City, Cal.; Port, Okla.; Sherry, Tex.; Brandywine, W. Va.; Ginn, Miss.; Wine, Va.; Tank, Pa.; Booze, Tenn.; Drinker, Pa.; Aqua, Va.; Vichy, Mo.; and Lithia, Fla. Take your choice.

**Golden Yellow Ochre** insures superior results because of its strong and clear tinting qualities. It is the Peer of all American Ochre and is very finely ground to a smooth, even texture.

Prices F. O. B. Tamms, Ill.

6 Barrels—2¼c per lb. I barrel—3c per lb. New paper lined barrels extra, $1.25 each.
300 pounds to the barrel.

**Natural Gray Ochre** is a natural, not a compounded color, producing beautiful gray tints of any shade desired. Very finely ground and strong in tinting qualities.

Prices F. O. B. Tamms, Ill.

6 barrels—1¾c per lb. 1 barrel—2½c per lb. New paper lined barrels extra, $1.25 each.
350 pounds to the barrel.

**Danish Gilders Whiting** is superior to the English Cliffstone Whiting for Kalsomine, Fresco and Putty, because it is finer, whiter and more carefully prepared in grinding.

Prices F. O. B. Tamms, Ill.

6 barrels—1½c per lb. 1 barrel—2¼c per lb. New paper lined barrels extra, $1.25 each.
350 pounds to the barrel.

**Oran Venetian Red** a very strong, clear Red Color that gives your tints a special individual tone. Very durable.

Prices F. O. B. Tamms, Ill.

6 barrels—4¼c per lb. 1 barrel—5c per lb. New paper lined barrels, $1.25 each.
400 pounds to the barrel.

## ST. LOUIS ACCESSORY SHOW

The Third Annual Exhibit of the Accessory Division of the American Hardware Mfg. Assn. will be held at St. Louis, Mo., Nov. 30, Dec. 1, 2 and 3, just as this issue is going into the mails. Nearly 300 booths are being erected at the St. Louis Coliseum for the use of the associate members of the association, and everything points to a record breaking attendance.

In conjunction with the Automotive Equipment Association show at Chicago in November, these two great buying opportunities draw visitors from the length and breadth of the United States and from Canada and the southern countries.

Automobile accessory manufacturers are finding that complete distribution for them means catering both to the hardware and automobile trade. Each has its place and each one is an important factor. As a matter of fact, the importance of the hardware merchant, both wholesale and retail, in distributing automobile accessories is growing constantly and rapidly.

During these times of lull and uncertainty in the automobile business the hardware merchant is stepping in, with his steady resources, level head and his shrewd buying and selling experience to tide the automotive accessory manufacturer over the uncertain times.

The year 1921 will particularly favor the hardware merchant who features his automobile accessory stock, for this is the year when renewals and auxiliary appliances of a useful, economical and life-prolonging character are going to be especially to the fore. It is going to be much easier to sell a man a can of enamel, a quart of radiator fluid or a new tire than it ever was before, for he is not going to buy his annual "new model."

The automotive industry increased 750 per cent in the last five years. Who can expect a very permanent slowing down?

With 8,000,000 motor vehicles in the United States, it requires 1,000,000 or more cars annually for replacement purposes alone, and the opportunity for accessories is correspondingly great.

---

A. E. Ganaway is the new manager of the North Brothers' hardware and implement store at Gilbert, Arizona. Mr. Ganway was formerly at Phoenix.

---

The F. E. Clough Hardware Co. has been reorganized at North Fond Du Lac, Wisconsin, and will handle a full line of household goods, specializing on heating stoves and farming implements.

---

J. B. Leonard and his son, John F. Leonard, are the new proprietors of the former business of George Imhoff at Folsom, California. This business dates back to 1857, during the gold mining days.

---

Fire, believed to have been of incendiary origin, recently destroyed the hardware establishment of the W. L. Shearer Co. at Toppenish, Washington. The loss was estimated at $37,000, which was covered by insurance.

## WANTED—SUNSHINE SPREADERS

Shut a new-born baby up in a dark room, away from light and sunshine, and in a comparatively short time it will go blind.

Shut a merchant's stock up in a dark dingy room, with poor ventilation, little light and no sunshine, and if his business does not die, it might far better, because it will always be puny and ailing.

It makes no difference whether you are a Christian Scientist, or a shouting Methodist or a water-way Baptist, the fact remains that the human family never thrives on despondency and gloom. To be at our best, we demand sunshine in our business, in our home and in our lives. Physicians tell us that certain people are so physiologically, so chemically, physically constituted, that while comparatively well themselves, they are spreaders of certain diseases, more particularly typhoid fever. We do not know about that, we leave the guessing to the licensed guessers, but we do know that if a man would be successful in business, he must be a Sunshine Spreader.

---

## RELIANCE LOCK WASHER ASSORTMENT

The Reliance Manufacturing Co., at Massillon, Ohio, is particularly featuring its hardware and garage lock washer assortment illustrated herewith. This is a substantial receptacle which can be refilled as needed, containing 4000 of the most useful sizes of washers in thin, medium and heavy sections of every bolt size from No. 4 screw to 1-inch bolt.

The merchant who deals with machine shops, garages and manufacturing concerns using bolts and screws to a large extent, will realize the value of such an assortment as this. Any merchant who cannot get the assortment from his jobber should notify the Reliance Manufacturing Co., at Massillon, Ohio, or one of the company's branches at New York, Detroit, Cleveland or San Francisco, California.

---

Walters Bros. have bought the stock of the Casselton Hardware Co., at Casselton, North Dakota.

---

Wallace Hedrick has purchased the interest of Mr. Mitchell in the well known firm of Mitchell & Harris at Rupert, Idaho, and has already assumed the duties of co-partner.

---

The Kerman Hardware Co., at Kerman, California, has over 5400 square feet of floor space in its new building devoted to the display of shelf hardware, stoves, household goods and furniture. The machinery department of the Kerman Hardware Co. is located in a separate building.

# Why the Dividing Line?

IT doesn't exist. There is no longer a dividing line between tire selling seasons.

More and more the motor car is proving itself a necessity the year around, and the alert dealer who keeps his stocks right up to the minute and who—and this is more important—keeps pushing tires and advertising them right through fall and into winter, is the man who is cashing in the heaviest.

Go right after this fall and winter business—don't wait for it to come to you or perhaps drift by your door. There is a lot of it and with a dependable, popular, nationally-advertised and nationally-trusted tire like Diamond you can run up that "total year's sales" to a figure that you never thought possible.

THE DIAMOND RUBBER CO.
Incorporated
*Akron, Ohio*

## PUSH VS. PULL IN SELLING

In selling there are essentially two methods —the method of push and the method of pull.

The older industries—the steel industry, the textile industry, the food industry—were well established on the method of push, which involved the idea of pushing the merchandise by personal sales efforts from the manufacturer to the jobber, thence to the retailer and thence to the consumer, who accepted what was offered him. When the supply catches the demand the system breaks down and the manufacturer who has not entrenched himself with the consumer finds his merchandise backing up.

Today as never before the method of pull, or the method of advertising to the ultimate consumer, is accepted by old concerns and old industries as a fundamental selling method. In the past five years there has been a remarkable growth in advertising volumes in all the leading industrial classifications.

This growth was probably stimulated by war conditions, but a study of advertising convinces us advertising is on a sound foundation and the increase in volume is the natural evolution of increased appreciation of the strongest selling force.

In 1919 the aggregate expenditure of the 100 largest advertisers exceeded eleven and a half million dollars, and showed an increase of approximately one-third over the expenditure of the 100 largest advertisers in 1918.

Advertising is proving advantageous to the manufacturer.

It must also work to the advantage of the ultimate consumer — otherwise manufacturers would have failed to build permanent markets and would not be able with each succeeding year to spend more in advertising.

### Proved Advantage to Distributors

It must also have proved to the advantage of distributing factors, otherwise sales resistance would have nullified the manufacturer's efforts. Authoritative figures are lacking, but we are under the impression that with the exception of a few concerns that grew great before the development of advertising, those jobbing and retail establishments are showing the most rapid and most stable growth that take advantages of market opportunities created by the manufacturer's advertising.

## HE KNEW THE PLACE

"Now, boys," said the teacher in the juvenile Sunday school class, "our lesson today teaches us that if we are good while here on earth, when we die we will go to a place of everlasting bliss. But suppose we are bad, then what will become of us?"

"We'll go to a place of everlasting blister," promptly answered the small boy at the pedal extremity of the class.

## THE SONG OF THE CATALOG FIEND

(Dedicated to the man who "makes" the catalog)

We're the goats of the organization,
We are cursed and despised of men;
Though we struggle and rave we are doomed to slave
Next door to the Export pen.
We cut and we paste till noonday,
We paste and we cut till night,
But with all of our skill let us try as we will,
We can't get the damned thing right.

The salesman goes out in the morning
And calls on his trade with glee,
The purchasing guy does nothing but buy,
His hours are happy and free.
The credit man fools with his blacklist
And trade acceptance and dun;
But we are the nuts who juggle with cuts
From morn till the setting sun.

So we play with our picture puzzle,
And we build to the best of our ken,
When the word comes across from the discount boss,
To do it all over again.
We're told to take out an item
And we're ordered to put it back
Till we tear our hair and in dark despair
We pass the buck to "Mac."

We toil with the Expert Reamer,
At the Wasco line we slave;
Our teeth we gnash over Weaver and Asch
And at Bestone & Getone we rave;
We pale at the name of Niehoff,
Povasco our fury starts,
And we curse the Lord at the name of Ford
And his hundred and something parts.

We're sick of the Wonder Worker
And Crum is a bitter pill;
We could take the axe to Johnson's Wax
And old Doc Latimer's Still.
We're fed up on Packard Bezel,
On Overland, Buick and Stutz,
But we'll spoil the map of the venturesome chap
Who mentions Top Prop Nuts.

There's a Throne aloft in high Heaven,
Where the angels with joy await
To seat on High the thoughtful guy
Who sends us a full page plate.
But a pit is dug deep down in Hades,
Where a lost soul will never be missed,
And it's down below that the bloke will go
Who says, "Listen, they've changed the list."

So we cut and we fit at our leisure,
And we fit and we cut in our haste,
Printers' ink is our favorite drink
And we lunch on a pot of paste;
We break all the ten commandments
And we curse till we raise the roof,
And our heatless days we spend in a maze
Of pages of galley proof.

For life is one long struggle,
It seems never to go just right,
But hang the man who'd throw up the can
And give up the daily fight.
For the joy of a thing accomplished,
Imperfect as it may be,
Can never be told in silver and gold,
From work you get your degree.

## KNOW THE GOODS—AND THE NEEDS

Knowing is the vital thing in business.

Knowing provides the element of reliability—of sureness. It gives us ability to tell others what they desire to know; to make decisions for ourselves when we buy; to assist others in making decisions when we sell.

Every buyer that passes your window or comes through your door has a particular need. Every article upon your shelf has its ability to serve. Both the need and the sale points exist. Become acquainted with them. Then link them together; their combination means one thing necessary to business growth—sales power.

In business there is a perpetual struggle between the guesser and the knower. In the wake of the guesser there is dissatisfaction and distrust; in the wake of the knower, satisfaction and confidence.

As buyers we want dependable facts concerning merchandise. When somebody guesses, we suffer. As sellers we want dependable facts just as earnestly. When we give out the result of someone's guesswork, our customer suffers and in the back-fire we are injured, because we lose good-will and confidence.

The guesser sells once, and that time by accident. The knower sells often, repeats his sales and has a large volume. He is equipped and qualified for the job of creative salesmanship.

Two kinds of knowing are necessary to get goods across the counter regularly—knowing the goods, knowing the need of buyers.

## STRAIGHT THINKING NEEDED

What this country needs more than anything else is straight thinking.

With twenty-five million straight thinkers in America, the cause of much of the restlessness, inefficiency, animosity and apathy would be automatically removed.

The pity of it is that the majority of the men and women are not thinkers—orderly thinkers. Their thinking apparatus is out of time, as undependable as the weather.

Conditions, good or bad, are as we think. Our thoughts are the seeds which may yield happiness or grief, prosperity or poverty, tranquility or strife, charity or selfishness, efficiency or inefficiency, industry or indolence.

Thoughts are words expressed. Words incite men to action. Action brings results, good or bad.

## A COMEBACK

The lawyer was cross-examining a witness to a robbery. "When did the robbery take place?" he asked.

"I think—" began the witness.

"We don't care what you think, sir. We want to know what you know."

"Then if you don't want to know what I think, I may as well leave the stand. I can't talk without thinking. I am no lawyer."

## NEW ONE HAND-Y ELECTRIC DRILL

A one hand electric drill, designed for use in the garage and machine shop, has recently been developed by the Knight Engineering and Sales Company of Los Angeles.

The "One Hand-y" electric drill has a splendidly designed pistol grip, with a convenient switch located under the natural position of the thumb, and affords complete control of the drill with one hand. It has ample power to carry a quarter inch drill bit, through either steel or wood, as fast as the work requires.

The motor, designed by the engineering staff of the Westinghouse Electric and Manufacturing Company to meet the particular requirements of the drill, is air cooled and being of the universal type, will operate on either one hundred ten volts, direct current, or one hundred ten volts alternating current, up to seventy cycles.

The drill, weighing only three pounds complete, is encased in a pure aluminum housing and is especially adaptable to garage and machine shop work, where numbers of small holes need to be bored in inaccessible places.

### Mr. Knight Long in Hardware Trade

George L. Knight, inventor of the drill and president of the Knight Engineering and Sales Company, has been connected in various capacities with the hardware field since 1890. From 1907 to 1909 he was secretary and purchasing agent of the Pittsburg Gage and Supply Company, the largest mine, railway and mill manufacturers and jobbers in the East.

In 1910 Mr. Knight went to Los Angeles, where he has been engaged in the manufacture and sale of mining equipment until his recent announcement of the organization of the Knight Engineering and Sales Company.

Schooling & Kivett have opened a hardware store at El Rino, Oklahoma. Their stock will comprise hardware, household goods and farm implement lines.

P. C. Hickerson is the new proprietor of the hardware and implement business of E. T. Hooper at Lankershim, California, and will specialize on electrical and plumbing goods.

Warren Currier, vice president of the Imperial Valley Hardware Co., and for ten years manager of the Holtville branch of the company, has taken charge of the Brawley store.

*DEALERS—*
*Write for our book listing over 1500 kinds of Harvey Springs and for details of Harvey advertising helps.*

*An Arch is as strong as its keystone*
*A Spring as strong as its center*

# Harvey Springs are Boltless

THE ordinary spring, weakened by a hole in its center, punched cold to accommodate a bolt, is like an arch with a weak keystone. The vital spot lacks strength.

The Harvey Spring is boltless and has no weak spots. It is as strong at the center as at any other point. Instead of a bolt hole at the center each leaf has an indention on one side and a bead on the other, forged hot in one operation. The bead of one leaf fits into the indention of the next leaf and the whole spring is held together by a strong clamp. No metal is removed and the steel fibres are unbroken.

**This feature, with that of the patented Harvey process of heat treating and tempering, gives the Harvey unexcelled strength and resilience. It adds safety and comfort to the motor car and lengthens the life of the driving mechanism.**

**The Harvey Spring is practically unbreakable, even under unreasonable strains. Once sold it stays sold.**

**Our broad, unconditional guarantee protects both the dealer and the purchaser.**

**Harvey Spring & Forging Co.**
**118C Seventeenth Street** **Racine, Wis.**

## SELL THEM WHAT THEY NEED — NOT WHAT THEY ASK FOR

When a man wants something, he is perfectly definite about it. He has an emotion-picture in his mind of the thing he wants which represents the acme of his powers of comprehension and includes anything and everything within reach of his experience and memory that will fit plausibly into his mental "blue-print." that's what he wants!

When this man comes to ask for the thing he wants—when he opens his mouth, he realizes that his mental picture may not exist or that two or three different people may have tried to make that "something" and, of course, each one has had a different ideal upon which they have built.

The fluency of the emotion that picked up the "want" in the man's mind is not equally fluent when it comes to the "ask" and the man may be very shy, diffident or ill at ease. Many times he is unacquainted with what he can buy and hesitates because he doesn't know the right name to apply to the thing. At any rate—what he asks for is very frequently a very different thing from what he really wants.

The indifferent sales-clerk will not realize that. He will hear the question and answer the obvious and superficial way. Sometimes the answer is merely brief, sometimes it is confusing, and sometimes it is as awkward as the question.

The salesman, hearing the question, has sufficient friendship and sympathy for all mankind to get an intuition or "hunch" of what the man is after and he draws the man out so that he gets a good notion of what the man wants to accomplish. Then the salesman can tell quickly if there is such a thing made.

It may be something entirely different from what the man requested! But the man is both pleased and satisfied.

Isn't that really what we mean when we say, "Don't sell 'em what they ask for—sell 'em what they need!" —Helix.

---

You cannot get away from it that the correct foundation for wages or salary is experience and ability. There is an old Welsh law, still to be seen in faded statute books of the Middle Ages, basing the cost of cats on the foundation already mentioned. The law reads that a "kitten from its birth until it can see shall be valued at a penny; when it begins to mouse at two pence; after it has killed mice at four pence," which, by the way, speaking of the high cost of living, was the cost of a calf in those same days.

---

Make sure the prize you chase is worth the price. If you cultivate your talents you'll always find an opportunity to use them.

## A NEEDED ACCESSORY

The Imperial Auto Folding Steel Chair, illustrated herewith, is a necessary accessory for every automobilist. Each owner will need one or more, and it needs only to be displayed to make sales.

While primarily designed as a convenient auxiliary seat in automobiles, it is a convenient chair for the camp, launch and many other places where it can be easily carried folded up.

The frame is made of special oval formed steel, finished with a durable and lasting coating of black Japan. The seat and back rest are padded with felt and upholstered with black waterproof art leather.

These n ay be obtained in both adult and children's sizes.

The Imperial Bit & Snap Co. will be glad to give full data and information to any of our readers upon request.

---

## CANADIAN-DETROIT TWIST DRILLS

The Detroit Twist Drill Company has announced the establishment of a manufacturing plant in Walkerville, Ontario, known as the Canadian-Detroit Twist Drill Company. The Detroit Company decided several months ago that the growth of Canadian industry warranted the construction of a plant across the border, and the new company was accordingly incorporated. High speed drills and reamers will be manufactured, and a complete stock will be built up as soon as possible. The nucleus of the Walkerville organization was formed from the personnel of the Detroit plant.

About thirty men will be employed at the start, and the company expects to expand as fast as business conditions warrant. The officers and executives of the new company are as follows: President, Muir B. Snow; vice president, Lewis H. Jones; treasurer, H. H. Sanger; secretary, P. C. Hill; manager, R. A. B. Goodman; superintendent, George Johnston. Manufacturing operations have already begun, and the first drills were completed November 15th.

---

The McKinley Hardware Co., Rock Island, Illinois, are adding auto accessories and supplies to their stock.

---

The Wold Hardware Co. are new owners of the stock formerly owned by A. H. Kuehl, at St. Ansgar, Iowa.

---

The Carlinville Hardware Co., engaged in business at Carlinville, Illinois, handle complete lines of general hardware.

---

Frank Eckhard, who recently purchased the hardware business of D. W. Pote & Sons, Stuart, Iowa, is handling a line of auto accessories.

---

The Brantley Bros. Hardware Co. have been incorporated with a capital stock of $50,000, in Troy, Alabama, and will handle full lines of hardware, household furnishings, accessories and implements.

# Boyco Service Units are Business Builders

Boyco Service Units are attractively finished; the Gasoline and Oil containers being suitably painted and stenciled, while the Water container is neatly covered with shoddy blanketing. Note the compact, sturdy construction.

Boyco Service Units build business because they are practical, common sense necessities to every motorist. They fill an actual need on every automobile, truck, tractor or other motor conveyance. Their sale is not confined to seasonable demand. They add dependable year 'round business in every locality.

They are original, attractive and practical in design. They consist of combinations of Boyco Autocans for Gasoline, Oil and Water; come in five sizes suitable for any individual requirement; and provide an ever convenient and ample emergency supply of fuel.

In construction the Boyco Service Unit is built to last; to stand up under hard usage; and to adapt itself most handily to constant service on auto, truck or tractor. The Autocans clamp securely to the running board or like object and are held absolutely rigid with four points of contact. No amount of vibration can loosen the containers, cause rattles, or bring about the loss of any part of the equipment along the road.

Boyco Service Units mean desirable business to accessory dealers, garage proprietors, hardware merchants and all business houses who deal in materials and equipment for commercial and pleasure motor vehicles.

Write today for the Boyco Canteen and Carrier Booklet, containing full information regarding sizes, weights and other particulars.

**Boyle Manufacturing Co.**
Los Angeles
San Francisco

Ask your dealer for Boyco Products. If he cannot supply you, mail us your order with his name and address. Service will be rendered.

## THE CONTRACT THAT WASN'T A CONTRACT AND WHAT IT COST THE BUYER

(Copyright by Elton J. Buckley)

I have before me the report of a case, just decided by the highest court of the state in which it transpired, which holds a suggestion for readers hereof which may perhaps save them some future trouble. The case concerns the making of a contract to buy goods, and the point it makes is that you can't hold the other party to a contract responsible under it unless it really was a contract. Sometimes a man thinks he has a contract when he hasn't, but he could have had if he had taken the simple precaution which this case teaches.

A, the seller in this case, offered to sell B certain merchandise at $17.75 per ton. The offer was in writing, and A wrote a note asking B to sign his acceptance at the bottom and return it so that the parties would have a complete memorandum of the transaction.

B received the offer, and returned it signed, but he added to it these words, "Buyer's weights to govern settlements." Accompanying this was a letter noting the change and expressing the hope that it would be satisfactory.

A, the seller, got the communication, but made no reply to it. B took it for granted that A accepted the change and assumed that the transaction was complete. He did nothing more about it for a few weeks, or until the date when delivery was to have been made. When the goods didn't come, he wrote to A and demanded delivery. By this time the market had materially advanced.

A refused to deliver, on the ground that there had never been a contract, and B went out in the market and bought goods at a considerably higher price. He then sued A for the difference between $17.75 a ton and the price he had to pay. The lower court decided against him, and the Appeal Court affirmed. The theory on which the case was decided was that when B returned A's offer with a new provision in it, viz: "Buyer's weight govern settlement," he did not accept the offer at all, but merely did what was equivalent to making a counter offer, which A didn't accept. Therefore there was no contract and no obligation on A to deliver.

I hope the readers hereof will pay some attention of this case, because thousands of buyers who get offers in writing leave the way open to a complete repudiation of the contract by the seller by tacking on some new condition which is not in accordance with the offer. Unless the seller explicitly accepts this new condition—and he should do it in writing if the rest of the contract is in writing—there is no deal, and the seller is not under obligation to do anything if he doesn't wish to.

The following from the decision states the law even more clearly:

We are unable to see how, under this state of facts, the plaintiff can recover, having received a written proposal for a contract and having altered it in a material respect and returned it. The buyer here was in itself in the position of making a new proposal and admittedly it never received any assent to that proposal and without an assent, either expressed or implied by circumstances, of course, there was no contract. The contention of the buyer, as we understand it, is that under the circumstances the defendant (the seller) was bound to make some answer to their communication and that a failure to do so amounted to an assent. We are clearly of opinion that the seller was not under any duty to make an answer to the communication and that he was not estopped by his silence. The rule is therefore discharged.

In these cases business men fall into a rather widespread error, viz: that when somebody offers them goods on certain terms, and they agree to take them provided the terms are changed a little or something else is done, the seller is under obligation to refuse the new condition if he doesn't want to agree to it. If he is silent they think he is bound to accept it. That is the error which B fell into in the above case, and the decision of the court shows where it landed him. There is nothing to it at all: the seller need not pay any attention to it.

The moral is: If you suggest a change in any offer made you for the sale of goods, get the seller's assent to it in writing. Naturally the same thing applies when a seller does it.

## MOTO-METERS IN ENGLAND

George H. Townsend, president, and E. V. Hennecke, sales manager, of The Moto-Meter Company, Inc., are visiting England and France for the purpose of establishing branch factories, which will produce Boyce Moto-Meters for the European market.

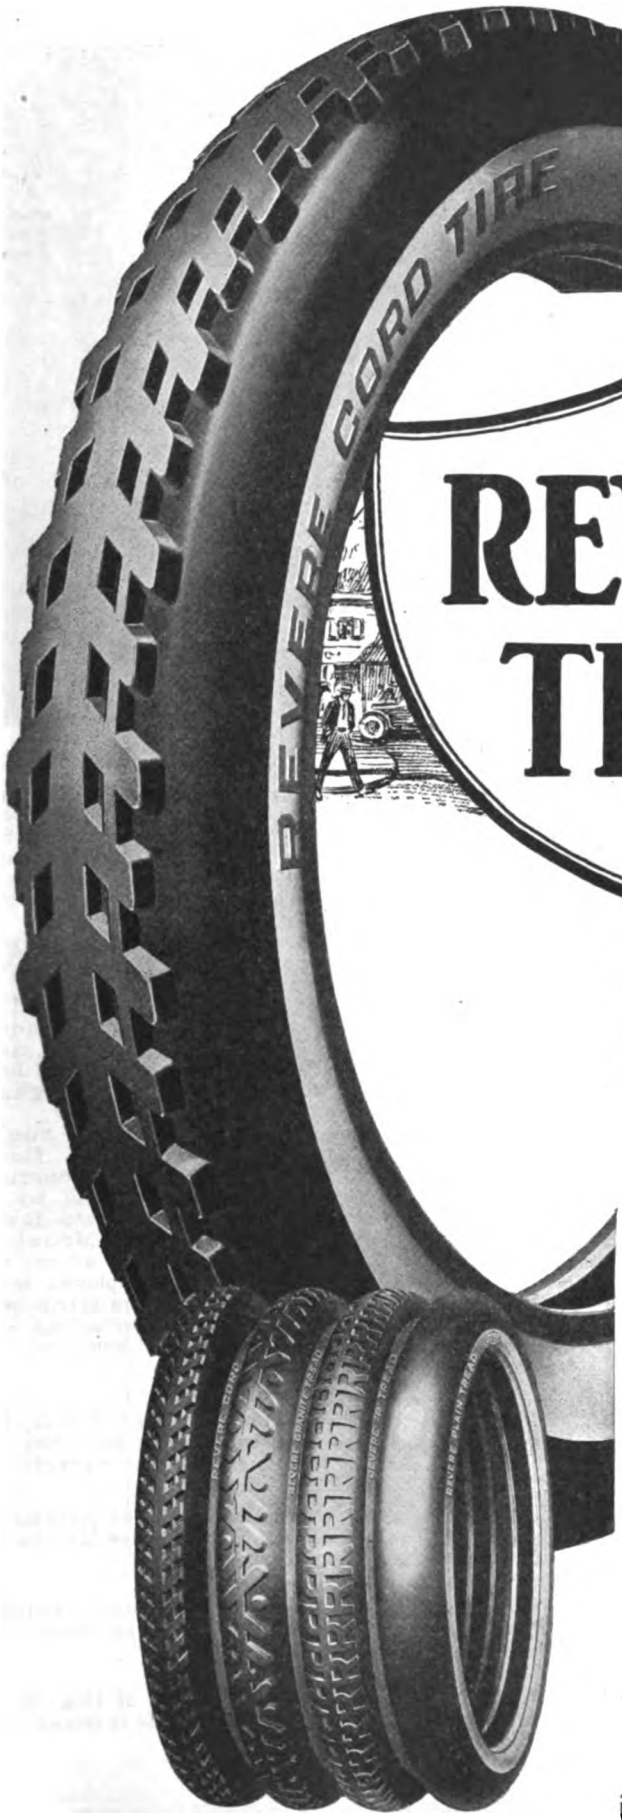
There has for several years been a rapidly growing demand for Boyce Moto-Meters in every country where automobiles are used extensively, and this demand has now reached a point where it can hardly be supplied by the American company, which, since its establishment in 1914, has outgrown two factories and is crowding the third. The plant at Long Island has a production of 8000 Moto-Meters a day. There are already more than 3,000,000 in use upon passenger cars, trucks, tractors aeroplanes and motor boats.

## WANTS TO REPRESENT AMERICAN MANUFACTURERS OF SPECIALTIES

Editor HARDWARE WORLD:

We are in position to represent American manufacturers in the specialty line.

We are particularly interested in securing a line of corrugated fasteners, strappings, etc.



We want to tell you that we prefer the HARDWARE WORLD to any other American journal we have seen. We want you to continue this to us.

Hamburg, Germany. L. WALTNER & CO.

Arthur McCoy has purchased the interest of D. Pilkinton in the Belding Hardware Co. at Belding, Michigan.

Claude L. Winter is the organizer of the Reliable Hardware Co., to conduct a wholesale and retail business at Greenville, Michigan.

## WHAT TONNAGE MEANS

The term "tonnage" in the shipping business has five meanings, according as it refers to deadweight, cargo, gross, net or displacement tonnage. Deadweight tonnage is the difference between the number of tons (of 2,240 pounds) of water a vessel displaces "light" and the number of tons it displaces when submerged to the "load water line."

Cargo tonnage refers to either "weight" or "measurement." The weight ton is the United States and Great Britain is the English long ton of 2,240 pounds. A measurement ton represents 40 cubic feet of space.

Gross tonnage refers to vessels and not to cargo. It is found by dividing the capacity of the vessel's closed-in spaces in cubic feet by 100. A vessel ton is 100 cubic feet.

Net tonnage is a vessel's gross tonnage less the space occupied by crew, engine room, bunkers, et cetera. In other words, it is the space available for passengers and cargo.

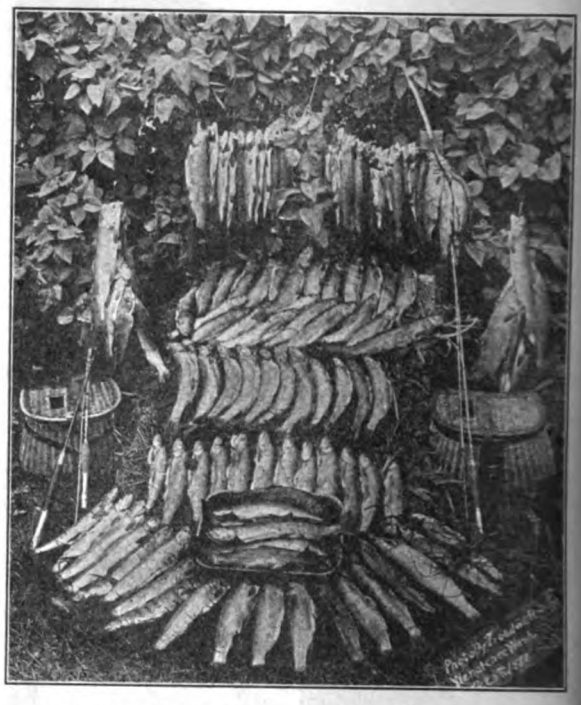
The displacement of a vessel is the absolute weight in long tons of the vessel and its contents. Its light displacement is its weight without stores, coal or cargo. Its loaded displacement is the weight of the vessel with cargo, fuel and stores.

The Shipping Board, upon whose definitions the above has been written, gives the following relative tonnage figures for a modern freight steamer: If a vessel has a net tonnage of 4,000, its gross tonnage will be 6,000, its deadweight carrying capacity, 10,000, and its loaded displacement, 13,350 tons.

—Scientific American.

## ACCESSORY MEN, NOTE!

Here's an advertising-selling idea used successfully by an accessory dealer in a small middle western town. In his window he piled a number of broken automobile parts, such as worn piston rings, burnt bearings, and other parts that are frequently ruined by incorrect lubrication. Directly above this pile of parts he placed a sign reading:



> JUNK
> The Results of Hit or Miss Lubrication

Alongside of this "junk pile" was a neat display of two or three well known brands of oil with a sign reading:

> Correct lubrication prolongs the life of your car and lowers your operating and upkeep costs. We have the correct lubricant for your car. Come in and ask us.

Did it pay? It sure did.

When you work, work. When you play, play. Anything worth doing is not worth doing by halves.

## PART OF WELLS & WADES' RECEIPTS

When Wells & Wade at Wenatchee, Washington, make out their income tax statement next year, they will have to include among their income 25 x 20 pounds of fish and charge this against the salary account.

The accompanying illustration shows a record catch, which 25 employes of the company made at Twin Lakes, near Wenatchee, after each of the employes had carried a length of pipe a distance of five miles and to an elevation of one mile.

Twin Lakes is a forbidden fishing grounds and a peerless cutthroat eyeing station. Last year the supply of fresh running water gave out at a critical time, and 180,000 young cutthroat trout would have been lost but for herculean efforts on the part of the game warden.

This year the Game Commission decided to run a 600 foot length of pipe from a stream that flows into the lake down to the station, to insure a constant flow of water for the little fish. The pipe had to be carried up to Twin Lakes, one mile above sea level, by hand, two-thirds the distance up Dirtyface Mountain in the heart of the Cascades. Therefore, after the labor had been done, the Wells & Wade employes were turned loose at Twin Lakes, and this record catch was the results. About four hundred fish, averaging one and one-fourth pounds each, were brought home by the anglers.

## AN EASILY MADE MAILING LIST

"We consider our system of securing and maintaining a mailing list the very corner-stone on which our business is built," says W. A. Denny, hardware merchant of New Hampton, Mo., who gives the details of his system as follows:

"Within the limits of our territory there are forty-eight school districts. In each we have what we call our agent. We select these agents from the best man or woman friend we have in the district and send them the blanks to fill in with the name of every person in their district, beginning with the man of the house; then the wife, if living; then the children, and the approximate age of each.

"We explain just what we want done, and why, telling them as soon as they mail this list to us, we will mail them a check for $1; that if anyone moves into their district or moves out, if they will at once send us the names, we will send them five cents for each name.

"Now, as soon as these lists arrive, our office girl takes them and typewrites the names of each family on a separate card, labels the leader card with the name of the school district, and the name of our agent for that district.

"Behind this card go the names of everyone in the district. So there we have our trade territory card-indexed and absolutely as correct as we can get it in any way, and so arranged that it automatically changes when newcomers arrive, or movers go, covering 1000 families of 5000 people."

For most stores, such a system would meet requirements very satisfactorily. It maintains a fairly complete and up-to-date mailing list—a dependable means for keeping in close touch with one's buying public by mail. Even a mailing list that tells only the name and address of every farmer in one's territory is far better than no list.

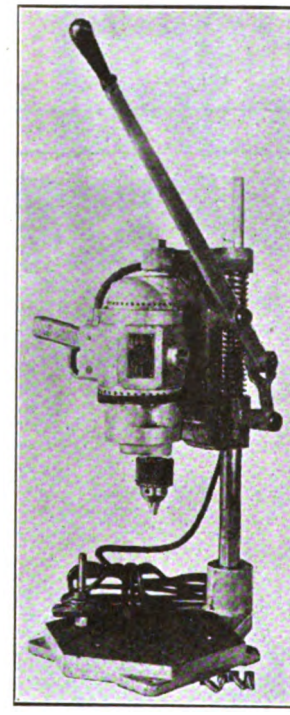
That has been proved by catalog houses, which, with only such lists to guide them, persistently get their advertising into farm homes and make enormous profits from aggregate returns.

## A STUDENT OF ECONOMICS

A Prescott, Ark., lad is evidently a close student.

"When water becomes ice," asked his teacher, "what is the great change that takes place?"

"The greatest change, ma'am," said the little boy, "is the change in price."



---

"To get workers on the high gear, give them a word of cheer."

---

"A sign of the times. There are no more 'janitors.' They are all 'superintendents' now."

## BLACK & DECKER BENCH DRILLING STAND

A new bench drilling stand which has just been put on the market by The Black & Decker Mfg. Co. takes ⅜-inch, ½-inch, 9-16-inch, ⅝-inch and ⅞-in. Black & Decker Portable Electric Drills, which can be quickly and easily detached. The bracket carrying the drill can be raised or lowered on a vertical column and is secured in any desired position by means of a split collar and clamping screw. The drill may be swung clear of the base, making it possible to use this bench drilling stand for such work as applying ring gears to automobile axles, drilling in the ends of shafts, and other work too high to be drilled on the bench.

An extra long feed lever gives a feed ratio of 6 to 1. 100 pounds pressure applied to handle, feeds a drill under 600 pounds pressure. This means fast work with little effort.

The modern garage and machine shop find the portable electric drill indispensable and usually have frequent occasion to use a drill press or sensitive drill. This bench drilling stand adapts the drill "with the pistol grip and trigger switch" to either use.

---

Bade & Ruetter is the new name of the firm of Bade Bros., Berger, Mo.

---

Fair & Bryan are the new owners of the Gillalan Hardware & Implement business at Hardy, Montana.

---

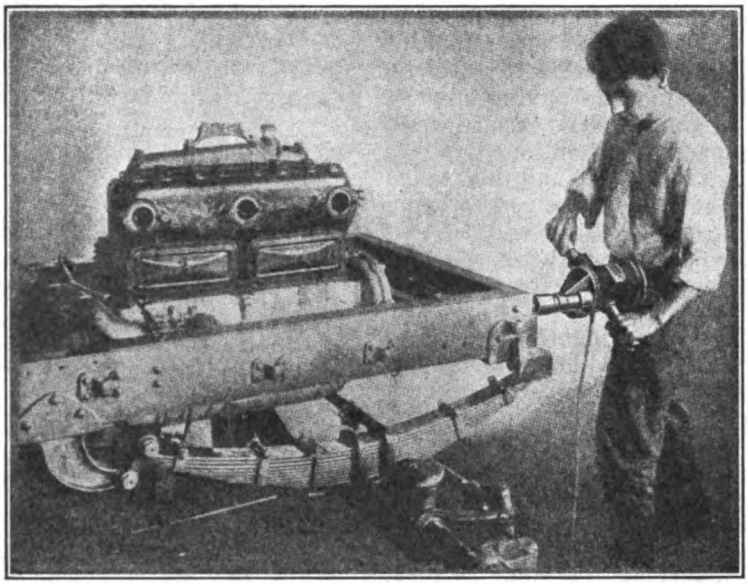
J. A. Peplinski Hardware & Implement Co., at Pulaski, Wis., has been incorporated with a capital stock of $50,000. They handle full lines of hardware, implements, automobile accessories and housefurnishings.

---

The Beacham-Mignardot Hardware Co. is planning to erect a two story building at Santa Fe, New Mexico, so they may carry increased stock in all lines of hardware, housefurnishings, automobile accessories and sporting goods.

---

The E. M. Cope Commercial Co., Redlands, California, which was recently destroyed by fire, have been receiving their new stock, and are planning to add materially to their line. They report a most excellent outlook for business.



---

The A. Stroota Hardware Co., Marathon, Wis., has purchased a new store building, which will give them facilities for carrying an increased stock of everything pertaining to hardware, sporting goods, housefurnishings and other accessories.

---

The Turner Hardware & Implement Co. have purchased the hardware stock of Hughes Bros., Oakdale, California, and will conduct the business as a branch of their Modesto establishment. They are one of the most enterprising concerns in California handling full lines of hardware, implements, housefurnishings, automobile accessories and sporting goods.

## USING THE USELESS

What to do with the immense amount of furnace slag that accumulates in the iron foundries was successfully solved some time ago by an English concern, which has converted this slag into paving flags, paving tiles, bricks, etc.

The process of making the paving flags is about as follows: The slag is carried to a crusher having a capacity of about one hundred tons daily, where it is broken up and then taken to screens, where it is graded, the coarse being run into cars to be used as ballast and the rest subjected to further crushing. The excess dust is removed by screening and used for the manufacture of tiles.

The slag suitable for paving flags is mixed in a dry state with a cement-like material and then water is added and the whole thoroughly incorporated. A pressure of four hundred tons is exercised upon this mixture by a hydraulic press and all the moisture is forced out, leaving a hard, dense block of uniform character.

A different cementing material is employed in making tiles from the dust, the effect being to give the mixture a certain amount of plasticity which allows it to be moulded by mechanical means and permits it setting into a dense mass. If rapidity of production is desired the action of setting can be accelerated by artificial means and the goods made ready for use within twenty-four hours. The addition of coloring matter allows the construction of building blocks of various hues. Experience with these slag materials shows that exposure to cold and frost has no effect except to produce greater hardness in the material.

---

We all like to read stories of success, for the reason that we take the part of the hero instinctively; and every time we do this our ideas are molded along those lines. Live success, think success, act success, and you will achieve success.

---

Make every occasion count for something—either the making of friends, the securing of information, the gaining of prestige, or the increase of capital in some way. Few people get rich, for the reason that they are prone to whittle from themselves in place of whittling towards them.

---

## LIFE!

A little sun, a little rain,
A little loss, a little gain,
A little joy, a little strife,
And this is life.

A little work, a little play,
Some kind deed done each passing day,
A few good-byes, a setting sun—
And life is done.

—Nelson Weedon.

## "IF I HAD THIS OR THAT—"

When Abraham Lincoln was a lad
And lived in a hut in the wood,
No books, no lamp, no time he had,
And yet it is understood,
He trudged many miles to borrow a book,
The light of the flickering fire he took
And studied whenever he could.
And none of his friends ever heard him say,
In a self-excusing and hopeless way:
"If I had this or that, I could."

When Joan of Arc was a little maid,
Untutored, gentle, good,
And France was conquered and dismayed
By England's masterhood,
She had no wealth nor armament;
Alone with her faith, the little maid went
And freed her land as she could.
And nobody ever heard her say,
In a listless, longing, empty way:
"If I had this or that, I would."

When young James Watt sat by the fire
And watched the burning wood,
He saw the kettle's lid mount higher,
Observed and understood;
He had no need of a laboratory
To plan the great steam engine's glory;
He used his eyes as he could.
And he never once was heard to say,
In a shiftless, thriftless, futile way:
"If I had this or that, I would."

If now you will read your histories o'er
(As I earnestly think you should).
The fact will impress you more and more
In the lives of the great and good,
That they were those who never held back
For circumstances or material lack—
But arose and did what they could.
And never a one was heard to say,
In the weak, surrendering, doubting way:
"If I had this or that, I would."

---

McCroskey & Co. are the successors to Mr. Williams in the hardware business at Primghar, Iowa.

---

Austin & Rann is the new name of the business formerly conducted by C. C. Austin at Perry, Mich.

---

L. S. Frantz will continue the hardware and sporting goods business of Burley & Frantz at Park City, Mont.

---

## ABLE ASSISTANT TO C. W. GAUSE

Here is a snapshot of E. C. Anderson on the grounds of the Hotel Del Monte, while he was in attendance at the convention of Automobile Accessory Manufacturers and Jobbers. Mr. Anderson is comparatively a new member of the western trade, but a mighty promising one and one who is making many friends as he moves about over the territory. Certainly Mr Anderson could have no better introduction to the trade than his affiliation with C. W. Gause.

Mr. Gause is, of course, known from east to west as a veteran hardware man and masterly representative of worthy manufacturers. He received long training with the Simmons Hardware Co., and moving further west, he has ably represented in the West such manufacturers as the Buffum Tool Company, Bridgeport Hardware Company and others of no less importance.

Mr. Anderson is a native of Colorado, although he had his engineering training in the middle West. Besides his technical engineering studies, he has served some time as a banker and so he is qualified for his new work from the technical as well as the business point of view.

During the war, he served in the navy and it was as a naval cadet that he met Mr. Gause and became interested in the hardware business. With his release from the service, he took up his new work.

## NEW FACTORY SALES ORGANIZATION

Thayer & Bower is a new firm of sales representatives, yet only new in the combination, for both the individual partners are familiar figures in the hardware trade in the United States.

J. H. M. Thayer has been identified with the hardware business for the past twenty years in Boston, San Francisco and Los Angeles wholesale houses, in the capacity of salesman, sales manager and commercial manager. Fred B. Bower has also been associated with the Los Angeles jobbing trade for the last seventeen years, and his reputation for "straight shooting" and high business standards is unapproachable.

The headquarters of the company are at 845 Monadnock Bldg., San Francisco, and in Los Angeles at 320 Story Bldg. They will call on the wholesale trade only and are open to correspondence with manufacturers desiring representation in the western field.

---

F. H. Dresser has purchased the stock of Tilton & Tilton, Moline, Kansas, and will add to their lines of hardware, household furnishings, implements, vehicles, stoves, silverware and automobile accessories.

---

The Pope Hardware Co. has been incorporated at Monroe, La., by J. W. Pope, with a capital stock of $40,000. They will handle full lines of hardware, sporting goods, household goods and accessories.

## MODERN DITCHING IMPLEMENTS

There is every indication that the time will come when hardware dealers, instead of selling picks, shovels, horse scrapers, etc., for ditching work, will be selling pointed steel bars, sledge hammers, mauls and dynamite for drainage projects.

The reason for the change is that labor can no longer be employed, within reasonable cost limits, to wield the old implements. Modern conditions call for a method requiring infinitely less man-power. That means the method proved practicable by the army engineers while building cantonments.

Officials of drainage districts are especially active at this time in familiarizing themselves with ditch blasting methods. In many sections of the country, especially the southeast, they are calling on experts to show them how to keep their drainage work going with small crews of men—and dynamite to play the heavy part.

At Green Cove Springs, Clay Co., Fla., recently the drainage district men had a practical blaster show them how to ditch with dynamite. He made two test shots for their enlightenment; one a 40 foot section, five feet deep, 18 feet wide at top and ten feet wide at bottom, and the other 100 feet long, 4 feet deep, 8 feet wide at top and sloping to 2 feet wide at bottom.

The method used on the big ditch was as follows: Soil was wet sand and muck. Three parallel rows of 2-inch holes, 36 inches between rows and 30 inches between holes in the row were punched in the ground. Two pounds of 40 per cent ammonia dynamite was the charge in each hole. Each hole contained an electric blasting cap. The charges were wired and fired with a blasting machine.

For the smaller ditch but one row of holes was put down, spaced 30 inches apart and each loaded with 1½ pounds of 40 per cent dynamite. These charges were also fired electrically.

The large ditch cost for explosives about seventy-three cents per lineal foot; the smaller one about twenty cents.

After the tests the dealer on the ground immediately took orders for a ton of dynamite, 2000 caps, 2000 electric caps and 2000 feet of fuse. And that was only a beginning, as this drainage district has a large amount of ditching to do.

This is going to be a very profitable field for dealers in the near future.

## SIMONDS ESTABLISHES BRITISH SAW CO.

Simonds Manufacturing Company, "The Saw Makers" of Fitchburg, Mass., and Chicago, Ill., have just secured a charter and established a new company in Great Britain, to be known as Simonds Saws, Limited. An office and shop has been opened at 53 Bayham, Camdentown, London, N. W., where a full line of Simonds Saw Steel Products as is demanded in Great Britain will be carried. The shop will provide for maintenance and repairs of saws, machine knives and other edge tools produced by the Simonds Company.

Guy A. Eaves, formerly connected with the Fitchburg plant of the company, has assumed the duties as office manager, and Leon E. Wilbur, a Simonds man, who has covered the Great Britain territory since his discharge from the army in France, will be associated with him.

The Simonds Manufacturing Company now maintains plants in Fitchburg, Mass., Chicago, Ill., Montreal, Canada, and a steel mill at Lockport, N. Y., where the steel used in the manufacture of Simonds Saw Steel Products is made. In addition to the new British branch, the company maintains twelve branch houses, located throughout the United States and Canada.

## WHAT CAN A SELLER DO AFTER HE MAKES ONE BAD DELIVERY?

(Copyright by Elton J. Buckley)

This letter from Denver ought to be of interest to everybody:

Please give your views on this question. In March we sold a regular customer of our house 100 cases of —— which we signed a guarantee should be up to certain specifications of quality. About the time their order was going through our plant we were having trouble with labor, and some of these goods were off, that we admit. They were good and would have given satisfaction, but were not quite up to the specifications.

We thought under the circumstances the customer would be willing to overlook the fact that the quality was a little lacking, so we sent the goods forward. We did not hear for about a week, and so thought everything was all right, when we got a letter stating the firm had just inspected the shipment and found it not up to contract, and rejecting for this reason. We had some correspondence in which we agreed to make an allowance, but this was refused, and we finally had to agree to take the goods back. This we did. We immediately shipped another lot which we knew was up to specifications, but the customer refused to take these in, on the ground that the deal was off on account of our having not made a good delivery the first time. Since the first delivery the market has gone off about 20 cents a case, and that we believed was the reason why the second lot was turned down. We therefore offered to make an allowance, but that was rejected, and we had to bring the goods back.

Now, we are desirous of knowing whether we did not have a legal chance to make a second delivery, which we knew would be all right. If we have not of course we stand to lose money by the transaction.

E. R. B. & SON.

The question therefore is, how many whacks has a seller at delivery? When he has fallen down once—I mean when he admits that he has fallen down, as in the above case—can he come back with another delivery, and if he falls down on that, come a third time and so on indefinitely until he pulls through? Where is the line to be drawn, in other words?

It seems to me that the question answers itself. If you give the seller a second chance, there is no point where you could draw the line. To be logical, you would have to go on and on with no end until a good delivery was made.

No, the seller has one chance and no more. He must stand or fall on that. If he makes a bad delivery the first time, the buyer has a legal option to give him another trial, which is often done where the market hasn't changed, or to call the deal off. The buyer in the case submitted was not only wholly within his rights when he refused the second delivery, but he would have been a fool to accept it when the market had declined.

Several cases similar to this have recently come under my own notice. They are about identical in their facts with the case above, except that the buyers in my cases had discounted their bills before discovering that the goods were not up to specifications. In these cases the buyers rejected and demanded their money back. Here, too, the market had declined. The sellers all came back with a proposition to let them try again on delivery, and in one case the buyer for special reasons did that, but mostly the buyers, of course, refused and continued to demand the refunding of their money. Eventually this refund was made, but in every case the seller considered himself squeezed and seemed to feel that he had a legal right to make a second effort at a good delivery, and that if he had gone to law the court would have supported him.

One of these cases had rather a humorous turn. When the first delivery fell down the market had declined, as stated. When the seller demanded that he be allowed to make another delivery, he was refused for obvious reasons. He therefore did nothing—neither refunded the money or tendered new goods. Later the market advanced, and when it reached a certain point, the buyer changed his demand to one for goods instead of money, at which the seller demurred. And neither could see that his final position was in the least inconsistent with his first one.

## PROTECTS DRIVER FROM RAIN AND SUN

Rain-Sun Vision Shields are fast becoming standard equipment for many cars in the West, and the up-to-date accessory department will do well to inquire into this accessory for the convenience of the motor driver.

The Rain-Sun Vision Shield Company at Los Angeles manufacture both glass and metal shields. The advantage of the metal shield is the rain groove at the base of the shield, which acts as a gutter for the rain. Made of high grade automobile steel, the shield is steady and permanent and will not rattle. It is made to adjust to any car, either open or closed, and its angle may be adjusted to the sun.

Carl L. Gardner and Al. Garside are the inventors, and have joint charge of production. Both are at work constantly, in active management of the factory, and give their personal attention to the problems which the shield and its distribution present.

The John T. Rowntree Company are the sales agents for the shield, and have various offices throughout the West. East of the Rocky Mountains, C. N. & F. W. Jonas are the sales agents for the Rain-Sun Vision Shield. These two sales organizations are surely a guarantee for the shield and its makers.

## STERLING TIRE CO.'S TWICE CHAMPION BASEBALL TEAM

The Sterling Tire Baseball Team has for the second consecutive year won the pennant in the Rubber Industries Athletic League. The standing of the clubs at the end of the season was:

| | W. | L. |
|---|---|---|
| Sterling Tires | 14 | 2 |
| U. S. Rubbers | 11 | 4 |
| Ajax Rubbers | 6 | 7 |
| Goodyear Tires | 2 | 12 |
| Keystone Tires | 2 | 6 |
| Kelly-Springfields | 1 | 3 |

This second victory is especially unusual, since the Sterling Tire Corporation is probably the smallest of the organizations represented in the league.

The players for the champions were all recruited from the factory. None of them had played much more than the normal "open lot" games. The cup (which was donated by the India Rubber World Publishing Co.) must be won three times. Manager Rourke of the Sterling team announces that his tribe will be out for blood and the third leg of the cup next season.

## DEATH OF JAMES F. FAILING

Surely we voice the united sentiment of the trade in the Northwest in our sorrow at the passing of James F. Failing, president of the Failing-McCalman Co., at Portland, and one of the real pioneer merchants of Portland.

Mr. Failing moved to Portland from New York in 1853, where he joined his father, Josiah Failing, who had settled in Portland two years before and established a general mercantile store, known as J. Failing & Co. Mr. Failing entered the business with his father and brother, Henry Failing, in 1860. Becoming a member of the firm of Corbett, Failing & Company in 1871, he was made president of Corbett, Failing & Robertson Company in 1893.

When the Failing-McCalman Co. took over the old business in 1906, he remained as president. At the time of his death he was completing his sixtieth year of his active connection with the hardware business. In 1900 he retired, leaving his sons to represent his interest, but he remained president of the company until his death.

Mr. Failing was an important figure in banking circles, as well as the hardware trade, for he had been for over forty-two years a director in the First National Bank of Portland. He was also prominent in the work of the Baptist church in the city and state.

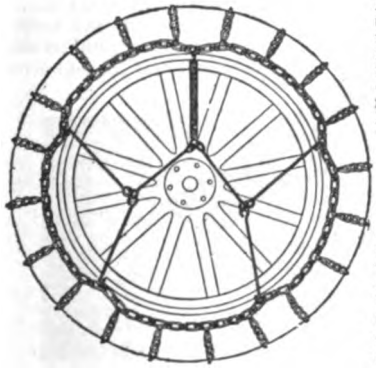
The business will continue under the active management of Adrian McCalman and Mr. Failing's three sons.

---

Stewart Moore Hardware Co., composed of F. A. Stewart and W. A. Moore, Puyallup, Washington, are materially adding to their stock of hardware, implements, sporting goods, automobile accessories, housefurnishings, etc.

---

The Imperial Valley Hardware Co. stockholders have voted upon an increase in the capital stock from $300,000 to $1,000,000. The tremendous increase in the business of the company's seven stores necessitates increased stock in all stores.



STERLING TIRE CO. BASEBALL TEAM

Standing, left to right—Brameld, 2nd base; Davis, pitcher; Rourke, 1st base, captain and manager; Mr. O. Basten, vice president of Sterling Tire Corporation; Hess, 3rd base; Dittrich, center field; Jackson, left field. Seated, left to right—Marquard, outfield; White, right field; Botto, mascot; Roach, catcher; Calendriello, shortstop.

## THE 'ORN OF THE 'UNTSMAN IS 'EARD ON THE 'ILL

The Biggs Kurtz Hardware & Implement Co., retail distributors at Montrose, Colorado, have taken the lead in their territory in introducing new methods and keeping up with times.

Here are two window displays which were used to great advantage during the hunting season. John B. Ross is the window trimmer for the company, and these two windows are tributes to his ingenuity, ability and his knowledge of the trade and of merchandising psychology.

Notice that in the hunting window, featuring the deer, every device is used in stirring up the sporting blood of the passerby without forcing on him a great array of guns, ammunition and other supplies.

This display window is based on the theory that the creation of a demand and the desire to buy is more important than supplying the demand and showing the articles. At least it is far more important when the show window is concerned.

Mr. Ross reports that seven Montrose sportsmen went out the second day of the hunting season and returned with seven bucks, which we believe speaks for the thoroughbred sportsmanship of the community, as well as for the enterprise of the Biggs Kurtz Hardware & Implement Co..

---

R. E. Carruthers of the Astoria Hardware Co. was recently one of the two representatives of this city at the convention of the Rotary Clubs of the Northwest at Walla Walla, Washington.

---

Harvey Avery, E. C. Atkins & Co.'s oldest salesman, eighty-one years young, very nearly lost his life recently when he ascended in an aeroplane at a county fair to distribute advertising matter. The pilot tried to loop the loop, but was not high enough from the ground, and they crashed into the earth, hurting both men severely.

---

J. Sand & Son, Detroit, Mich., report that they have had the best year's business they have ever experienced. They have enlarged their plant, and are planning for a busy year in 1921. Their products are meeting with much favor at the hands of the entire trade, as well as being most favorably received by mechanics generally.

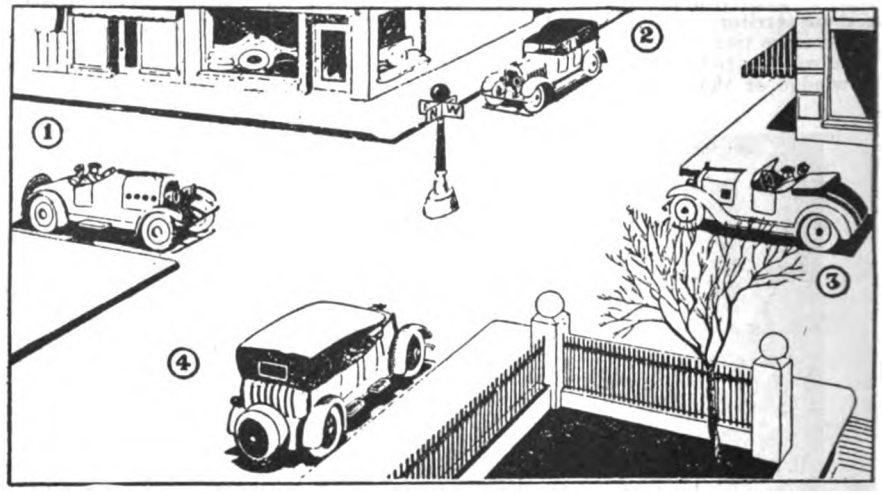
## BENJAMIN TWO-WAY BROADSIDE

The Benjamin Electric Mfg. Co., through its advertising department, has made great strides throughout the fall in cooperating with dealers and distributors in pushing the Benjamin No. "92" Two-Way Plug.

Every few weeks suggestions and valuable material are mailed to distributors and dealers in Benjamin products. These include model window trims, counter display boards, cut-outs, suggestions for local advertising and trade letters of an inspirational and informing nature.

The latest feature is a four color advertisement in four of the leading national journals, showing the plug in actual colors. Merchants are urged to take full advantage of this big advertising and tie their sales to it.

---



The Valley Hardware & Implement Co. has taken over the furniture stock of Kellso & Goble, Grandview, Washington, which will be consolidated with its hardware stock.

## WHO HAS THE RIGHT OF WAY?

The following illustration may be useful in impressing the users of motors, the right-of-way in driving and thereby avoiding accidents:

Reports from the Interstate Commerce Commission show that in 1918 there were 2,270 automobile accidents in the grade crossings in the United States. A total of 1,131 people were killed in these accidents. In 1919 approximately 10,000 persons were killed in automobile accidents in the United States.

**Right of Way**—In the above diagram, No. 1 has the right of way over No. 2; No. 2 has the right of way over No. 3; No. 3 has the right of way over No. 4; No. 4 has the right of way over No. 1. This is in accordance with the provisions of the automobile laws.

Every motor vehicle under the laws should be equipped with good brakes, suitable signal service and anti-glare devices, or lenses, and other safety appliances, and always keep in mind that the vehicles approaching from the right have the right of way.

—The Leader.

---

Many young fellows who formerly refused to recognize work even when introduced to it was forced in the army to labor from 5 a. m. to 8 p. m. and discovered that one could survive if called upon in commercial or industrial pursuits to labor from 8 a. m. to 5 p. m. Good idea here. If we all would work even eight-fifteenths as hard in peace times as we were willing to work in war times, many production and distribution problems would solve themselves. Less talk and more sweat, as Hoover inelegantly but most effectively says.

---

There are some things that a committee can do that an individual cannot do. But, in a great number of instances, the average committee is a body of men who take a week to do what one good man could do in an hour.

---

## "QUICK-LITE STUNTS" FOR COLEMAN DEALERS

A "Quick-Lite Stunt" book is now being sent by The Coleman Lamp Company of Wichita, Kansas, to all dealers. This first edition has sixteen pages chock brim full of helpful ideas and stunts used by hardware dealers all over the country to promote sales.

Merchants tell how they double and treble their sales of nails, rope, furniture, etc., how they attract buyers to their stores, how they fix their window displays and how they use other profit producing methods.

This Stunt Book is but the first of a series promised by the Coleman Lamp Company. The next one will be entitled "Quick-Lite Trims" and will deal almost entirely with attractive window displays by the hardware dealer and for the hardware dealer. Another one will be "Quick-Lite Ads" and will show live, snappy, business-getting advertisements exploiting various products, written by hardware merchants.

## THE KNOCK THAT BOOSTED

A merchant in a southwestern city has just sold a gas range to a woman he had never seen in his store before. Out of curiosity he thought he would ask her what brought her to his store.

The customer replied: "I started downtown this morning to buy this brand of range because my mother had one and she said it was the best. I knew the name of the brand, but did not know who sold it. I went into another store and asked for it.

"That man said he did not carry it because it was no good. He said I could only get them at stores like this one—he mentioned your name. I thanked him for saving me from running around any more. So I came right here and bought what I wanted."

---

Defeat is often a spur to victory.

---

## PEXTO CENTENNIAL HAND BOOK

The Peck, Stowe & Wilcox Company have just mailed out to the trade hand book No. 20A. Centennial Edition, whose 400 pages are devoted to a complete description of their machines and tools for metal workers.

This hand book is in no respect a catalogue. It is a complete manual for the sheet metal worker. It contains tables for his use, general information along the lines of sheet metal, the history of the hundred years of development of Peck, Stow & Wilcox, as well as a description and illustration of all Peck, Stow & Wilcox tools.

Surely no sheet metal worker will want to be without this volume and surely every merchant numbers the sheet metal workers among his customers. Merchants will cement an everlasting friendship if they pass such a volume along to their customers.

## *"You're the Doctor, Bill"*

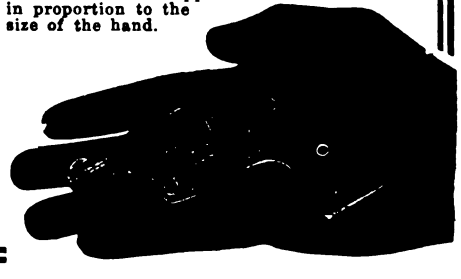
HOW much of your trade relies upon your judgment when they come to purchase automobile supplies? Quite a goodly number, we would suppose, for they have dealt with you a long time. So when you recommend a

## "HEXALL" Socket Wrench

**Trademark Reg. U. S. Pat. Off.**

they naturally take it for granted that you are selling them the most dependable, most satisfactory socket wrench on the market.

This is their attitude: "You won't sell me something you wouldn't buy yourself, so if you say it's O. K., I'm satisfied. **You're the Doctor, Bill.**"



**Faith like that must be maintained.** When you take down a "HEXALL" Set from your shelf and hand it over the counter—you can look your man squarely in the eye, knowing that you are giving him the **best socket wrench in the world**—conceded as such by a constantly increasing number of motorists, motor-boat owners, aeroplane enthusiasts who find in "HEXALL" every requirement of the perfect socket wrench. Besides, it's guaranteed:

***"Break Any Sedgley Wrench and We Repair It — No Charge"***

The "HEXALL" Line—seven sets—a "**HEXALL**" for every need—carries an attractive profit; it is a consistent "repeater"—a distinct asset to any hardware or sporting goods store. **Be sure it's a "HEXALL."**

Always keep a display of the "BABY" Hammerless Revolver on the counter and in the window. It's the smallest "death-dealer" on the market. Shoots 6 .22 caliber rimfire cartridges. Measures only 4 inches from muzzle to stock; weighs 6 oz.

"BABY"—as it appears in proportion to the size of the hand.

## WE RECOMMEND HOME CALISTHENICS

The cheapest and simplest gymnasium in the world, and one that will exercise every bone and muscle in the body and discover for you many new ones, is a flat piece of steel notched on one side, fitting tightly in a wooden frame, and, after being greased on both sides, rubbed into a stick of wood laid lengthwise of a sawbuck.

---

Facts to the mind are a good deal like food to the body—they furnish the genuine nourishment without which weakness is bound to develop.

---

Mistakes are among the most valuable equipments of the successful man—if there are no duplicates!

---

## "SANDY" PLUMMER IN NEW QUARTERS

Sanford Plummer, one of the deans among manufacturers' agents, has moved his offices into new quarters, 502 Atlas Building, Mission and Second Streets, San Francisco. Mr. Plummer has been known to the trade for years, representing such institutions as the Reading Hardware Co., Gilbert & Bennett and Malin & Co., at his office, 111 New Montgomery Street.

For the last year or two "Sandy" Plummer has not been up to snuff, and has spent a great deal of time at his home recovering his health. However, we are mighty glad to join with his good friends in knowing that he is once more his old self again, and doing business in his old style.

## LAWS OF NATURE

Nothing in nature is permanent; everything is constantly changing. Day changes into night, fair weather into foul, plants and animals die and decay, and even the solid rocks gradually wear away into soil and sand. These changes do not occur by chance, but each is the result of some definite law of nature.

After more than fifty years of experience, guided by innumerable records, and tests under all conditions and climates, the Dixon Company adheres to the belief that what a protective paint will do, and what it costs to do it, are the real considerations in the value of a protective paint. Fifty years of experience and watchful care in keeping accurate records of results warrants this company in proclaiming Dixon's Silica-Graphite Paint the unequaled protective paint for all metal or wood work. To its enduring quality is added its fine appearance. Made in four colors—black, natural (dark gray), olive green and dark red.

## HAPPY THOUGHT LIVERY, $6

Scene: Small town hotel, worried salesman at writing desk. Before him a small pile of money and a sheet containing a column of expense account figures.

He adds and frowns. Counts money and frowns again. Thinks hard. Frowns harder. Thinks harder. Frown disappears. Smiles. Leans back in chair.

Holds left hand out in front of him, and says, "Giddap, hoss, giddap." Holds attitude a minute. Then, "Whoa, hoss."

Adds to column of figures:

"Livery $6.00."

## ORIENTAL GLIMPSES THROUGH A VETERAN EYE

1. The Morgan party stops at a gate in the wall that divides the north from the south of China, at an elevation of about 2000 feet.

2. Natives bathing in the Yangtse River, Hankow, China.

3. Mrs. Morgan, the local representative, and Mr. Morgan (with the camera) start for Hankow, China, from the interior.

Through the kind cooperation of Earl R. Morgan, we are able to publish these views of the Orient as it appears to an American traveling representative. Mr. Morgan is director of sales for China and the Philippines for the American Hardware & Steel Products Co., of Seattle, Washington.

For many years Mr. Morgan has traveled through the Orient for various American hardware interests and he is a veteran in the Chinese and Oriental trade. When last heard from he and Mrs. Morgan had just returned from the interior of China, where he reported that they met with some most amusing experiences, being at times between the lines of the different Chinese political factions in martial convention assembled.

The faction in China that can get the most money to hire the greater number of soldiers wins the political contest after a little skirmish.

Business has not been by any means good in the Orient, there having been many failures due to the unsettled exchange conditions, as well as the financial crisis in Japan. However. Mr. Morgan is happy and prosperous, whatever way the wind blows, as is evidenced by these snapshots.

## ADVANCE ON STEVENS GOODS

The J. Stevens Arms Company has announced an increase in their selling prices on practically their entire line. This represents an increase of 10 per cent on some models and a somewhat higher percentage of increase on other models. This step was made necessary owing to the continually increasing costs of material.

The Stevens Arms Company have orders on their books covering their production for many months, and it was not in accordance with the conservative policies of the company to accept orders for deliveries months in advance, when raw materials particularly were continuing an upward trend.

Charles G. Spencer of St. Louis, Mo., recently won the professional trapshooting championship. Spencer is a member of the Winchester Shooting Team and is shooting the new ventilated rib trapgun. He recently broke 410 targets in succession in one shoot.

## SAY SAMMIE CARS SELL ON SIGHT

It is the claim of the Western Toy Company that Sammie Cars sell on sight. Those progressive and thoughtful hardware men who have taken up the toy line as a feature of their business will probably readily agree with these manufacturers. At any rate, it is our advice to the hardware trade to look into the proposition of handling toys if toys are not already in their stock.

One of the first toys to be investigated is the Sammie Car. This is an original and unique handcar for children, manufactured by the Western Toy Company at Berkeley, California, and Niles, Michigan. From the dealer's point of view it is a new idea and therefore easy to sell. Children take up the idea quickly and spread the good word around the neighborhood, so that one sale means several.

Since Sammie Cars are easily converted to any size from 2 to 8 years by adjusting the seat, the merchant is not in danger of becoming overstocked on odd sizes. It is proposed to advertise Sammie Cars nationally and the merchant who investigates now and has a stock when the rush comes will find himself fortunate in being able to fill the holiday demand. They are packed six in a box, knocked down, and are easy to set up. If your jobber cannot supply you, the Western Toy Company, either at Berkeley, California, or Niles, Michigan, will be pleased to handle any inquiries or orders.

C. M. THOMPSON
Who has the distinction of buying for the southwesterlymost hardware house.

KENNETH McKENZIE
Sales Manager and Chief-of-Staff of the Western Hardware and Metal Co.

## AT THE SOUTHWEST CORNER

The Western Metal Supply Co., jobbers at San Diego since 1888, enjoy the distinction of being the southwestern-most jobbing house in the United States. A full line, including iron, steel, heavy hardware, plumbing fittings, valves, irrigation supplies, tools, household goods, automobile accessories, etc., are carried by this house. They not only supply the trade at San Diego, but also the adjacent territory extending into Arizona. They also do considerable shipping to Lower California and the west coast of Mexico.

The newest addition to the western family is C. M. Thompson. Mr. Thompson has had many years' experience with the Whiton Hardware Company at Seattle, Washington. He entered the hardware business as a boy in Minnesota.

Mr. Thompson has taken over the buying for all lines except plumbing, and Kenneth McKenzie, former buyer, has become general sales manager for the company.

This is one of the few wholesale institutions in the United States with a house large enough to hold its wares. When a new building was constructed for the company several years ago, they built for the future, with the result that at the present time they have a fireproof building, four stories high and especially reinforced for their purposes, covering a square block and with plenty of floor space, so that their goods may be comfortably and safely housed and easily available for handling. In the near future we hope to publish photographs of the company's plant and officers.

## RUBBER CORPORATION ENLARGING BRANCHES

So great has been the increase in the business and activities of the Rubber Corporation of America since the consolidation of the Sterling Tire Corporation and the Empire Rubber & Tire Co. into this new organization that it has been necessary to enlarge quarters at the general offices of the company, as well as at the various branches. The latest announcement comes from Kansas City, where the corporation has found it necessary to move from 21st and Grand Avenues to 717-19 Wyandotte Street.

The manufacturing companies remain separate and distinct, as before, there having been no change in the controlling interests of either. The sales organization is combined with general offices at 240 W. 55th Street, New York, and branches at Boston, New York, Philadelphia, Pittsburgh, Buffalo, Chicago, Kansas City, Atlanta and San Francisco.

The Sterling branches in the following cities have been taken over by the former managers, who are now distributors for the Rubber Corporation of America; Newark, Paterson, New Jersey City, Philadelphia, Syracuse, Cleveland, Detroit, Indianapolis and Washington.

---

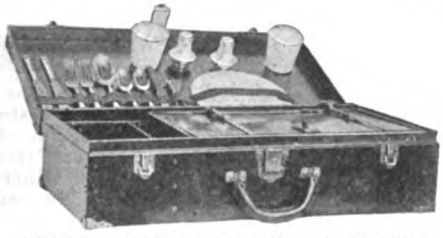
Surber's Hardware has succeeded Spitler & Surber at Francesville, Indiana.

## SUPERIOR WEST BEND ALUMINUM

Where is the hardware merchant who does not include in his household goods department an aluminum line, thus taking advantage of the general growth in favor of aluminum goods and utensils among housewives in general?

In this connection, and among the other standard and reliable lines of aluminum goods is that of the West Bend Aluminum Co., West Bend, Wisconsin, announced elsewhere in this issue. The company can conscientiously assure the trade that its line of aluminum ware represents the highest development in modern cooking utensils, and that the merchant who handles it has the utmost measure of selling value at his disposal.

At any rate our readers may be assured that this line will bear investigating, which is all that the company and its representatives desire. A copy of catalog No. 14 will gladly be sent upon request from the company's main offices, or from the western representatives of the company, A. L. Groeschel, San Francisco, and the W. M. Clark Co., Portland.



---

E. L. Peterson, president of the John Forrester Rifle Club, of Pittsburgh, Pa., reports that he has shot 20,000 rounds of ammunition with the .22 caliber Winchester musket NRA model, which he purchased on September 21, 1917. It is still in perfect condition.

## DO YOU EVER FEEL ABUSED?

When Abraham Lincoln was a young man he ran for the legislature in Illinois, and was badly swamped.

He next entered business, failed and spent 17 years of his life paying up the debts of a worthless partner.

He was in love with a beautiful young woman to whom he became engaged—then she died.

Entering politics again, he ran for congress, and was badly defeated.

He then tried to get an appointment of the U. S. Land Office, but failed.

He became a candidate for the U. S. Senate, and was badly defeated.

In 1856 he became a candidate for the vice presidency, and was again defeated.

One failure after another—bad failures—great setbacks. In the face of all this he eventually became one of the country's greatest men. When you think of a series of setbacks like this, doesn't it make you feel kind of small to become discouraged, just because you think you are having a hard time in life?

---

## "BLAME IT ON THE TIRE"

He didn't pump it full enough, though all the air is free,
He left it soft and spongy-like, and scooted on with glee,
He skidded and he gridded and whooped through dust and mire,
And when it burst
He cursed and cursed,
And blamed it on the tire.

He drove it on the street car tracks with confidence superb,
He scraped it on the lamp-posts and he scraped it on the curb,
He slammed it and he jammed it any way he might desire,
And when it popped,
Right out he hopped,
And blamed it on the tire.

He cut it on some broken glass, but said that didn't hurt,
He kept right on through sand and mud and filled the cut with dirt;
It spotted there and rotted there and soon he howled in ire,
When up it blew,
He blew up too,
And blamed it on the tire.

He put on chains that ground and chewed and gouged into the tread,
He knew his wheels were out of line, "But what of that?" he said.
He whizzed along and sizzed along, he picked up nails and wire,
And when it banged,
His fists he whanged,
And blamed it on the tire.

Who is this man? Go ask the boys who meet him every day;
Go ask the boys who have to hear the things he has to say.
He bores in and he roars in with words of angry fire,
Though he's to blame,
It's all the same—
He blames it on the tire.

—Wilbur D. Nesbit.

---

Four of the five small bore rifle events in the recent Sea Girt tournament were won with Winchester Bolt Action Magazine rifles. The most important of these matches was won by a team comprised of Captain W. H. Richard, his son Virgil, Captain R. O. Miller. U. S. A., and Captain George W. Chesley. The combined score of the team was 865.

## H. L. BOYD—SOUTHERN CALIFORNIA SECRETARY

At its recent annual convention, the Southern California Hardware & Implement Association, at Riverside, the association practically proved its strength by becoming a separate and independent association.

H. L. Boyd has been elected secretary of the Southern California Association, and will devote his time to his secretarial duties.

Under the new arrangement, the secretary of the Northern California Association will always be present at the annual meeting of the Southern California Association.

During the last year the Southern California Association has added 24 new members to its membership, making a 10 per cent increase in membership. Meetings are held every month in Los Angeles, in addition to the semi-annual convention.

Due to his new connection with the Otto Reiman Co. in the electrical field at Los Angeles, the hitherto ever-faithful Glen Marks tendered his resignation to the association. He has been faithful in service for many years, and has been a most efficient, active secretary. He is a partner in the new business, and will be forced to devote all of his time to private interests.

## "PRESS THE BUTTON TO SAFETY"

"Press the button" is the watchword adopted by the Walker Motor Car Specialties Co., at Oakland, California, in connection with their Leader Auto Lock, which fits on the steering post of any car.

In pressing the button of this safety lock the motor is shut off and the car is locked. The operator never forgets to lock his car, thus the ignition circuit is broken and the front wheels are locked at an angle, so that it is impossible to move the car or tow it away.

The Leader Auto Lock can be installed without boring holes into the steering wheel or marring the car, and can be installed on any make of car that has spark or gas control mechanism on the steering wheel.

The officers of the company are Norman De Vaux, president; R. C. Durant, first vice president; G. C. Walker, second vice president. The headquarters of the company are at 301 13th Street, Oakland, California.

Peter T. Peterson has purchased the S. S. Patrick furniture and hardware business at Wenatchee, Washington. Mr. Peterson was formerly a merchant of Mansfield.

## THE HARDWARE DEALER SHOULD HOLLER FOR HELP

Dealers in hardware, implements and many other lines sell a good many things with which they are not thoroughly familiar. This is not surprising. No one man could become wholly practical in using and adjusting the many articles that go to make up a complete hardware stock.

Yet a dealer frequently loses trade and loses chances to increase trade because customers sometimes fail to get results from commodities he sells them, which they do not handle just right to produce desired results and which the dealer himself cannot tell them how to use in any more than a general way.

Fortunately, a great many manufacturers selling goods to the hardware and implement trades maintain service departments, including demonstrators, and if dealers would call on these service men for help when one of their customers has trouble with some specialty he has bought, oftentimes the customer could be changed from a knocker into a booster, and increased trade for the dealer would result.

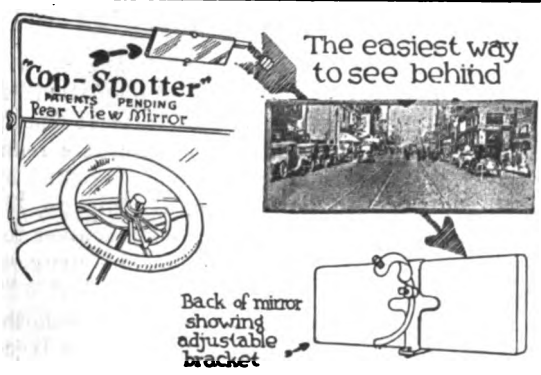
Dynamite is a commodity most hardware and some implement dealers sell. Few dealers are practical blasters. When their customers fail to get satisfactory results with the explosive the dealer usually throws up his hands, pleads ignorance and not only does his customer fail to buy any more dynamite, but knocks it to his neighbors who are then also influenced not to buy any.

A case of this kind occurred at Fort Myers, Fla., recently. The Franklin Hardware Company had sold the Ft. Myers Grove Company dynamite for clearing. The stumps looked easy to blast, but really had a peculiar root formation that made them very difficult. A stump of only eight or ten inches in diameter would have a lateral root system spreading out underground ten to twenty feet, each main root having a great many small roots shooting out from it, this root system anchoring the little stump most surprisingly fast.

The grove people had succeeded only in splitting the stumps and had concluded dynamite was a failure for clearing work. The Franklin Hardware Company, at this critical point, hollered for help from the powder company's service men.

The demonstrator tried several methods on the unusual stumps. After blasting a dozen he hit on the right way to get them out cleanly. A large customer was saved for the hardware company. Wasn't that more sensible from a business standpoint than to have agreed with the dissatisfied customer that dynamite probably wasn't any good for that kind of work?

As a proof that it was, the dealer has sold the customer dynamite, fuse and caps with which to plant eight hundred acres of trees in blasted holes. That's some considerable item of trade, and more is coming as they are now using explosives successfully in their clearing and planting.



## STILLETTO CHRISTMAS SUGGESTION BOOK

Baker, Hamilton & Pacific Co. have mailed to their customers an 80 page Christmas catalog, including pictures, descriptions and prices on all the goods of which there is a liberal supply in stock, and appropriate for Christmas sale. The items represent every department.

The book is appropriately printed in green ink, carrying the holiday color scheme throughout, and was especially edited and published for this holiday season. The stock was carefully checked over.

Any merchant who has not yet received a copy of this booklet would do well to apply direct to the company; headquarters are at San Francisco. He will find it a ready and handy incentive to increase his business and a suggestive guide to the items in his stock, or which should be in his stock, for particular featuring during the holiday season.

## B. & D. MACHINE BLOWER

The Black & Decker Mfg. Co. are now making up their No. 46 Electric Compressor Portable Automatic Tank outfit especially equipped with reducing valve, hose and blow gun for use in blowing out the dust from electrice motors and other delicate machinery.

Instead of using heavy, clumsy bellows, the Black & Decker portable compressor may be especially equipped for this purpose, while it is not in use inflating tires or supplying air for other purposes. This apparatus is used largely in machine shops, garages, etc., to keep machinery clean, and for cleaning gasoline engines.

## IMPROVEMENTS IN CANTEENS

The Woolwine Metal Products Company of Los Angeles has come out with a number of improvements on the usual run of canteens and automobile service units, of particular interest to the trade.

The canteens are all that careful selection of material and the best of workmanship can make them, double seamed and soldered, round cornered and air tested. The greatest improvement, however, in the srvice units is in the carrier, which is all steel and grips the canteens so tightly that they cannot rattle and at the same time are quickly and easily removed.

There are two complete lines of "Bear Brand" service units, those with faucets and spouts, and those without; four combinations in each. There is a growing demand for the former, which is called the "First Aid" outfit.

The "Bear Brand" standard, blanket covered, round canteens appear to be a great improvement in that they do away with the idea of the strap going entirely around the canteen through metal loops. The strap is fastened to a ring which is riveted to the body of the canteen at just the proper point to give perfect balance.

The Omer Cox organization is distributing them and is adhering strictly to their accustomed policy of selling through jobbers only.

## IVORY HANDLE CO.'S CATALOG

The Ivory Handle Company of Hopo, Arkansas, has just published a most attractive and complete catalog, illustrating and describing the various handles comprising its lines.

The handles are made from best selected hickory, and the greater portion are rived or split out by hand and are made with the grain in the same way as though they were shaved or finished by hand. They are highly polished and have a hard wax finish.

## HOW THE VICTIM IN ONE CASE MIGHT HAVE ESCAPED

(Copyright by Elton J. Buckley)

Several weeks ago, in an article entitled "A Retailer Who Was a Victim of a Well-Known Legal Principle," I related the case of a retail druggist who went into a scheme worked by the Partin Manufacturing Co., of Chicago, Ill., to hold a "business bringing" contest over the most popular girl in the town. The druggist signed a contract to use the scheme and with the contract he signed some promissory notes. Later it developed that the scheme was a fraud which had been denounced by the Post Office Department; that the Partin Manufacturing Co. was crooked, and that the druggist had simply been taken in. "I'll just refuse to pay the notes when they come due," he said to himself, but when they came due it appeared that they were in the hands of the "innocent third party holder" who had acquired them for value without notice of the fraud," and the druggist was obliged to pay them. There were six of them, each one for $150. The court held that notwithstanding the scheme was a thorough fake, the druggist must still pay the notes, because they seemed "to have been transferred to and accepted by the Desbress Co. (the innocent third party) in an apparently legitimate transaction," and that that transfer "made them, under the law, immune from attack."

A Colorado Springs, Colo., correspondent who read that article in a Western paper writes as follows:

What would have been the effect if party giving notes had written across the face of them, "This note is not transferable"?

Tell us about it in some future issue, not just necessarily in answer to this question, but to cover the question in effect on a note as so written.

I never fail to read your articles; they are always interesting and helpful, yet I never have had any court troubles.

Yours truly,
JNO. W. GARRETT.

Simply to write across the face of a note, "This note is not transferable," would not serve the purpose. In order to safeguard the usefulness of negotiable paper to the limit, the law resolves most doubts in favor of negotiability. The uniform act on negotiable paper, which is in force in most States, provides that even lack of a date, or of a place where payable, or the inclusion of a confession of judgment, or a waiver of exemption, or an agreement to sell securities if the note is not paid, will not make a note non-negotiable. In spite of these defects or additions it is still negotiable.

Perhaps I had better explain what I mean by "negotiable." It means capable of being passed from hand to hand, like money, in such a way that the note or check is worth its full face value in the hands of a third party, in spite of defenses which might be raised against it between the original parties.

Therefore, to make a note non-negotiable—in other words, to keep it in the hands of the original holder so that your defenses, if there are any, can't be taken from you—some very specific condition must appear on the face of the note. There are many cases which decide that it is not enough to write in it "this note is given on condition." The condition must be written in, in such a way as to clearly inform third parties who might desire to take the note, that its payment will be on condition.

For instance, it would be sufficient to write on the face of the note, "This note is not to be paid unless," and then follow with the condition. Or "this note is to be paid when the amount of it is realized from sales, otherwise to be null and void." Or "the maker of this note reserves the option to return goods in lieu of payment." Or words reciting a warranty of the goods covered by the note, and providing that the note should not be paid until and unless that warranty is fulfilled. Or providing for a reduction in the amount of the note if the payee fails to deliver certain goods. Or providing that it shall not be payable if the maker sells a certain quantity of goods by the date of maturity. Or "this note is to be payable solely out of certain increased profits to be derived from such and such a thing, and if sufficient profits are not so derived, the note shall be paid pro rata." Or "subject to the terms of a contract entered into this day between the parties."

Practically all of the above phrases have been written by somebody across the face of promissory notes, obviously for the purpose of protecting the maker against the loss of his defenses, and have been sustained by the courts as creating non-negotiability; that is, they accomplished the purpose.

Of course, it would not do to litter all promissory notes up with conditions across their face. The purpose of negotiable paper is to allow it to pass from hand to hand more or less like money. In business this is a very useful purpose, and in most cases it should not be disturbed. But when a business man is asked to sign a note for something that he hasn't gotten yet, and may not get, or get right; or is asked to sign a note in some situation wherein by the time the note is due, he may have a good defense against its payment, he should always protect himself against being mulcted in the way I have described. And he always can protect himself. For instance, many of these "business bringing" schemes which inveigle a business man into signing notes guarantee a certain increase in the user's business. In such a case the man who signs the note should write across its face, "This note shall be payable only if such and such a contest increases my business 25 per cent, as guaranteed, by October 1, 1920." With these words on it, the schemer could not transfer the note to a third party and oust the maker's defense. In fact, no really innocent third party would take over such a note.

This plan of destroying negotiability offers perfect protection in every case where the maker of a note, for any reason, will be or might be better off if the note remains in the hands of the original holder. And, of course, the condition to be guarded against will suggest the words to be written on the note.

## MODEL CORDAGE WINDOW DISPLAY

For some time the advertising and sales department of the Columbian Rope Co. has been working on a model window display to be sent out to the trade, thoroughly worthy of Columbian Rope and a potent factor in advancing the sales and increasing the interest and knowledge of Columbian Cordage.

At last the window has been perfected and here it is, as set up in the factory and ready for distribution among the trade. The interesting diagram showing how Columbian rope is made and samples of the material that go into the making of the rope, the strands of rope showing the company's famous red, white and blue ribbon trade mark, are all there in the window.

This display is something so far out of the ordinary, so informing in nature, and so attractive and attracting, that we know there are few among our readers who will miss the opportunity of trying it in their window.

The making of cordage and the different uses of the rope are interesting and absorbing subjects about which the public has not been thoroughly informed, most suggestive subjects to work with. Here is a chance for the progressive merchant.

# A Match-A Scratch-And It's LIT!

## Quick to Light--"Sells on Sight"

Here are two "bright lights" that will show you the way to more sales.

Both are guaranteed to generate and light with a match—give radiant, pure white illumination equal to 20 ordinary coal-oil wick lanterns or lamps. Three pints of common gasoline (one filling) gives 15 hours' continuous light. Minus wick, chimney, smoke, smell, grease, dirt, trouble or danger. You can sell either to every farmer, ranchman, dairyman, poultryman, truck-gardener and hunter in all your neighborhood.

The new and wonderfully efficient generator fits lamp or lantern — lights quick and sure. It is the reason why "Nulite" Lanterns and Lamps give universal satisfaction

## "NULITE"
## Lanterns and Lamps

are selling at a record-breaking rate everywhere, because they are by far the best-looking, most durable, most simple lanterns and lamps ever introduced — made by a concern known as the leader in this line.

Stock these two articles. Be the first in your town, if possible, to display them. You will find that it will pay—and pay big. The profit margin is generous.

## AMERICAN RIFLEMEN MAKE NEW HIGH SCORES DURING 1920

The year 1920 has been a great year for record breaking high scores in the long range individual rifle matches. Many things have combined to make this possible. and one of the most important and necessary has been the improvement in powder and in the match ammunition put out by the different manufacturers.

When the call went out last spring for ammunition for the American Olympic Rifle Team, the various manufacturers made good so decisively that remarkably fine records were made in the try-out at Sea Girt. The winning lot put on a mean radius of 3.41 inches at 600 yards. Frankford Arsenal came across by using 170 grain bullets in all of their service ammunition for the national matches, and as it was well advertised in advance, riflemen all over the country knew that they would have ammunition that could be expected to give good results at long range, because all of the ammunition that would be furnished at the big matches would be loaded with heavy bullets and with great care.

One of the finest scores made was in the Catrow Cup Match at Camp Perry, which consisted of seven shots each at 800, 900 and 1000 yards. Mr. J. W. Hession made a possible score of 105 and 14 bullseyes over at 1000 yards, or a total of 21 bullseyes straight at 1000 yards.

The Governor's Cup Match, consisting of 10 shots each at 200, 600 and 1000 yards, was another contest where a new high score was hung up. Capt. Charles J. Van Amburgh, one of the most popular members of the force of the Small Arms Firing School, made a 49 at 200 yards rapid fire and possibles of 50 each at 600 and 1000 yards, giving him a total of 149 out of 150 points, and the trophy.

In the Adjutant General's Cup Match, Hession put on a new world's record score in competitive shooting at 1000 yards by making a possible score in the first stage at 900 and then adding a possible of 50 at 1000 yards, plus 21 additional bullseyes or a grand total of 31 consecutives at 1000 yards, this beating the previous record of 27 bullseyes at 1000 yards made by Col. C. B. Winder.

The Wimbledon Cup Match, which consisted of 20 shots at 1000 yards, was the most important individual long range match on the program. Riflemen all regard it as the long range championship of America and make great preparations for winning it. Very fortunately for the popularity of the match, any rifle, ammunition and sights are allowed to be used in competing in it, and as a result everyone who enters uses his pet combination and feels that he can do himself full justice.

This famous match had never before been won with a possible score of 100, but the long runs of consecutive bullseyes that were being made in previous matches gave everyone the hope that this year someone might be so fortunate as to turn the trick and make a possible score. or even better.

W. R. Stokes of the Washington, D. C., Civilian Team, a young rifleman of exceptional ability and one of the high men on this year's All American .22 Team, which defeated Great Britain in the International Match, shot in one of the early squads and made a possible score, plus one bullseye over, before he dropped for a 3. Many of the contestants thought that he was a sure winner, but Lieut. L. A. Yancy, one of the best shots in the navy, came across with the winning score by making 21 straight bulls before he dropped out for a 4. This score out-ranked the one made by Mr. Stokes and won the match. Both men shot special 180 grain ammunition loaded with the same Hercules Powder that won for the American Olympic Rifle Team at Antwerp.

One of the most important of the mixed range matches of the year is the President's Match. This contest consists of 20 shots rapid fire at 200 yards, 20 shots slow fire at 600, and 20 shots slow fire at 1000 yards. Lieut. Michael Fody, U. S. Cavalry, won the match with a total score of 296, six points above the previous record. In winning this match he made one of the most remarkable groups on record at 600 yards by placing his 20 shots in a group the size of a target spotter.

The Herrick Trophy Match, a team match that is shot over the Palma Course, consisting of two sighters and 15 shots for record at 800, 900 and 1000 yards, drew 48 team entries of 8 men each and resulted in a record-breaking score over the Palma Course. A team picked from the Civilian Team of Massachusetts captured this match with a score of 1735 out of 1800 points, beating the previous record by three points.

Among the many famous Sea Girt matches is a contest known as "The Swiss Miss and Out Match." Each competitor in it is allowed to fire at a 20 inch bull with a 16 inch counting center at 500 yards until he misses the bull. Last year a new record on this target was made by a contestant who scored 55 consecutive 5's. This year Sergt. Frank Ioerger, U. S. Infantry Team, scored 89 consecutive 5's, before he held a little too low, for a 4. Nothing on record has ever before come close to touching this shooting and it will doubtless stand for many years as a record for aspiring riflemen to shoot at. He also used Hercules powder in making this wonderful new record.

At Sea Girt are held the only 1200 yard matches that are staged in America. In addition to placing the targets so far from the shooters that the bullseyes look like pin heads, they cut down the size of the counting bull from 36 to 30 inches and as a result anyone who makes a long run of bulls in these competions feels that he is doing real shooting, as well as being well blessed with luck. A score of 74 out of 75 had been the record on this target for a great many years and it is very seldom that anyone comes close to equalling it, because of the extreme difficulty of making a good score on such a small target at this extreme range. However, this year Sergt. H. E. Stadie, U. S. Infantry, came very close to it with a score of 73. This means that he made 13 bullseyes and two 4's out of his 15 shots.

All of these remarkable season's records were made with ammunition that was loaded with Hercules powder, which helped to make the American Olympic Rifle Team victorious at Antwerp.

---

## A CHRISTMAS MAGNIFIED 52 TIMES

Surely the world is growing more sensible about Christmas giving. Shell boxes and plush albums are growing scarce because givers are growing wiser. It is wise giving only that pleases permanently. You cannot do a better thing for anyone, anywhere, at Christmas than to make a present of a year's subscription to The Youth's Companion. For 52 weeks it will delight a whole family—every age—all wholesome tastes.

Great serials, excellent short stories, editorials that father cannot equal elsewhere, family page, boy's page, girls' page and—well 52 crowded issues. You cannot do better for your friends or better for your money. And a beautiful Christmas gift folder to announce the gift, if you wish it.

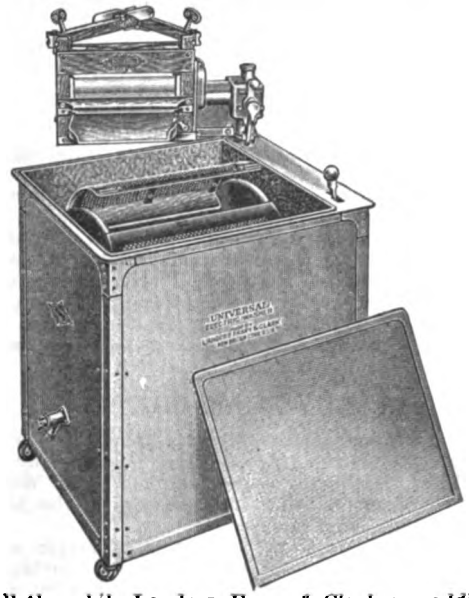
Still $2.50 for a year of 52 issues, but this price not guaranteed beyond January 1, next.

New subscribers for 1921 will receive:

1. The Youth's Companion—52 issues in 1921.
2. All remaining weekly 1920 issues.
3. The Companion Home Calendar for 1921.

All the above for $2.50.

4. McCall's Magazine for 1920, $1.50—the monthly fashion authority. Both publications for only $3.50.



THE YOUTH'S COMPANION
Commonwealth Ave. and St. Paul St., Boston, Mass.

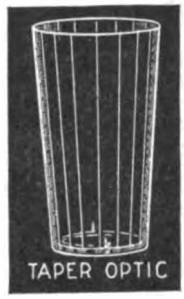
## UNIVERSAL ELECTRIC CLOTHES WASHER

All the while Landers, Frary & Clark are adding to the Universal line, making it more truly and thoroughly bear out its name, just as household hardware opportunities increase.

The latest member of the Universal family is the electric clothes washer illustrated herewith. Simple and rigid in construction and fully enclosed in a cabinet, it is said to be noiseless in its operation. The cylinder reverses every other revolution, combining the advantages of the revolving and oscillating principles. It is equipped with the latest improved safety features, applied to washer, wringer and motor.

In entering the electric clothes washer field, the company's main idea was to bring out a washer of superior mechanical construction, fully enclosed and suitable for the uses of the average housewife.



The resulting machine comes only after months and months of experimenting and trial, and combines the resources, genius and experience of Landers, Frary & Clark. Every machine will be thoroughly inspected, properly oiled and securely packed before leaving the factory. Therefore every machine can be guaranteed to the trade and to the consumer.

## NEW JUVENILE HANDCAR

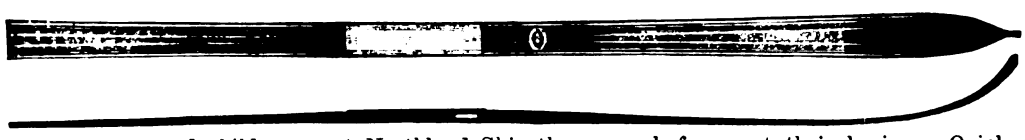
The new handcar for children, known as the Sammie Car, offered the trade by the Western Toy Company, Niles, Michigan, is represented in the West by the Lloyd Sales Co., with headquarters in the Monadnock Building, San Francisco.

It is built sturdily throughout, hard maple wheels, with brass bushings, and all steel axles provide easy motion. The finish is in red, white and blue, with a silk like luster finish.

The Sammie Car may also be used as a coaster at will, as the driving mechanism die engages and the wheel runs free. Indoors with the wheel running free, the car may be propelled by the feet like a walking car. Having three firm wheels to run on, the danger of tipping is slight and even a small child may with safety use the Sammie Car, in any of the three ways explained.

Circulars may be obtained from the company, if interested dealers will send them a request.

There are few things which cannot be accomplished by diligence and skill—as skill comes from diligence and diligence is simply a matter of doing, we have the power in our own hands.



## TEXT FOR A HAMMER SERMON

### Try This in Your Window

**The hammers we sell will pull a nail**
**With equal ease by the head or tail;**
**For the grip of the Claw will never fail**
**Whichever the end included.**
**In making tests we have often scored,**
**And many a record we have lowered**
**By pulling a nail through a two-inch board**
**When only the point protruded.**

**—REEG THE RYMER.**

**NORTHLAND SKI** (Pronounced Shee) **WILL BOOST YOUR WINTER SALES**

Digitized by Google

WHEN the good ship "CORLO" cleared from Boston for Calcutta ninety years ago, it was little realized that she carried with her the beginning of a great business that is so linked with historical romance as to have become a national institution, for COLT'S FIRE ARMS are known the world over.

NOW, Friend Salesman, we are not going to "advise" you on the best method of selling COLT'S FIREARMS—you know you own customers and have your own individual "line" of selling argument, else you wouldn't be the man behind the counter.

But, we believe you may be interested in a few of the "COLT POINTS" that we try to hammer home to the consumer in our National Advertising.

If a customer KNOWS the type of COLT he wants, you have little to do but wrap up that model and check off another sale. BUT as there are so many different COLTS, adapted for various uses, it is always a good point, when a customer is in doubt, to first find out for what purpose the undecided inquirer wishes to use the arm, and then save time by showing and explaining to him that particular model.

The more you know about COLTS and the better able you are to help the customer in his choice, the more confidence he will have in you and your judgment in future sales.

If a customer shows a decided tendency for an automatic pistol, remember that 90% of this type is sold for pocket, home or office use—the Caliber .25, .32 or .380 Hammerless, Pocket Models cover this field.

But remember also that the REVOLVER is still preferred by about 50% of buyers and carried by 90% of Police Officers, because of its simplicity. A little study of our catalog will show you a line of models that cover every possible use for this style of arm.

You can without mental reservation exhibit the COLT AUTOMATIC as the safest in the world. It cannot be fired unless held in the hand properly, because it is ALWAYS safe until the trigger is pulled.

Likewise the COLT REVOLVER is equipped with an automatic safety—the time tested Colt Positive Lock—which prevents absolutely any liability of accidental discharge.

Space will not permit our giving the many interesting features of COLTS, but we will gladly send you a little booklet that will tell the story of COLTS—a romance that you will find entertaining reading, with facts that will answer your customers' questions—a point that will show them YOU know COLTS from the ground up.

## MAKING DIRECT ADVERTISING EASY

Does direct mail advertising pay? If you put that question up to the retail hardware trade, the country over, you know what the answer would be. But if you followed that with the natural query, "Then why don't you do more of it?" you would get a surprising variety of replies. "No time to write letters." "Don't know just how to go at it." "Can't seem to get started." "Can't get my mind on it."

The Multigraph Retailer Equipment No. 3. Including No. 36 Multigraph Printer Senior, No. 39 Flexo-Typesetter, No. 22 Two-Roll Printing Ink Attachment, Stand, Stool, Assortment of Type, Ink, Type Cases, Ruling Lines, etc., and the Farrington Portfolio of Sales and Advertising Letters.

The American Multigraph Sales Company of Cleveland, Ohio, has given the trade the first satisfactory answer to this problem in the form of fifty well written circular letters, covering the leading lines of the average hardware store. The quality of the letters and their sales building appeal is assured by the fact that they were written by Frank Farrington, based on his intimate knowledge of retail trade conditions.

These letters are not being sold by the manufacturers of the Multigraph, but are included as part of the retailer's standard Multigraph equipment. The Multigraph with which these letters are supplied is a type designed particularly for retailer's use. It is equipped with a two-roll printing-ink attachment, and will print direct from type, so that the user can run his own folders, flyers, bundle inserts, envelope enclosures and so on, and do his own printing at low cost. The letters can either be printed direct from type, or through a ribbon, with characteristic Multigraph speed and economy in either case.

The part of the work of printing that is considered most difficult and tedious—that of setting the type—is made easy by the Flexo-Typesetter, which is included as part of the Multigraph retail equipment.

## THE HEAVENLY ORCHARD

Aunt Callie was a very religious negro woman—of the shouting variety. She was telling the white children whom she nursed about heaven, and what she expected to do when she got there. "When I gits dar, honeys, I gwine take a crown what an angel gwine gimme, an' put it on my haid. Den I gwine git out my lil' old hahp an' play some of dem heben chunes on it. Den I gwine stretch my lil' white wings an' fly fum cherry beam to cherry beam."

## INTRODUCE STEAM PRESSURE COOKING

It will well repay hardware and household goods merchants to interest housewives everywhere in cooking by steam under pressure. Thousands of them have already adopted it. More are adopting it daily.

To meet this great and growing demand, the Northwestern Steel and Iron Works, Eau Claire, Wis., for over a year has been manufacturing and placing on the market the National Aluminum Steam Pressure Cooker.

With the National in use, cheaper and tougher cuts of meat can be advantageously utilized. New, tasty, flavory deliciousness is brought out during the rapid steam pressure cooking process. Meat juices are not allowed to evaporate, or become weakened in flavor.

National Aluminum Steam Pressure Cookers are being nationally advertised in such magazines as the Ladies' Home Journal, The Country Gentleman, Good Housekeeping, Literary Digest, The Modern Priscilla, and many others.

They are handled by progressive jobbers everywhere.

## SPARK COAL AND WOOD HEATERS

Hammer-Bray Co., of Oakland, are announcing elsewhere in this issue the Spark Combination Coal and Wood Heater, which should be especially appropriate at this time of the year. It is a fast seller and an attractive proposition to every stove merchant among our readers. It is fitted with cast linings, duplex grates and ash pan, and is made in two sizes to take 18-inch and 21-inch wood. Hammer-Bray Company make a complete line of both wood and gas ranges, as well as other household goods.

As the time goes on the summer merchant will want to be prepared to supply the refrigerator demands of his customers, and he will find the Spark Iceless Cooler an attractive item. The cooler is especially fitted for "greater capacity needs," such as creameries, railroad and lumber camps, hotels, groceries and fruit stores. A wide-awake merchant can do a big business next summer in harthering the sale of these coolers.

## SAN FRANCISCO FURNITURE EXCHANGE

Members of the far western trade and our many readers who handle furniture in connection with their hardware and general merchandise stock will be interested in the announcement that a great furniture exchange is being built in San Francisco, rivaling the Manufacturers' Exhibition Building at Chicago and the International Housefurnishing Exchange in New York.

An eight story and basement building on a lot 160 by 140 feet is being constructed on the corner of New Montgomery and Howard Streets. This is near the center of the San Francisco hotel and business district, and there will be 200,000 square feet of floor space available for displaly. The new exchange will not open for another year, but already two-thirds of the display space has been engaged. Every factory in the present exchange at 1055 Market Street has signified its intention of displaying in the new building.

## ODE TO THE PLAYER PIANO

Thou playest with regularity,
Thou keepest perfect time,
Thou playest all the tunes thou knowest
And it doesn't cost a dime.

Thy notes fly up and down the scale,
Thou never stopst for breath;
But I suppose the same old tunes
Will worry us to death.

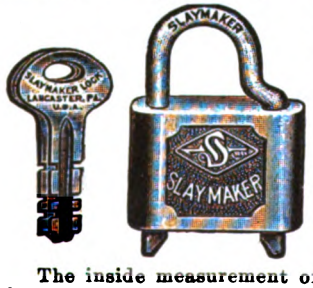
## SLAYMAKER LOCKS AND THEIR MAKERS

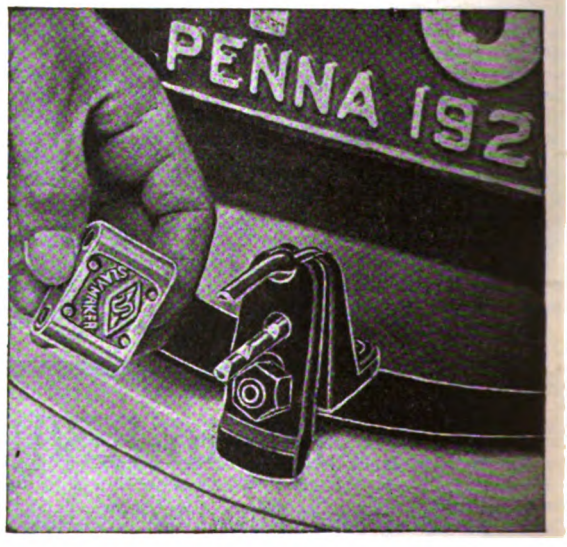
**In line with our policy of bringing more closely to the knowledge of the hardware trade the home environment and particular advantages of various items of their stock, we are glad to publish this month a view of the Slaymaker Lock Co.'s factory, at Lancaster, Pennsylvania.**

**We may venture to say that there is hardly one among our readers who cannot visualize the box in which various locks are packed or the counter display cards, containing an assortment of padlocks, yet probably few men in the trade have realized the extent of the factory where these padlocks are made.**

The Slaymaker Lock Co. manufacture padlocks in all sizes and grades and for all uses: Locker locks, cabinet locks, automobile locks, rim locks, better grade pin tumbler locks, secure lever locks, various kinds of railroad locks, and bicycle locks.



The business was started in 1888, and products of the factory go to practically all countries in the world, to which American goods are exported. The company has connections in Havana, Cuba; Rio de Janerio, Brazil; Buenos Aires, Argentine; London, England; Brussels, Belgium; Copenhagen, Denmark, and Christchurch, New Zealand.



The factory is equipped with special machinery, and is said to be one of the four largest padlock factories in the world. It is today under the active management of the original founder, S. R. Slaymaker, president and general manager; assisting him are W. Heyward Smith, assistant general manager, J. T. McGovern, Jr., administration officer; S. C. Slaymaker, secretary; E. Stehman, treasurer; George M. Miller, factory manager.

Representing the Slaymaker Lock Co. in the West is A. C. Riddell, with offices in the Higgins Building, Los Angeles, and in San Francisco.

### Number 1098 Winning Friends

While on the subject of Slaymaker locks, we cannot avoid mention of the phenomenal success and reception which the new No. 1098 has received in the West, particularly among accessory buyers. The lock, illustrated herewith, is especially made for automobile tire carriers and securely locks the extra tire to the rear of the automobile. It is hailed as the Universal Tire Carrier Lock and can be adjusted to any car, being particularly suited to Ford sedans, Haynes, Hupmobile, Maxwell, Dort, Nash, and Oldsmobile.

No. 1098 in Service

**The inside measurement of the shackle is ⅞ of an inch. It is adjustable to 1½ inches, insuring a perfect fit of the lock on the tire-carrier. Diameter of shackle is ¼ of an inch. The case is of heavy, cast brass, polished and the shackle is a formed nickeled steel rod.**

---

## BONE CUTTERS FOR POULTRYMEN

**Every poultry raiser in your community is a prospect for a Stearns green bone, meat and vegetable cutter. It will well repay merchants to send for a catalogue and become acquainted with the dealer's proposition of E. C. Stearns & Co., Syracuse, New York.**

**The great factories of the company are solely devoted to the production of bone cutters. Bone machines are either operated by hand or power, and range from a small machine, weighing 26 pounds, to their large machine, weighing 215 pounds, taking two men to operate. The Stearn cutter is said to be the only machine which employs a solid drop forged hardened steel cutter head, which mills the bone rather than cutting it.**

---

**J. H. Voss is the successor to the business of Voss Bros, at Cawker City, Kansas.**

## REAL WORTH

**It is not what you pay, but what you get, that makes economy and guarantees satisfaction.**

**When you use Dixon's Silica-Graphite Paint, you get service for your money, which pleases and pays.**

**You pay the full price for a good bond or share of stock, based on the steady, guaranteed interest. A cheap stock, bolstered by a fictitious interest payment for one or two years, is a trap, and not a good investment.**

**A flashy ring sold as gold for $2.00 is a fraud on its price. If you buy a Tiffany gold ring and pay $30.00, it will give you $30.00 worth of wear and satisfaction.**

**Some paints cost less per gallon than Dixon's, but Dixon's gives "Tiffany Service," to use our illustration above.**

# A Novel Christmas Suggestion

## The New Cutlery Steel

### "NEITHER RUSTS, STAINS OR TARNISHES"

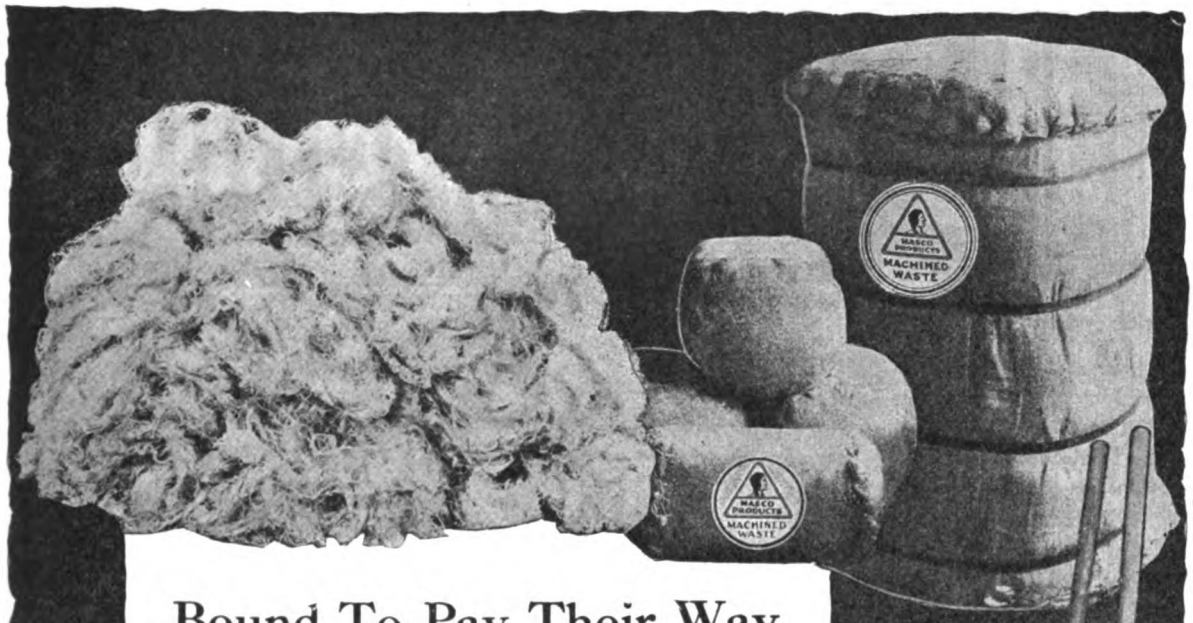
At its name suggests, Stainless is an alloy steel that does not rust, and is immune to the effects of certain acids found in food.

At a time when the "maid" problem has reached such an acute stage, it is only natural to look for the materials and appliances which tend to reduce to a minimum work in the household.

A plated knife is only an imperfect expedient for, while it saves frequent cleaning, it cannot be sharpened properly.

Stainless does away with frequent scouring, so necessary with ordinary steel knives, and it can be sharpened to a keen edge.

INCIDENTALLY STAINLESS SHOULD BE THE MEANS WHEREBY SOME OF THE TRADE NOW GOING TO THE DEPARTMENT AND JEWELRY STORES, CAN BE BROUGHT BACK TO THE CUTLERY AND HARDWARE ESTABLISHMENTS.



Stainless cutlery is "made in America" by the following companies:

American Cutlery Company.....Chicago, Illinois
Clement Manufacturing Co.....Northampton, Mass.
Failor-Martin Corporation.....Bloomfield, New Jersey
Lamson & Goodnow Mfg. Co.....Shelburne Falls, Mass.
Landers, Frary & Clark.....New Britain, Connecticut
International Silver Co. (Rogers 1847)..Meriden, Connecticut
John Russell Cutlery Company.....Turners Falls, Mass.
Northampton Cutlery Company.....Northampton, Mass.
Shelton Tool & Machine Co.....Derby, Connecticut
R. Wallace & Sons Mfg. Co.....Wallingford, Connecticut
Wm. A. Rogers, Limited.....Niagara Falls, New York
Washington Cutlery Co.....Watertown, Wisconsin

## ARE YOU FOR BUSINESS PREPAREDNESS?

Quite a change is coming ere long over the face of the world, and he is a wise plumber who recognizes the fact and prepares accordingly.

If you are a working plumber and not a merchandiser you have a simple question before you, and the prospect is a pleasing one. The preparation required of you is easy and inexpensive.

A million houses must be built in the cities and towns of our land, and every house will call for plumbing work on a scale heretofore unknown. The "order of the day" calls for hot water heat, complete bath and toilet rooms and sanitary plumbing throughout.

In addition the old houses must be modernized and this will spell a most pleasing amount of business.

The only preparation required of a plumber for this is to have an ever-growing regard for his customers' feelings. The rush and hurry of the past two or three years will slow down, the pace will become normal, competition will appear, house owners will grow more exacting, they will even have the courage to dicker on the price. And if they are not entirely satisfied they will be able to go to another plumber and give him the work.

Now is the time, therefore, to re-establish your reputation for Good Service among your customers. This is the sort of preparation which will stand you in good stead against the day of less speed.

If, in addition to being a plumber you are also a distributor of merchandise, then it behooves you to even more closely "watch the step" of the world.

To be sure there is yet a shortage of merchandise and the demand is exceeding the supply. But this condition is going to right itself sooner than the most of us anticipate. Slowly and gradually the production will creep up on consumption, and before we are aware of it there will be a slight excess of everything. Price then will recede, and the old-time conditions will prevail.

Therefore the real wise and prudent merchandiser will begin to exercise care and caution in his purchases. He will refrain from buying large quantities of anything. He will begin to closely scrutinize qualities in all the goods he purchases, and he will post himself thoroughly on prices and not order without regard to the cost.

It is very pleasing to have a store full of goods bought on a rising market, but it pushes the ends of the mouth downward to be heavily stocked on merchandise bought at the peak of high prices.

The time begins to draw near when it is better to buy small quantities frequently, rather than place large orders.

---

## IT CAN'T BE DONE

Statistics show that a very large per cent of the fatalities in business are due to the fact that merchants with limited capital are endeavoring to finance the affairs of their customers. That is to say, probably 85 per cent of the merchants who fail in business undertake to carry the accounts of too many of their customers for too long a time.

It can't be done.

---

Give people what they need and what they ought to have. Show them why they need these things and the reason that possession would be an advantage. Then you will have no trouble selling your goods or service.

---

If you don't like your job, get one that you do like. People who find business a game of all-absorbing interest are the ones who travel farthest and amount to most.

---

"Sometimes failure develops a man quicker than success would."

---

## BUCK UP AND HUSTLE

Don't admit that you are licked 'til you are.
And don't acknowledge it even then.
In spite of the jolt and jar,
Just get up and try it again.

Keep a-smashing and slashing along,
On the line you know to be right,
With your heart full of song,
And your nerve going strong,
And you'll win every battle you fight.

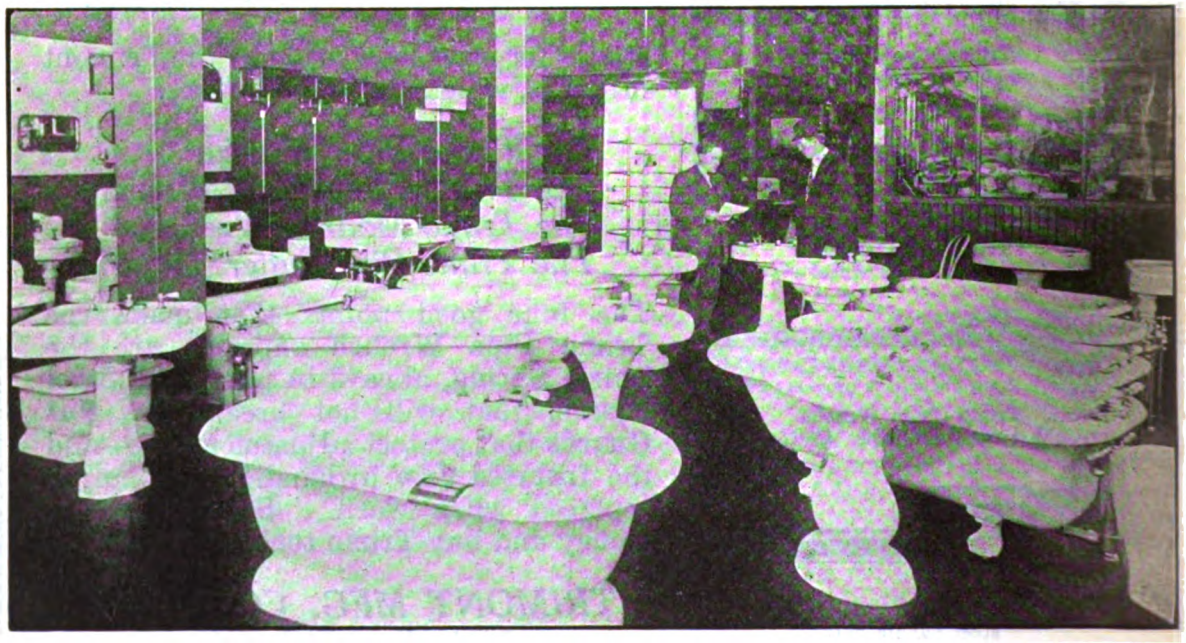
## PLUMBING INCREASES THE VALUE OF A BUILDING

The intelligent real estate dealer is aware that a system of plumbing increases the value of the building far beyond the actual cost of the plumbing system. The hotel manager is able to charge from fifty cents to a dollar a day more for a room with sanitary conveniences. Running water in hotels is now considered a necessary adjunct by the traveling public. The plumbing system in a hotel not only adds to the comfort, convenience and health of the patrons, but is a source of revenue, which brings large returns for the owner.

### Housewife Owes a Debt of Gratitude

The housewife of this country owes a debt of gratitude to the plumbing business because of the progress and measures adopted to lighten the labor of housework. Cooking, washing and the removal of the body and domestic wastes, formerly drudgery, are now simplified by sanitary conveniences.

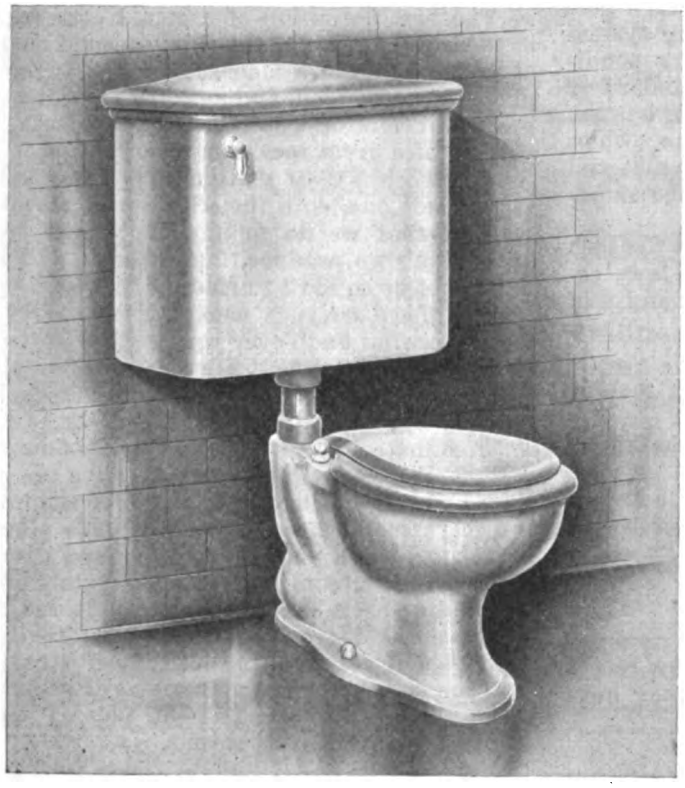
Formerly water had to be pumped or lifted and carried from the well, cistern or spring for drinking, cooking, laundry, bathing and other household purposes, and the wastes had to be carried and emptied. The water was often of questionable quality. The method and place of waste disposal in nine out of ten cases resulted in a nuisance. The back yard privy located at the greatest distance from the house to remove the possible odors in summer, added to the discomfort and inconvenience and the possibilities of added difficulties and irregularities in bad weather.



Go back thirty years or even twenty years and compare women's work then and today, and it will be found that most of the drudgery existing has been eliminated by the plumbing system. Hot and cold water for drinking, bathing and domestic purposes is conveniently arranged for use in the laundry, kitchen, bath and bed-rooms. Domestic and body wastes are swiftly and safely removed from the immediate premises by the drainage system. Labor has been reduced, comfort and conveniences added and personal cleanliness simplified, pure water supplied, foul odors, unhealthful conditions and the elements favorable to the origin and development of disease have been removed.

### Low First Cost of Plumbing False Economy

Low first cost of plumbing installation is mistaken economy. A second-class plumbing and drainage system in cost will prove itself a second-class system in service. It costs as much to install and in a year or so in service will reveal the inefficiency of the fixture, device or construction. Discomfort, inconvenience, cost of repairs, foul odors, insanitary and unhealthful conditions are the resulting penalties, which the occupant must pay.



### Sanitary Plumbing Better Than Medicine

Sanitary plumbing is of more real value than medicine. Plumbing provides means for keeping the body, wearing apparel, the house and our streets and alleys clean. Cleanliness means healthfulness. A plumbing system stands for cleanliness, which also means that the plumbing system prevents where medicine cures, and prevention is more desirable than the cure.

**A neat display room is a splendid asset to any plumber, and no line of merchandise adapts itself to making an attractive display so well as plumbing equipment.**

"Always Reliable" Torches, Furnaces, Braziers and Plumbers' Tools

Digitized by Google

Investigation has shown that in the absence of sanitary regulations and whenever each person is permitted to install a plumbing system according to his own ideas, insanitary conditions are sure to prevail. Shall the standard of plumbing regulations be determined by the person who lives in the house, by the owner, the manager, real estate speculator, material manufacturer or in conformity with the standard of living and decency?

A great many people still cling to the idea that plumbing codes are created and laws enacted for the sole benefit of plumbers and that the public is made their legalized prey.

---

He who knows not and knows not that he knows not, is a fool. Avoid him.

He who know not and knows that he knows not, will learn. Teach him.

He who knows and knows not that he knows, is afraid. Encourage him.

He who knows and knows that he knows, is a wise man. Follow him.

---

If you can learn nothing from the men you meet, it is because you don't know how to get at what they know. It isn't that they have nothing to teach you.

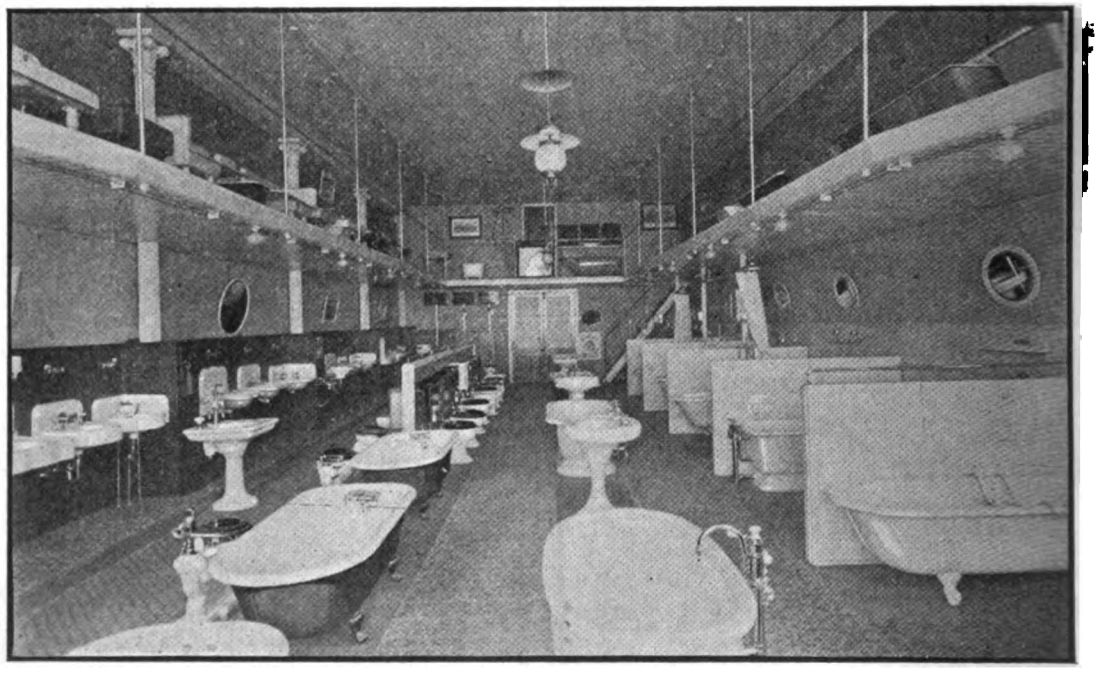
---

"What did you stop that clock in your room for, Jane?" "Because, mum, the plaguey thing has some sort of a fit every mornin,' mum, just when I wants to sleep."

## A REAL MAN

The best definition of a man I ever read is in the second verse of the thirty-second chapter of Isaiah: "And a man shall be as an hiding place from the wind, and a covert from the tempest; as rivers of water in a dry place, as the shadow of a great rock in a weary land."

The world's most important product is men. If we made one-tenth the effort to improve this product that we do to improve almost every other thing we produce, the real man of Isaiah might not be so hard to find.



But there are such men, men who hide you from the wind and cover you from the tempest, men who are as rivers of water in a dry place, men who are the shadow of a great rock in a weary land.

Fortunate indeed are they who know such men, doubly fortunate those who have the privilege of being much with them. The shadow of a great rock in a weary land! Some place to creep into when you are footsore and discouraged from tramping over the hot sands of the weary places. A shadow that enfolds and comforts you and from which you go forth refreshed and ready for life's further struggles.

I am sure there are many men of the Isaiah stamp among our readers—it pleases me to think of many more than one.

---

What you put into your head is very important. What you deliver out of your head is still more important.

Here is the way an enterprising western plumber keeps his display room. It always presents a neat and inviting appearance, and he regards it as one of the best business bringing methods he can possibly employ. It is time well spent to keep it in this manner.

## CHRISTMAS GEWGAWS AND JIMCRACKS

(By Harry Gale Nye)

A guy who starts in to criticise Christmas has a job on his hands that will make him as popular as a strange dog hanging around a picnic lunch. He will have as many friends as a man who goes around giving advice to his married neighbors.

Christmas as an institution has a foundation resting upon the human heart and a superstructure fabricated out of the songs of angels and the laughter of children—which are about one and the same thing.

**But—**

(Did you ever notice whenever there is a good thing some fellow butts in with a "but" and tries to jimmy it? But that is not the purpose of this, not by a long shot.)

But I wonder sometimes if we haven't wandered some distance away from the-shepherds-watched-their-flocks-by-night and peace-on-earth-good-will-to-men and gone chasing off after gewgaws and jimcracks. It won't be very long before the Christmas shoppers will be spending a million dollars a day on State Street, and a few millions on Fifth Avenue, Broad Street and elsewhere.

They may be short on shoes but the ormulu stuff must be had at this season of the year, and, if you don't give away a lot of hand-painted pipe-racks and silver-plated nutcrackers, you're considered a piker—if not by your friends at least by yourself.

Now, I like to see people spend their money—especially when they spend it with me. I suppose if it were pipe dies we gave each other at Christmas instead of pipe-racks, I'd think it was the grandest idea in the world. But it isn't; so I am here to argue against the blowing of so much wealth at Christmas on gewgaws and jimcracks.

**The Obsolescent "Remembrance"**

No, my stomach is all right, and business has been good and none of my relatives are in jail that I know of. I haven't a grouch or a sore thumb—but—well, they talk about the obsolescence of an automobile, and how it loses fifty per cent as soon as you drive it out of the agency. But for real obsolescence, for a record, the ordinary Christmas junk is batting around .899.

Where are the necktie holders of yesterday? What has become of last year's hand-embroidered coat-hanger? They are down in the cellar stuffing up the hole where the cat used to come in. The bargain basement hairbrush has molted and the cheap chair has the rickets. The gewgaws and jimcracks that were to be constant reminders of and from our loved ones remind us only when we fall over them in the dark or rake up the yard in the spring.

Of course the doll has come apart and the toy derrick doesn't work any more, but that is an entirely different matter. If the doll made the girlie smile once when she saw it Christmas morn or the derrick pulled even one "geewhillikens" out of the boy, it was a good investment. That is what Christmas is—a kid's institution. It ought to mean enough to us without a lot of the stuff we get—and it wouldn't mean anything at all to the kids without what they get.

**Or Buy Mother a New Sink**

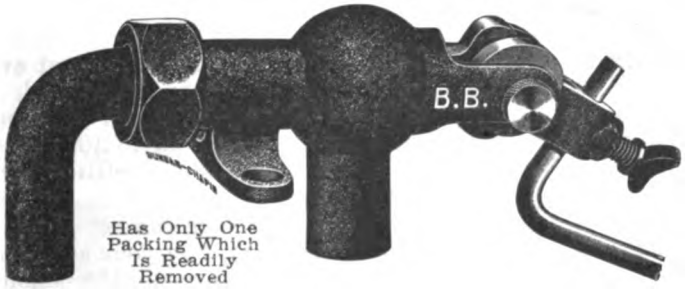
If we big folks, though, are going to trade presents, let's buy a few with care, and good. Let's be sure that it's what the other fellow wants and needs. Generally we give the other fellow what we want. Why, there is many a thing I have wanted for myself for years that I have given away regularly every Christmas! I don't suppose I ever will be lucky enough to have one myself—and probably the other fellow is wondering what the dickens to do with the one I gave him.

And now I come up to the text and moral and all that sort of thing. We people who make and sell useful things have both a duty and an opportunity. Let's get some of this hundred million dollars a day of loose change that is floating around at Christmas time. It will be a public benefit and incidentally yield a private profit.

Let's use our advertising space at Christmas time the same as the department store does. Let's suggest some convenience for the bathroom or labor-savers for the kitchen. Let's suggest that we buy mother a new sink. It will cheer her heart more and longer than anything you can find in a holly box. Perhaps the family would be willing to pool the Christmas money (except what is needed for the kids) on a new bathtub or something.

There is no reason why the plumber shouldn't cut in and get a slice of the Christmas pudding; and in the long run, it will benefit the ultimate consumer a lot more than a box of cigars he can't smoke or a flock of peacock-colored neckties that he can't wear.

---



## SOUNDS THE SAME, ANYWAY

"Does your wife pay you any compliments?" asked Frederick Jimson, a Milwaukee dealer, of his friend, Benderly. "Never," replied Benderly. "Well, mine does; she flatters me." "Often?" "Oh, yes, frequently—particularly in winter," replied Frederick. "Why does she flatter you so much in winter?" "Whenever the coal fire needs replenishing she points to the fireplace and says, 'Frederick the grate.'"

# Your Business Figures

(By Frank Farrington)

HOW do you know how much profit to mark up on a bathtub?

Do you make the price on a basis of all the traffic will bear, or on a basis of what competitors are charging, or do you figure what it is going to cost you to sell that bathtub and add that cost to the wholesale price and then make an additional allowance for the net profit you must get?

I have found many business men who do not know what their percentage cost of doing business is, and there are a good many plumbers who do not know just how to get at that figure. Of course, you divide the total expenses of the business by the gross receipts to get that percentage expense.

On this basis, if you are doing a $10,000 business, with total expenses of $2500 for the year, your percentage expense is 25 per cent. That is, it costs you 25 per cent of your receipts for expenses before there is anything left for you, though your own salary, which you should estimate at a fair and fixed sum, ought to go into the expense account. Where your receipts are mainly for labor, with a small proportion of actual goods and supplies sold, the expenses will naturally run to a much larger proportion of receipts than in the case of business more nearly a merchandising proposition.

### Keep Such Separate

As a matter of fact, good judgment would dictate the wisdom of keeping the merchandising and labor parts of your business separate from one another, and it is with the merchandising phase that we are concerned in this discussion. It is important for the plumber to know whether he is making a profit on what he sells, and he needs to know how much he is making and how to find out about it. You will find the study of the figures of your business interesting, and certainly it is of vital importance to your success.

### Important to Know

Among other things, you need to know how to find what percentage of your cost of goods your selling expense is. Well, if your expenses are 25 per cent of your receipts and your receipts are $10,000, your expenses are, as I put them, $2500. Take the expenses from the receipts and you have $7500 left, which might be the cost of your goods, assuming you have no net profit above the expense item. Divide the expense sum by the cost of the goods, $7500, and you get 33 1-3 per cent as relation of your expenses to the cost of goods.

If you know, then, that to sell your goods will cost you a sum equal to a third of their cost, you know how much to add to their cost to cover your expenses. If the bathtub costs you $27, you must add $9 in order to get out even. You must add to the $36, thus estimated, the profit you want as a net return on your business, and that ought to amount to 10 per cent of the gross receipts, unless competition forces it below that figure.

Let us figure on this with the net profit included. That means, then, that your cost of doing business, together with net profit, amounts to 35 per cent of the receipts. That percentage of $10,000 is $3500. If you get this much gross profit, it leaves $6500 as cost of goods; $3500 is 53.8 per cent of the $6500 cost of goods. This tells you that to the cost of the bathtub ($27) you must add 53.8 per cent of that cost to cover your cost of doing business and your net profit. That makes the price about $41.50. You get 53.8 per cent of $27 by multiplying the two numbers, of course, remembering in multiplying that th 53.8 should, for that purpose, be regarded as all to the right of the decimal point—.538.

These figures are not intended to be representative, but are taken arbitrarily for the purposes of making the illustration concrete.

It is simple enough to substract the cost of a heater or bathtub from the selling price and find out what the gross profit on that item is, and you can divide that gross profit by the selling price and you will know what percentage of the price is gross profit, but that information is of little value. It does not go far enough.

### Get Costs From Inventory

In order to have a reliable figure representing the percentage expense of the whole business, you must know the cost of the goods you have sold during a certain representative period. To find the cost of the goods you have sold during the year, take the total purchases of stock as shown by the year's invoices. If the inventory at the end of the year is larger than at the beginning, subtract this increase in inventory from the total purchases. If the inventory at the end of the year is smaller, add that decrease to the total purchases. That gives you the cost of what you have sold during the year.

Thus you have the cost of goods sold for a starting point in your figures. By subtracting this from the gross receipts you can get your gross profit (by making proper allowances for book accounts). By adding to the cost of goods sold the total year's expenses and subtracting the sum from the gross receipts, you get your net profit for the year.

To find out what percentage of your receipts your cost of goods is, or your gross or your net profit, or your expenses, divide any of those

Nye Solid Die

Digitized by Google

respective sums by the gross receipts, or sales.

Any of these percentages of gross receipts may be used to enable you to find what percentage of your cost of goods they would be. To find out what your gross profit percentage, for example, figures when changed into percentage of cost instead of percentage of selling figures, use this method: Find the actual gross profit by multiplying the gross sales by the gross profit percentage. Subtract the sum thus obtained from the gross sales and divide the actual gross profit by this remainder. Thus: Your sales are perhaps $12,000. You have discovered by previous figures that your gross profit is 33 1-3 per cent of the sales; 33 1-3 per cent of $12,000 is found to be $4000. Subtract the $4000 from the $12,000 and you have $8000 as the cost of the goods. Divide the $4000 by the $8000 and you get 50 per cent, which shows that your gross profit is 50 per cent of the purchase price.

In making up a set of business figures for comparative purposes, for comparing this year's business with last year's, or for comparing with the business figures of someone else's business, it is important that the same basis be used all the way through in both sets. That is, all percentages should be based on either cost or selling prices. To compare percentages in your business figured on sales, with percentages in some other business figured on wholesale costs would mean nothing.

**Figure Cost of Doing Business on Selling Price**

The proper way to figure cost of doing business and other percentages is upon selling prices. This is the usual way and the one generally followed unless stated to the contrary. And the cost of doing business ought always to include the proprietor's salary, interest on investment, losses through unpaid accounts, etc.

Business accounting has something about it that scares out many plumbers. Some men hate to dig into the figures of their business for fear of what they will find out, and that is just like being afraid to have the doctor examine you for fear he may find something the matter, or like not having an automobile engine inspected for fear there is something wrong with it.

You need to know what you have done during the year of business in order to know whether and how to continue. You ought to be able to figure each department of the business separately so you can determine whether you have some line of work or stock that is not paying its way. The modern farmer keeps track of the output of each cow, and when he finds one that is only a boarder, he gets rid of her. You want to get rid of any line that is just a boarder. You ought to be as good a business man as the farmer.

In order to reduce percentages to actual sums in your own business, from the cash receipts of the year subtract the total payments for goods. This gives what may be roughly called the gross profits. From the gross profits subtract the total expenses, and you will have the net profits, if any. Of course, these figures are subject to changes in the inventory. If the inventory shows a gain, you have something to add to the profits. Add to the gross profits figure any increase in inventory, and likewise subtract any inventory decreases.

**When You Need Figures**

You may be satisfied to go along without keeping any accurate business figures. You may be making a living and perhaps increasing your stock on hand. You may be morally certain of this and you may have plenty of money, but moral certainties cut very little ice when you want to sell your business or when you have to settle with the fire insurance company. Only actual business figures count in such instances, figures based on inventories, invoices and sales sheets.

The buyer of a business is going to insist upon seeing just what you have done and how you have done it. He will want to see your bank book and he may inquire about items that lead him to suspect a padding of the sales. The fact that you have had a living and have laid up some money as you went along means nothing unless you can show that the money came from the business.

In figuring your expenses don't neglect to put in rent because you own your building. Some men reason that rent costs them nothing because they use their own building. That is a mistake, and there ought to appear in the expenses the items that correspond to rent, such as taxes, upkeep, depreciation, insurance, water rent, etc. The income tax requirements are opening men's eyes to these things. You cannot keep $5000 or more invested in the building you use and figure no return from that investment without taking a loss you forget about. That $5000 would bring you 4 per cent in a savings bank.

**Get All the Expenses In**

Now and then there is a plumber who makes too small allowance in his expense account for help because members of his family help run the business and do not draw actual wages from him. When you leave out such items you may fool yourself, but you cannot in that way fool your banker when you get into a tight place. Get all the expenses in and allow for them in making your prices on work and goods and supplies.

You need to know your net return because if your business does not pay you a suitable net profit over and above your salary allowance you might better be working for some one else with your investment where it will at least bring savings bank return, while you let somebody beside yourself take the risks and do the worrying.

There are losses on depreciated stock that are not always taken as they should be because

Digitized by Google

the stock is not often inspected. There is depreciation in tools and equipment which is not obvious because the outfit remains in use and apparently is efficient enough, but some day there comes a breakdown and the depreciation, if not previously taken bit by bit, comes in a lump and the business makes a poor showing on that account. When it comes to insurance or to selling the business you will find the other fellow will take account of depreciation in equipment, even if you have neglected to do that yourself.

Figuring depreciation on equipment annually distributes necessary losses over such a period that they do not deceive you into thinking you are worth more than you are. Even if you think this makes no difference to you, it will make a difference when you die or retire from business.

**Banker Wants Real Accounts**

When it comes to borrowing money at the bank, the modern banker insists upon knowing what your business is doing. If you have little or no obvious assets, the banker is sure to want to know all about the figures of your business, percentages and actual amounts. If you have a large amount of tangible assets and still want to borrow, the banker then may be suspicious that there is something he does not understand. You will have to be able to show figures anyway.

You cannot know what you are doing unless you have your business figures down in black and white, and you cannot show any one else what you are doing unless you have the figures. Bankers, prospective purchasers of the business, insurance men, and, in the end, the executors of your estate, all want figures, not guesses. The actual standing you hold in the financial world around you is based not on what you think you have been doing, but on what you have actually done and can prove by figures that you have done.

Cut out the guesswork and get down to arithmetic. You will probably get your own eyes opened. Your business figures, when you make them for the first time, will contain some surprises for you.

**TURNER New Gasoline - Kerosene Torches**

The Burners are all constructed alike, containing all the patent features, however different in size according to price. The baffle in the burner will generate the low grade gasoline or kerosene without adjustment. The adjusting needle eliminates enlarging of orifices that make all burners useless. The flared tube will siphon the correct amount of air regardless of adjustment or size of flame. The patent pump involves the parachute principle. Leather is free and will not wear. Drip cup made of sheet steel stamped, copper plated. Burner generates easily and produces more heat on less fuel than our old line. Our Triple Jet takes the place of our well known Double Jet, involving all the new patent features. A trial order will convince you. If not satisfactory, money refunded. All parts interchangeable. Jobbers will carry repairs—not necessary to be without torch—fix it yourself. With ordinary use a torch will last a life time.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

**FOR SALE**
A complete line of hardware, building material, plumbing goods, lumber, etc. The same will invoice about $25,000. Located in a thriving and growing community of about 10,000 people and doing a business of about $80,000 per year. Located fifty miles from railroad—therefore able to make good profits. Reason for selling is, owner wishes to retire from business. Terms: one half down, balance on time to suit purchaser. Address L. A. H. Co., care HARDWARE WORLD.

**FOR SALE CHEAP**
**50,000 prs. 2x2 and 2½x2½ tight pin sheradized steel butts; 60,000 4½-in. Hinge Hasps. Union Steel Spec. Co., 5605 Wayne, Chicago.**

**COMMISSION MEN! LIVE WIRES!**
Prepare now for big earnings during 1921.
We want live, honest, conscientious commission men in every state—
WORKERS
Big commissions and full credit on all repeats. Exclusive territory on big selling, well advertised specialties. $20 to $75 per day can, and is being earned. Workers only. References necessary. Capital not necessary. Reliability insisted on. Address C. C. G., care HARDWARE WORLD.

**FOR SALE**
Good clean stock of Hardware, Implements and Plumbing goods. Invoice about $6500.00. Excellent farming and fruit country to draw from. Center of prune district. This is a good going business; stock was turned over four times last year. Address Riddle Hardware Company, Riddle, Oregon.

Beware of the would-be Auto-Solomon, my son; the man whose advice is as free as the Flu, as light as thistledown, and as valueless as a last year bird's nest.

When an engine dies on a busy street crossing, the autoist goes into mourning, and the traffic officer looks grave, but the words used are not always fitting for a funeral service.

# More Miles—Less Skid

## Two Minute Chats With Converse Dealers—

### *No. 2—"right off the bat"—*

Here's a question put up to Wescott & Burke, Plainfield, N. J., Converse dealers—"Did you ever notice anything interesting about the way Converse sales are made?"

"Only this," was the answer. "Folks often come in here and simply ask for a tire. Then they notice that rugged, ebony-black, Converse Cord mounted on a show rim—it stands out. Then they buy one with a 'guess-I'll-try-it' expression. But!—

"The next time those folks come in they ask for Converse Tires right off the bat—good stiff evidence of Converse performance."

Converse Tires are a step forward in tire appearance and tire efficiency. Get Converse facts—get acquainted with the Converse dealer proposition. You'll find the Converse Company a-thoroughly-comfortable-house-to-do business-with.

Why not find out? Write today for "Dividends for Dealers"—A Story with a Wallop. It's interesting—the story of Converse dealer profits.
